    Unsigned 16-bit integer
scsi.sbc.verify.vlen32  Verification Length
    Unsigned 32-bit integer
scsi.sbc.verify_flags  Flags
    Unsigned 8-bit integer
scsi.sbc.vrprotect  VRPROTECT
    Unsigned 8-bit integer
scsi.sbc.writesame_flags  Flags
    Unsigned 8-bit integer
scsi.sbc.wrprotect  WRPROTECT
    Unsigned 8-bit integer
scsi.sbc.wrverify.lba  LBA
    Unsigned 32-bit integer
scsi.sbc.wrverify.lba64  LBA
    Unsigned 64-bit integer
scsi.sbc.wrverify.xferlen  Transfer Length
    Unsigned 16-bit integer
scsi.sbc.wrverify.xferlen32  Transfer Length
    Unsigned 32-bit integer
scsi.sbc.wrverify_flags  Flags
    Unsigned 8-bit integer
scsi.sbc.xdread.flags  Flags
    Unsigned 8-bit integer
scsi.sbc.xdwrite.flags  Flags
    Unsigned 8-bit integer
scsi.sbc.xdwriteread.flags  Flags
    Unsigned 8-bit integer
scsi.sbc.xorpinfo  XORPINFO
    Boolean
scsi.sbc.xpwrite.flags  Flags
    Unsigned 8-bit integer
```

**SCSI\_SMC (scsi\_smc)**

```
scsi.smc.action_code  Action Code
    Unsigned 8-bit integer
scsi.smc.da  Destination Address
    Unsigned 16-bit integer
```

```
scsi.smc.ea    Element Address
               Unsigned 16-bit integer

scsi.smc.fast  FAST
               Boolean

scsi.smc.fda   First Destination Address
               Unsigned 16-bit integer

scsi.smc.invl  INV1
               Boolean

scsi.smc.inv2  INV2
               Boolean

scsi.smc.invert  INVERT
               Boolean

scsi.smc.medium_flags  Flags
               Unsigned 8-bit integer

scsi.smc.mta   Medium Transport Address
               Unsigned 16-bit integer

scsi.smc.num_elements  Number of Elements
               Unsigned 16-bit integer

scsi.smc.opcode  SMC Opcode
               Unsigned 8-bit integer

scsi.smc.range  RANGE
               Boolean

scsi.smc.range_flags  Flags
               Unsigned 8-bit integer

scsi.smc.sa     Source Address
               Unsigned 16-bit integer

scsi.smc.sda   Second Destination Address
               Unsigned 16-bit integer

scsi.smc.sea   Starting Element Address
               Unsigned 16-bit integer
```

**SCSI\_SSC (scsi\_ssc)**

```
scsi.ssc.bam   BAM
               Boolean

scsi.ssc.bam_flags  Flags
               Unsigned 8-bit integer

scsi.ssc.bt    BT
               Boolean

scsi.ssc.bytcmp  BYTCMP
               Boolean

scsi.ssc.bytorc  BYTORD
               Boolean

scsi.ssc.cp     CP
               Boolean
```

```
scsi.ssc.cpv Capacity Proportion Value
    Unsigned 16-bit integer
scsi.ssc.dest_type Dest Type
    Unsigned 8-bit integer
scsi.ssc.eot EOT
    Boolean
scsi.ssc.erase_flags Flags
    Unsigned 8-bit integer
scsi.ssc.erase_immed IMMED
    Boolean
scsi.ssc.fcs FCS
    Boolean
scsi.ssc.fixed FIXED
    Boolean
scsi.ssc.format Format
    Unsigned 8-bit integer
scsi.ssc.formatmedium_flags Flags
    Unsigned 8-bit integer
scsi.ssc.hold HOLD
    Boolean
scsi.ssc.immed IMMED
    Boolean
scsi.ssc.lbi Logical Block Identifier
    Unsigned 64-bit integer
scsi.ssc.lcs LCS
    Boolean

    Unsigned 32-bit integer
scsi.ssc.locate16.loid Logical Identifier
    Unsigned 64-bit integer
scsi.ssc.locate_flags Flags
    Unsigned 8-bit integer
scsi.ssc.long LONG
    Boolean
scsi.ssc.media Media
    Boolean
scsi.ssc.medium_type Medium Type
    Boolean
```

```
scsi.ssc.opcode  SSC Opcode
    Unsigned 8-bit integer
scsi.ssc.partition  Partition
    Unsigned 8-bit integer
scsi.ssc.rdwrl0.xferlen  Transfer Length
    Unsigned 16-bit integer
scsi.ssc.rdwrl6.xferlen  Transfer Length
    Unsigned 24-bit integer
scsi.ssc.read6_flags  Flags
    Unsigned 8-bit integer
scsi.ssc.reten  RETEN
    Boolean
scsi.ssc.sili  SILI
    Boolean
scsi.ssc.space16.count  Count
    Unsigned 64-bit integer
scsi.ssc.space6.code  Code
    Unsigned 8-bit integer
scsi.ssc.space6.count  Count
    Signed 24-bit integer
scsi.ssc.verify  VERIFY
    Boolean
scsi.ssc.verify16.verify_len  Verification Length
    Unsigned 24-bit integer
scsi.ssc.verify16.immed  IMMED
    Boolean
```

**SEBEK – Kernel Data Capture (sebek)**

```
sebek.cmd  Command Name
    String
    Command Name
sebek.counter  Counter
    Unsigned 32-bit integer
    Counter
sebek.data  Data
    String
    Data
sebek.fd  File Descriptor
    Unsigned 32-bit integer
    File Descriptor Number
sebek.inode  Inode ID
    Unsigned 32-bit integer
    Process ID
sebek.len  Data Length
    Unsigned 32-bit integer
    Data Length
```

