Problem 1:
What is Printed?

- 3.142
- `< 3>`
- `a`
- Hello World aBcDeF
- My age is 3 and I know 3 digits of pi: 3.142

Problem 2:
Create the code!

```java
System.out.printf("%d%n", i);
System.out.printf("%.3f%n", d0);
System.out.printf("%c%c%n", c, c1);
System.out.printf("%s%n", myString);
System.out.printf("%.2f%!n", d1);
System.out.printf("%f,%d,%s%n", d0, i, s);
```

Since `%f` does not specify how many places after the decimal, `printf` defaults to 6 places!
