- Group work tips
- SVN
- Assignment 2

# Group Work Tips

How do we divide up the work?

What if I feel I am a weak programmer?

I'm not getting along with my partner...

# What is Subversion?

Subversion is a **version control system** first initiated in 2000 by CollabNet Inc.

Many programmers use it, including various research groups in the computer science department

# What will you use it for?

Each group has a folder in the `~cs200` directory

Only your group can access your folder!

Create a subversion repository in that folder.

# SVN - Subversion

[www.cs.colostate.edu/~cs270/Programs/svn-notes.html](http://www.cs.colostate.edu/~cs270/Programs/svn-notes.html)

Go to the website above and apply the instructions towards making an SVN Repository in your group folder.

# Assignment #2

**Start Early! (i.e. NOW!)**