```
sebek.magic  Magic
             Unsigned 32-bit integer
             Magic Number

sebek.pid    Process ID
             Unsigned 32-bit integer
             Process ID

sebek.ppid   Parent Process ID
             Unsigned 32-bit integer
             Process ID

sebek.socket.call  Socket.Call_id
                  Unsigned 16-bit integer
                  Socket.call

sebek.socket.dst_ip  Socket.remote_ip
                    IPv4 address
                    Socket.dst_ip

sebek.socket.dst_port  Socket.remote_port
                       Unsigned 16-bit integer
                       Socket.dst_port

sebek.socket.ip_proto  Socket.ip_proto
                       Unsigned 8-bit integer
                       Socket.ip_proto

sebek.socket.src_ip  Socket.local_ip
                    IPv4 address
                    Socket.src_ip

sebek.socket.src_port  Socket.local_port
                       Unsigned 16-bit integer
                       Socket.src_port

sebek.time.sec  Time
                Date/Time stamp
                Time

sebek.type  Type
            Unsigned 16-bit integer
            Type

sebek.uid  User ID
           Unsigned 32-bit integer
           User ID

sebek.version  Version
               Unsigned 16-bit integer
               Version Number
```

#### **SGI Mount Service (sgimount)**

#### **SMB (Server Message Block Protocol) (smb)**

```
nt.access_mask  Access required
                Unsigned 32-bit integer
                Access mask
```

```
nt.access_mask.access_sacl  Access SACL
    Boolean
    Access SACL
nt.access_mask.delete      Delete
    Boolean
    Delete
nt.access_mask.generic_all  Generic all
    Boolean
    Generic all
nt.access_mask.generic_execute  Generic execute
    Boolean
    Generic execute
nt.access_mask.generic_read  Generic read
    Boolean
    Generic read
nt.access_mask.generic_write  Generic write
    Boolean
    Generic write
nt.access_mask.maximum_allowed  Maximum allowed
    Boolean
    Maximum allowed
nt.access_mask.read_control  Read control
    Boolean
    Read control
nt.access_mask.specific_0    Specific access, bit 0
    Boolean
    Specific access, bit 0
nt.access_mask.specific_1    Specific access, bit 1
    Boolean
    Specific access, bit 1
nt.access_mask.specific_10   Specific access, bit 10
    Boolean
    Specific access, bit 10
nt.access_mask.specific_11   Specific access, bit 11
    Boolean
    Specific access, bit 11
nt.access_mask.specific_12   Specific access, bit 12
    Boolean
    Specific access, bit 12
nt.access_mask.specific_13   Specific access, bit 13
    Boolean
    Specific access, bit 13
nt.access_mask.specific_14   Specific access, bit 14
    Boolean
    Specific access, bit 14
nt.access_mask.specific_15   Specific access, bit 15
    Boolean
    Specific access, bit 15
```

```
nt.access_mask.specific_2  Specific access, bit 2
    Boolean
    Specific access, bit 2
nt.access_mask.specific_3  Specific access, bit 3
    Boolean
    Specific access, bit 3
nt.access_mask.specific_4  Specific access, bit 4
    Boolean
    Specific access, bit 4
nt.access_mask.specific_5  Specific access, bit 5
    Boolean
    Specific access, bit 5
nt.access_mask.specific_6  Specific access, bit 6
    Boolean
    Specific access, bit 6
nt.access_mask.specific_7  Specific access, bit 7
    Boolean
    Specific access, bit 7
nt.access_mask.specific_8  Specific access, bit 8
    Boolean
    Specific access, bit 8
nt.access_mask.specific_9  Specific access, bit 9
    Boolean
    Specific access, bit 9
nt.access_mask.synchronise  Synchronise
    Boolean
    Synchronise
nt.access_mask.write_dac   Write DAC
    Boolean
    Write DAC
nt.access_mask.write_owner  Write owner
    Boolean
    Write owner
nt.ace.flags.container_inherit  Container Inherit
    Boolean
    Will subordinate containers inherit this ACE?
nt.ace.flags.failed_access  Audit Failed Accesses
    Boolean
    Should failed accesses be audited?
nt.ace.flags.inherit_only  Inherit Only
    Boolean
    Does this ACE apply to the current object?
nt.ace.flags.inherited_ace  Inherited ACE
    Boolean
    Was this ACE inherited from its parent object?
nt.ace.flags.non_propagate_inherit  Non-Propagate Inherit
    Boolean
    Will subordinate object propagate this ACE further?
```

```
nt.ace.flags.object_inherit  Object Inherit
    Boolean
    Will subordinate files inherit this ACE?
nt.ace.flags.successful_access  Audit Successful Accesses
    Boolean
    Should successful accesses be audited?
nt.ace.object.flags.inherited_object_type_present  Inherited Object Type Present
    Boolean
nt.ace.object.flags.object_type_present  Object Type Present
    Boolean
nt.ace.object.guid  GUID
nt.ace.object.inherited_guid  Inherited GUID
nt.ace.size  Size
    Unsigned 16-bit integer
    Size of this ACE
nt.ace.type  Type
    Unsigned 8-bit integer
    Type of ACE
nt.acl.num_aces  Num ACEs
    Unsigned 32-bit integer
    Number of ACE structures for this ACL
nt.acl.revision  Revision
    Unsigned 16-bit integer
    Version of NT ACL structure
nt.acl.size  Size
    Unsigned 16-bit integer
    Size of NT ACL structure
nt.sec_desc.revision  Revision
    Unsigned 16-bit integer
    Version of NT Security Descriptor structure
nt.sec_desc.type.dacl_auto_inherit_req  DACL Auto Inherit Required
    Boolean
    Does this SecDesc have DACL Auto Inherit Required set?
nt.sec_desc.type.dacl_auto_inherited  DACL Auto Inherited
    Boolean
    Is this DACL auto inherited
nt.sec_desc.type.dacl_defaulted  DACL Defaulted
    Boolean
    Does this SecDesc have DACL Defaulted?
nt.sec_desc.type.dacl_present  DACL Present
    Boolean
    Does this SecDesc have DACL present?
nt.sec_desc.type.dacl_protected  DACL Protected
    Boolean
    Is the DACL structure protected?
```

