

Chapter 4b

1. What is a transaction? What does being atomic mean?
2. What are integrity constraints? What are some of the possible integrity constraints on a single relation?
3. What is referential integrity? Who enforces it? How can it be insured using the DDL?
4. What is a check clause? Does MySQL support it?

5. What are some of the built-in data types in SQL?

6. What is an index? How are they used?

7. What are some of the forms of authorization on the database?

8. How is authorization specified? Removed?