```
nt.sec_desc.type.dacl_trusted  DACL Trusted
  Boolean
  Does this SecDesc have DACL TRUSTED set?
nt.sec_desc.type.group_defaulted  Group Defaulted
  Boolean
  Is Group Defaulted?
nt.sec_desc.type.owner_defaulted  Owner Defaulted
  Boolean
  Is Owner Defaulted set?
nt.sec_desc.type.rm_control_valid  RM Control Valid
  Boolean
  Is RM Control Valid set?
nt.sec_desc.type.sacl_auto_inherit_req  SACL Auto Inherit Required
  Boolean
  Does this SecDesc have SACL Auto Inherit Required set?
nt.sec_desc.type.sacl_auto_inherited  SACL Auto Inherited
  Boolean
  Is this SACL auto inherited
nt.sec_desc.type.sacl_defaulted  SACL Defaulted
  Boolean
  Does this SecDesc have SACL Defaulted?
nt.sec_desc.type.sacl_present  SACL Present
  Boolean
  Is the SACL present?
nt.sec_desc.type.sacl_protected  SACL Protected
  Boolean
  Is the SACL structure protected?
nt.sec_desc.type.self_relative  Self Relative
  Boolean
  Is this SecDesc self relative?
nt.sec_desc.type.server_security  Server Security
  Boolean
  Does this SecDesc have SERVER SECURITY set?
nt.sid  SID
  String
  SID: Security Identifier
nt.sid.num_auth  Num Auth
  Unsigned 8-bit integer
  Number of authorities for this SID
nt.sid.revision  Revision
  Unsigned 8-bit integer
  Version of SID structure
smb.access.append  Append
  Boolean
  Can object's contents be appended to
smb.access.caching  Caching
  Boolean
  Caching mode?
```

```
smb.access.delete Delete
  Boolean
  Can object be deleted

smb.access.delete_child Delete Child
  Boolean
  Can object's subdirectories be deleted

smb.access.execute Execute
  Boolean
  Can object be executed (if file) or traversed (if directory)

smb.access.generic_all Generic All
  Boolean
  Is generic all allowed for this attribute

smb.access.generic_execute Generic Execute
  Boolean
  Is generic execute allowed for this object?

smb.access.generic_read Generic Read
  Boolean
  Is generic read allowed for this object?

smb.access.generic_write Generic Write
  Boolean
  Is generic write allowed for this object?

smb.access.locality Locality
  Unsigned 16-bit integer
  Locality of reference

smb.access.maximum_allowed Maximum Allowed
  Boolean
  ?

smb.access.mode Access Mode
  Unsigned 16-bit integer
  Access Mode

smb.access.read Read
  Boolean
  Can object's contents be read

smb.access.read_attributes Read Attributes
  Boolean
  Can object's attributes be read

smb.access.read_control Read Control
  Boolean
  Are reads allowed of owner, group and ACL data of the SID?

smb.access.read_ea Read EA
  Boolean
  Can object's extended attributes be read

smb.access.sharing Sharing Mode
  Unsigned 16-bit integer
  Sharing Mode

smb.access.smb.date Last Access Date
  Unsigned 16-bit integer
  Last Access Date, SMB_DATE format
```

```
smb.access.smb.time    Last Access Time
    Unsigned 16-bit integer
    Last Access Time, SMB_TIME format

smb.access.synchronize Synchronize
    Boolean
    Windows NT: synchronize access

smb.access.system_security System Security
    Boolean
    Access to a system ACL?

smb.access.time        Last Access
    Date/Time stamp
    Last Access Time

smb.access.write       Write
    Boolean
    Can object's contents be written

smb.access.write_attributes Write Attributes
    Boolean
    Can object's attributes be written

smb.access.write_dac   Write DAC
    Boolean
    Is write allowed to the owner group or ACLs?

smb.access.write_ea    Write EA
    Boolean
    Can object's extended attributes be written

smb.access.write_owner Write Owner
    Boolean
    Can owner write to the object?

smb.access.writethrough Writethrough
    Boolean
    Writethrough mode?

smb.access_mask        Access Mask
    Unsigned 32-bit integer

smb.account            Account
    String
    Account, username

smb.actual_free_alloc_units Actual Free Units
    Unsigned 64-bit integer
    Number of actual free allocation units

smb.alignment          Alignment
    Unsigned 32-bit integer
    What alignment do we require for buffers

smb.alloc.count        Allocation Block Count
    Unsigned 32-bit integer
    Allocation Block Count

smb.alloc.size         Allocation Block Count
    Unsigned 32-bit integer
    Allocation Block Size
```

smb.alloc\_size Allocation Size  
Unsigned 32-bit integer  
Number of bytes to reserve on create or truncate

smb.andxoffset AndXOffset  
Unsigned 16-bit integer  
Offset to next command in this SMB packet

smb.ansi\_password ANSI Password  
Byte array  
ANSI Password

smb.ansi\_pwlen ANSI Password Length  
Unsigned 16-bit integer  
Length of ANSI password

smb.attribute Attribute  
Unsigned 32-bit integer

smb.avail.units Available Units  
Unsigned 32-bit integer  
Total number of available units on this filesystem

smb.backup.time Backed-up  
Date/Time stamp  
Backup time

smb.bcc Byte Count (BCC)  
Unsigned 16-bit integer  
Byte Count, count of data bytes

smb.blocksize Block Size  
Unsigned 16-bit integer  
Block size (in bytes) at server

smb.bpu Blocks Per Unit  
Unsigned 16-bit integer  
Blocks per unit at server

smb.buffer\_format Buffer Format  
Unsigned 8-bit integer  
Buffer Format, type of buffer

smb.caller\_free\_alloc\_units Caller Free Units  
Unsigned 64-bit integer  
Number of caller free allocation units

smb.cancel\_to Cancel to  
Frame number  
This packet is a cancellation of the packet in this frame

smb.change.time Change  
Date/Time stamp  
Last Change Time

smb.change\_count Change Count  
Unsigned 16-bit integer  
Number of changes to wait for

smb.cmd SMB Command  
Unsigned 8-bit integer  
SMB Command

```
smb.compressed.chunk_shift  Chunk Shift
    Unsigned 8-bit integer
    Allocated size of the stream in number of bytes

smb.compressed.cluster_shift  Cluster Shift
    Unsigned 8-bit integer
    Allocated size of the stream in number of bytes

smb.compressed.file_size  Compressed Size
    Unsigned 64-bit integer
    Size of the compressed file

smb.compressed.format  Compression Format
    Unsigned 16-bit integer
    Compression algorithm used

smb.compressed.unit_shift  Unit Shift
    Unsigned 8-bit integer
    Size of the stream in number of bytes

smb.connect.flags.dtid  Disconnect TID
    Boolean
    Disconnect TID?

smb.connect.support.dfs  In Dfs
    Boolean
    Is this in a Dfs tree?

smb.connect.support.search  Search Bits
    Boolean
    Exclusive Search Bits supported?

smb.continuation_to  Continuation to
    Frame number
    This packet is a continuation to the packet in this frame

smb.copy.flags.dest_mode  Destination mode
    Boolean
    Is destination in ASCII?

smb.copy.flags.dir  Must be directory
    Boolean
    Must target be a directory?

smb.copy.flags.ea_action  EA action if EAs not supported on dest
    Boolean
    Fail copy if source file has EAs and dest doesn't support EAs?

smb.copy.flags.file  Must be file
    Boolean
    Must target be a file?

smb.copy.flags.source_mode  Source mode
    Boolean
    Is source in ASCII?

smb.copy.flags.tree_copy  Tree copy
    Boolean
    Is copy a tree copy?

smb.copy.flags.verify  Verify writes
    Boolean
    Verify all writes?
```

smb.count Count  
Unsigned 32-bit integer  
Count number of items/bytes

smb.count\_high Count High (multiply with 64K)  
Unsigned 16-bit integer  
Count number of items/bytes, High 16 bits

smb.count\_low Count Low  
Unsigned 16-bit integer  
Count number of items/bytes, Low 16 bits

smb.create.action Create action  
Unsigned 32-bit integer  
Type of action taken

smb.create.disposition Disposition  
Unsigned 32-bit integer  
Create disposition, what to do if the file does/does not exist

smb.create.file\_id Server unique file ID  
Unsigned 32-bit integer  
Server unique file ID

smb.create.smb.date Create Date  
Unsigned 16-bit integer  
Create Date, SMB\_DATE format

smb.create.smb.time Create Time  
Unsigned 16-bit integer  
Create Time, SMB\_TIME format

smb.create.time Created  
Date/Time stamp  
Creation Time

smb.create\_flags Create Flags  
Unsigned 32-bit integer

smb.create\_options Create Options  
Unsigned 32-bit integer

smb.data\_disp Data Displacement  
Unsigned 16-bit integer  
Data Displacement

smb.data\_len Data Length  
Unsigned 16-bit integer  
Length of data

smb.data\_len\_high Data Length High (multiply with 64K)  
Unsigned 16-bit integer  
Length of data, High 16 bits

smb.data\_len\_low Data Length Low  
Unsigned 16-bit integer  
Length of data, Low 16 bits

smb.data\_offset Data Offset  
Unsigned 16-bit integer  
Data Offset

```
smb.data_size  Data Size
  Unsigned 32-bit integer
  Data Size

smb.dc  Data Count
  Unsigned 16-bit integer
  Number of data bytes in this buffer

smb.dcm  Data Compaction Mode
  Unsigned 16-bit integer
  Data Compaction Mode

smb.delete_pending  Delete Pending
  Unsigned 16-bit integer
  Is this object about to be deleted?

smb.destination_name  Destination Name
  String
  Name of recipient of message

smb.device.floppy  Floppy
  Boolean
  Is this a floppy disk

smb.device.mounted  Mounted
  Boolean
  Is this a mounted device

smb.device.read_only  Read Only
  Boolean
  Is this a read-only device

smb.device.remote  Remote
  Boolean
  Is this a remote device

smb.device.removable  Removable
  Boolean
  Is this a removable device

smb.device.type  Device Type
  Unsigned 32-bit integer
  Type of device

smb.device.virtual  Virtual
  Boolean
  Is this a virtual device

smb.device.write_once  Write Once
  Boolean
  Is this a write-once device

smb.dfs.flags.fielding  Fielding
  Boolean
  The servers in referrals are capable of fielding

smb.dfs.flags.server_hold_storage  Hold Storage
  Boolean
  The servers in referrals should hold storage for the file

smb.dfs.num_referrals  Num Referrals
  Unsigned 16-bit integer
  Number of referrals in this pdu
```

```
smb.dfs.path_consumed  Path Consumed
    Unsigned 16-bit integer
    Number of RequestFilename bytes client

smb.dfs.referral.alt_path  Alt Path
    String
    Alternative(8.3) Path that matched pathconsumed

smb.dfs.referral.alt_path_offset  Alt Path Offset
    Unsigned 16-bit integer
    Offset of alternative(8.3) Path that matched pathconsumed

smb.dfs.referral.flags.strip  Strip
    Boolean
    Should we strip off pathconsumed characters before submitting?

smb.dfs.referral.node  Node
    String
    Name of entity to visit next

smb.dfs.referral.node_offset  Node Offset
    Unsigned 16-bit integer
    Offset of name of entity to visit next

smb.dfs.referral.path  Path
    String
    Dfs Path that matched pathconsumed

smb.dfs.referral.path_offset  Path Offset
    Unsigned 16-bit integer
    Offset of Dfs Path that matched pathconsumed

smb.dfs.referral.proximity  Proximity
    Unsigned 16-bit integer
    Hint describing proximity of this server to the client

smb.dfs.referral.server.type  Server Type
    Unsigned 16-bit integer
    Type of referral server

smb.dfs.referral.size  Size
    Unsigned 16-bit integer
    Size of referral element

smb.dfs.referral.ttl  TTL
    Unsigned 16-bit integer
    Number of seconds the client can cache this referral

smb.dfs.referral.version  Version
    Unsigned 16-bit integer
    Version of referral element

smb.dialect.index  Selected Index
    Unsigned 16-bit integer
    Index of selected dialect

smb.dialect.name  Name
    String
    Name of dialect

smb.dir.accessmask.add_file  Add File
    Boolean
```

```
smb.dir.accessmask.add_subdir  Add Subdir
    Boolean

smb.dir.accessmask.delete_child  Delete Child
    Boolean

smb.dir.accessmask.list  List
    Boolean

smb.dir.accessmask.read_attribute  Read Attribute
    Boolean

smb.dir.accessmask.read_ea  Read EA
    Boolean

smb.dir.accessmask.traverse  Traverse
    Boolean

smb.dir.accessmask.write_attribute  Write Attribute
    Boolean

smb.dir.accessmask.write_ea  Write EA
    Boolean

smb.dir.count  Root Directory Count
    Unsigned 32-bit integer
    Directory Count

smb.dir_name  Directory
    String
    SMB Directory Name

smb.disposition.delete_on_close  Delete on close
    Boolean

smb.ea.data  EA Data
    Byte array
    EA Data

smb.ea.data_length  EA Data Length
    Unsigned 16-bit integer
    EA Data Length

smb.ea.error_offset  EA Error offset
    Unsigned 32-bit integer
    Offset into EA list if EA error

smb.ea.flags  EA Flags
    Unsigned 8-bit integer
    EA Flags

smb.ea.list_length  EA List Length
    Unsigned 32-bit integer
    Total length of extended attributes

smb.ea.name  EA Name
    String
    EA Name

smb.ea.name_length  EA Name Length
    Unsigned 8-bit integer
    EA Name Length
```

```
smb.echo.count  Echo Count
    Unsigned 16-bit integer
    Number of times to echo data back

smb.echo.data  Echo Data
    Byte array
    Data for SMB Echo Request/Response

smb.echo.seq_num  Echo Seq Num
    Unsigned 16-bit integer
    Sequence number for this echo response

smb.encryption_key  Encryption Key
    Byte array
    Challenge/Response Encryption Key (for LM2.1 dialect)

smb.encryption_key_length  Key Length
    Unsigned 16-bit integer
    Encryption key length (must be 0 if not LM2.1 dialect)

smb.end_of_file  End Of File
    Unsigned 64-bit integer
    Offset to the first free byte in the file

smb.end_of_search  End Of Search
    Unsigned 16-bit integer
    Was last entry returned?

smb.error_class  Error Class
    Unsigned 8-bit integer
    DOS Error Class

smb.error_code  Error Code
    Unsigned 16-bit integer
    DOS Error Code

smb.ext_attr  Extended Attributes
    Byte array
    Extended Attributes

smb.ff2_loi  Level of Interest
    Unsigned 16-bit integer
    Level of interest for FIND_FIRST2 command

smb.fid  FID
    Unsigned 16-bit integer
    FID: File ID

smb.fid.closed_in  Closed in
    Frame number
    The frame this fid was closed

smb.fid.mapped_in  Mapped in
    Frame number
    The frame this share was mapped

smb.fid.opened_in  Opened in
    Frame number
    The frame this fid was opened

smb.fid.unmapped_in  Unmapped in
    Frame number
    The frame this share was unmapped
```

```
smb.file File Name
  String
  File Name
smb.file.accessmask.append_data Append Data
  Boolean
smb.file.accessmask.execute Execute
  Boolean
smb.file.accessmask.read_attribute Read Attribute
  Boolean
smb.file.accessmask.read_data Read Data
  Boolean
smb.file.accessmask.read_ea Read EA
  Boolean
smb.file.accessmask.write_attribute Write Attribute
  Boolean
smb.file.accessmask.write_data Write Data
  Boolean
smb.file.accessmask.write_ea Write EA
  Boolean
smb.file.count Root File Count
  Unsigned 32-bit integer
  File Count
smb.file.rw.length File RW Length
  Unsigned 32-bit integer
smb.file.rw.offset File Offset
  Unsigned 32-bit integer
smb.file_attribute.archive Archive
  Boolean
  ARCHIVE file attribute
smb.file_attribute.compressed Compressed
  Boolean
  Is this file compressed?
smb.file_attribute.device Device
  Boolean
  Is this file a device?
smb.file_attribute.directory Directory
  Boolean
  DIRECTORY file attribute
smb.file_attribute.encrypted Encrypted
  Boolean
  Is this file encrypted?
smb.file_attribute.hidden Hidden
  Boolean
  HIDDEN file attribute
```

```
smb.file_attribute.normal Normal
  Boolean
  Is this a normal file?
smb.file_attribute.not_content_indexed Content Indexed
  Boolean
  May this file be indexed by the content indexing service
smb.file_attribute.offline Offline
  Boolean
  Is this file offline?
smb.file_attribute.read_only Read Only
  Boolean
  READ ONLY file attribute
smb.file_attribute.reparse Reparse Point
  Boolean
  Does this file have an associated reparse point?
smb.file_attribute.sparse Sparse
  Boolean
  Is this a sparse file?
smb.file_attribute.system System
  Boolean
  SYSTEM file attribute
smb.file_attribute.temporary Temporary
  Boolean
  Is this a temporary file?
smb.file_attribute.volume Volume ID
  Boolean
  VOLUME file attribute
smb.file_data File Data
  Byte array
  Data read/written to the file
smb.file_index File Index
  Unsigned 32-bit integer
  File index
smb.file_name_len File Name Len
  Unsigned 32-bit integer
  Length of File Name
smb.file_size File Size
  Unsigned 32-bit integer
  File Size
smb.file_type File Type
  Unsigned 16-bit integer
  Type of file
smb.files_moved Files Moved
  Unsigned 16-bit integer
  Number of files moved
smb.find_first2.flags.backup Backup Intent
  Boolean
  Find with backup intent
```

```
smb.find_first2.flags.close  Close
    Boolean
    Close search after this request

smb.find_first2.flags.continue  Continue
    Boolean
    Continue search from previous ending place

smb.find_first2.flags.eos  Close on EOS
    Boolean
    Close search if end of search reached

smb.find_first2.flags.resume  Resume
    Boolean
    Return resume keys for each entry found

smb.flags.canon  Canonicalized Pathnames
    Boolean
    Are pathnames canonicalized?

smb.flags.caseless  Case Sensitivity
    Boolean
    Are pathnames caseless or casesensitive?

smb.flags.lock  Lock and Read
    Boolean
    Are Lock&Read and Write&Unlock operations supported?

smb.flags.notify  Notify
    Boolean
    Notify on open or all?

smb.flags.oplock  Oplocks
    Boolean
    Is an oplock requested/granted?

smb.flags.receive_buffer  Receive Buffer Posted
    Boolean
    Have receive buffers been reported?

smb.flags.response  Request/Response
    Boolean
    Is this a request or a response?

smb.flags2.dfs  Dfs
    Boolean
    Can pathnames be resolved using Dfs?

smb.flags2.ea  Extended Attributes
    Boolean
    Are extended attributes supported?

smb.flags2.esn  Extended Security Negotiation
    Boolean
    Is extended security negotiation supported?

smb.flags2.long_names_allowed  Long Names Allowed
    Boolean
    Are long file names allowed in the response?

smb.flags2.long_names_used  Long Names Used
    Boolean
    Are pathnames in this request long file names?
```

smb.flags2.nt\_error Error Code Type  
Boolean  
Are error codes NT or DOS format?

smb.flags2.roe Execute-only Reads  
Boolean  
Will reads be allowed for execute-only files?

smb.flags2.sec\_sig Security Signatures  
Boolean  
Are security signatures supported?

smb.flags2.string Unicode Strings  
Boolean  
Are strings ASCII or Unicode?

smb.fn\_loi Level of Interest  
Unsigned 16-bit integer  
Level of interest for FIND\_NOTIFY command

smb.forwarded\_name Forwarded Name  
String  
Recipient name being forwarded

smb.free\_alloc\_units Free Units  
Unsigned 64-bit integer  
Number of free allocation units

smb.free\_block.count Free Block Count  
Unsigned 32-bit integer  
Free Block Count

smb.free\_units Free Units  
Unsigned 16-bit integer  
Number of free units at server

smb.fs\_attr.cpn Case Preserving  
Boolean  
Will this FS Preserve Name Case?

smb.fs\_attr.css Case Sensitive Search  
Boolean  
Does this FS support Case Sensitive Search?

smb.fs\_attr.fc Compression  
Boolean  
Does this FS support File Compression?

smb.fs\_attr.ns Named Streams  
Boolean  
Does this FS support named streams?

smb.fs\_attr.pacls Persistent ACLs  
Boolean  
Does this FS support Persistent ACLs?

smb.fs\_attr.rov Read Only Volume  
Boolean  
Is this FS on a read only volume?

smb.fs\_attr.se Supports Encryption  
Boolean  
Does this FS support encryption?

```
smb.fs_attr.sla  LFN APIs
  Boolean
  Does this FS support LFN APIs?
smb.fs_attr.soids Supports OIDs
  Boolean
  Does this FS support OIDs?
smb.fs_attr.srp  Reparse Points
  Boolean
  Does this FS support REPARSE POINTS?
smb.fs_attr.srs  Remote Storage
  Boolean
  Does this FS support REMOTE STORAGE?
smb.fs_attr.ssf  Sparse Files
  Boolean
  Does this FS support SPARSE FILES?
smb.fs_attr.uod  Unicode On Disk
  Boolean
  Does this FS support Unicode On Disk?
smb.fs_attr.vis  Volume Is Compressed
  Boolean
  Is this FS on a compressed volume?
smb.fs_attr.vq   Volume Quotas
  Boolean
  Does this FS support Volume Quotas?
smb.fs_bytes_per_sector Bytes per Sector
  Unsigned 32-bit integer
  Bytes per sector
smb.fs_id  FS Id
  Unsigned 32-bit integer
  File System ID (NT Server always returns 0)
smb.fs_max_name_len Max name length
  Unsigned 32-bit integer
  Maximum length of each file name component in number of bytes
smb.fs_name  FS Name
  String
  Name of filesystem
smb.fs_name.len Label Length
  Unsigned 32-bit integer
  Length of filesystem name in bytes
smb.fs_sector_per_unit Sectors/Unit
  Unsigned 32-bit integer
  Sectors per allocation unit
smb.fs_units  Total Units
  Unsigned 32-bit integer
  Total number of units on this filesystem
smb.group_id  Group ID
  Unsigned 16-bit integer
  SMB-over-IPX Group ID
```

```
smb.impersonation.level  Impersonation
    Unsigned 32-bit integer
    Impersonation level

smb.index_number  Index Number
    Unsigned 64-bit integer
    File system unique identifier

smb.ipc_state.endpoint  Endpoint
    Unsigned 16-bit integer
    Which end of the pipe this is

smb.ipc_state.icount  Icount
    Unsigned 16-bit integer
    Count to control pipe instancing

smb.ipc_state.nonblocking  Nonblocking
    Boolean
    Is I/O to this pipe nonblocking?

smb.ipc_state.pipe_type  Pipe Type
    Unsigned 16-bit integer
    What type of pipe this is

smb.ipc_state.read_mode  Read Mode
    Unsigned 16-bit integer
    How this pipe should be read

smb.is_directory  Is Directory
    Unsigned 8-bit integer
    Is this object a directory?

smb.key  Key
    Unsigned 32-bit integer
    SMB-over-IPX Key

smb.last_name_offset  Last Name Offset
    Unsigned 16-bit integer
    If non-0 this is the offset into the datablock for the file name of the last

smb.last_write.smb.date  Last Write Date
    Unsigned 16-bit integer
    Last Write Date, SMB_DATE format

smb.last_write.smb.time  Last Write Time
    Unsigned 16-bit integer
    Last Write Time, SMB_TIME format

smb.last_write.time  Last Write
    Date/Time stamp
    Time this file was last written to

smb.link_count  Link Count
    Unsigned 32-bit integer
    Number of hard links to the file

smb.lock.length  Length
    Unsigned 64-bit integer
    Length of lock/unlock region

smb.lock.offset  Offset
    Unsigned 64-bit integer
    Offset in the file of lock/unlock region
```

```
smb.lock.type.cancel  Cancel
  Boolean
  Cancel outstanding lock requests?

smb.lock.type.change  Change
  Boolean
  Change type of lock?

smb.lock.type.large  Large Files
  Boolean
  Large file locking requested?

smb.lock.type.oplock_release  Oplock Break
  Boolean
  Is this a notification of, or a response to, an oplock break?

smb.lock.type.shared  Shared
  Boolean
  Shared or exclusive lock requested?

smb.locking.num_locks  Number of Locks
  Unsigned 16-bit integer
  Number of lock requests in this request

smb.locking.num_unlocks  Number of Unlocks
  Unsigned 16-bit integer
  Number of unlock requests in this request

smb.locking.oplock.level  Oplock Level
  Unsigned 8-bit integer
  Level of existing oplock at client (if any)

smb.logged_in  Logged In
  Frame number

smb.logged_out  Logged Out
  Frame number

smb.mac.access_control  Mac Access Control
  Boolean
  Are Mac Access Control Supported

smb.mac.desktop_db_calls  Desktop DB Calls
  Boolean
  Are Macintosh Desktop DB Calls Supported?

smb.mac.finderinfo  Finder Info
  Byte array
  Finder Info

smb.mac.get_set_comments  Get Set Comments
  Boolean
  Are Mac Get Set Comments supported?

smb.mac.streams_support  Mac Streams
  Boolean
  Are Mac Extensions and streams supported?

smb.mac.support.flags  Mac Support Flags
  Unsigned 32-bit integer
  Mac Support Flags
```

smb.mac.uids Macintosh Unique IDs  
Boolean  
Are Unique IDs supported

smb.machine\_name Machine Name  
String  
Name of target machine

smb.marked\_for\_deletion Marked for Deletion  
Boolean  
Marked for deletion?

smb.max\_buf Max Buffer  
Unsigned 16-bit integer  
Max client buffer size

smb.max\_bufsize Max Buffer Size  
Unsigned 32-bit integer  
Maximum transmit buffer size

smb.max\_mpx\_count Max Mpx Count  
Unsigned 16-bit integer  
Maximum pending multiplexed requests

smb.max\_raw Max Raw Buffer  
Unsigned 32-bit integer  
Maximum raw buffer size

smb.max\_referral\_level Max Referral Level  
Unsigned 16-bit integer  
Latest referral version number understood

smb.max\_vcs Max VCs  
Unsigned 16-bit integer  
Maximum VCs between client and server

smb.maxcount Max Count  
Unsigned 16-bit integer  
Maximum Count

smb.maxcount\_high Max Count High (multiply with 64K)  
Unsigned 16-bit integer  
Maximum Count, High 16 bits

smb.maxcount\_low Max Count Low  
Unsigned 16-bit integer  
Maximum Count, Low 16 bits

smb.mdc Max Data Count  
Unsigned 32-bit integer  
Maximum number of data bytes to return

smb.message Message  
String  
Message text

smb.message.len Message Len  
Unsigned 16-bit integer  
Length of message

smb.mgid Message Group ID  
Unsigned 16-bit integer  
Message group ID for multi-block messages

```
smb.mid      Multiplex ID
             Unsigned 16-bit integer
             Multiplex ID

smb.mincount  Min Count
             Unsigned 16-bit integer
             Minimum Count

smb.mode     Mode
             Unsigned 32-bit integer

smb.modify.time  Modified
             Date/Time stamp
             Modification Time

smb.monitor_handle  Monitor Handle
             Unsigned 16-bit integer
             Handle for Find Notify operations

smb.move.flags.dir  Must be directory
             Boolean
             Must target be a directory?

smb.move.flags.file  Must be file
             Boolean
             Must target be a file?

smb.move.flags.verify  Verify writes
             Boolean
             Verify all writes?

smb.mpc      Max Parameter Count
             Unsigned 32-bit integer
             Maximum number of parameter bytes to return

smb.msc      Max Setup Count
             Unsigned 8-bit integer
             Maximum number of setup words to return

smb.native_fs  Native File System
             String
             Native File System

smb.native_lanman  Native LAN Manager
             String
             Which LANMAN protocol we are running

smb.native_os  Native OS
             String
             Which OS we are running

smb.next_entry_offset  Next Entry Offset
             Unsigned 32-bit integer
             Offset to next entry

smb.nt.create.batch_oplock  Batch Oplock
             Boolean
             Is a batch oplock requested?

smb.nt.create.dir  Create Directory
             Boolean
             Must target of open be a directory?
```

```
smb.nt.create.ext    Extended Response
  Boolean
  Extended response required?

smb.nt.create.oplock Exclusive Oplock
  Boolean
  Is an oplock requested

smb.nt.create_options.backup_intent  Backup Intent
  Boolean
  Is this opened by BACKUP ADMIN for backup intent?

smb.nt.create_options.complete_if_oplocked Complete If Oplocked
  Boolean
  Complete if oplocked flag

smb.nt.create_options.create_tree_connection Create Tree Connection
  Boolean
  Create Tree Connection flag

smb.nt.create_options.delete_on_close Delete On Close
  Boolean
  Should the file be deleted when closed?

smb.nt.create_options.directory Directory
  Boolean
  Should file being opened/created be a directory?

smb.nt.create_options.eight_dot_three_only 8.3 Only
  Boolean
  Does the client understand only 8.3 filenames?

smb.nt.create_options.intermediate_buffering Intermediate Buffering
  Boolean
  Is intermediate buffering allowed?

smb.nt.create_options.no_compression No Compression
  Boolean
  Is compression allowed?

smb.nt.create_options.no_ea_knowledge No EA Knowledge
  Boolean
  Does the client not understand extended attributes?

smb.nt.create_options.non_directory Non-Directory
  Boolean
  Should file being opened/created be a non-directory?

smb.nt.create_options.open_by_fileid Open By FileID
  Boolean
  Open file by inode

smb.nt.create_options.open_for_free_space_query Open For Free Space query
  Boolean
  Open For Free Space Query flag

smb.nt.create_options.open_no_recall Open No Recall
  Boolean
  Open no recall flag

smb.nt.create_options.open_reparse_point Open Reparse Point
  Boolean
  Is this an open of a reparse point or of the normal file?
```

```
smb.nt.create_options.random_access  Random Access
  Boolean
  Will the client be accessing the file randomly?
smb.nt.create_options.reserve_opfilter  Reserve Opfilter
  Boolean
  Reserve Opfilter flag
smb.nt.create_options.sequential_only  Sequential Only
  Boolean
  Will accesses to this file only be sequential?
smb.nt.create_options.sync_io_alert  Sync I/O Alert
  Boolean
  All operations are performed synchronous
smb.nt.create_options.sync_io_nonalert  Sync I/O Nonalert
  Boolean
  All operations are synchronous and may block
smb.nt.create_options.write_through  Write Through
  Boolean
  Should writes to the file write buffered data out before completing?
smb.nt.function  Function
  Unsigned 16-bit integer
  Function for NT Transaction
smb.nt.ioctl.flags.root_handle  Root Handle
  Boolean
  Apply to this share or root Dfs share
smb.nt.ioctl.isfsctl  IsFSctl
  Unsigned 8-bit integer
  Is this a device IOCTL (FALSE) or FS Control (TRUE)
smb.nt.notify.action  Action
  Unsigned 32-bit integer
  Which action caused this notify response
smb.nt.notify.attributes  Attribute Change
  Boolean
  Notify on changes to attributes
smb.nt.notify.creation  Created Change
  Boolean
  Notify on changes to creation time
smb.nt.notify.dir_name  Directory Name Change
  Boolean
  Notify on changes to directory name
smb.nt.notify.ea  EA Change
  Boolean
  Notify on changes to Extended Attributes
smb.nt.notify.file_name  File Name Change
  Boolean
  Notify on changes to file name
smb.nt.notify.last_access  Last Access Change
  Boolean
  Notify on changes to last access
```

```
smb.nt.notify.last_write  Last Write Change
    Boolean
    Notify on changes to last write
smb.nt.notify.security    Security Change
    Boolean
    Notify on changes to security settings
smb.nt.notify.size        Size Change
    Boolean
    Notify on changes to size
smb.nt.notify.stream_name Stream Name Change
    Boolean
    Notify on changes to stream name?
smb.nt.notify.stream_size Stream Size Change
    Boolean
    Notify on changes of stream size
smb.nt.notify.stream_write Stream Write
    Boolean
    Notify on stream write?
smb.nt.notify.watch_tree  Watch Tree
    Unsigned 8-bit integer
    Should Notify watch subdirectories also?
smb.nt_qsd.dacl           DACL
    Boolean
    Is DACL security informaton being queried?
smb.nt_qsd.group          Group
    Boolean
    Is group security informaton being queried?
smb.nt_qsd.owner          Owner
    Boolean
    Is owner security informaton being queried?
smb.nt_qsd.sacl           SACL
    Boolean
    Is SACL security informaton being queried?
smb.nt_status             NT Status
    Unsigned 32-bit integer
    NT Status code
smb.ntr_clu               Cluster count
    Unsigned 32-bit integer
    Number of clusters
smb.ntr_loi               Level of Interest
    Unsigned 16-bit integer
    NT Rename level
smb.offset                Offset
    Unsigned 32-bit integer
    Offset in file
smb.offset_high           High Offset
    Unsigned 32-bit integer
    High 32 Bits Of File Offset
```

smb.old\_file Old File Name  
String  
Old File Name (When renaming a file)

smb.open.action.lock Exclusive Open  
Boolean  
Is this file opened by another user?

smb.open.action.open Open Action  
Unsigned 16-bit integer  
Open Action, how the file was opened

smb.open.flags.add\_info Additional Info  
Boolean  
Additional Information Requested?

smb.open.flags.batch\_oplock Batch Oplock  
Boolean  
Batch Oplock Requested?

smb.open.flags.ealen Total EA Len  
Boolean  
Total EA Len Requested?

smb.open.flags.ex\_oplock Exclusive Oplock  
Boolean  
Exclusive Oplock Requested?

smb.open.function.create Create  
Boolean  
Create file if it doesn't exist?

smb.open.function.open Open  
Unsigned 16-bit integer  
Action to be taken on open if file exists

smb.oplock.level Oplock level  
Unsigned 8-bit integer  
Level of oplock granted

smb.originator\_name Originator Name  
String  
Name of sender of message

smb.padding Padding  
Byte array  
Padding or unknown data

smb.password Password  
Byte array  
Password

smb.path Path  
String  
Path. Server name and share name

smb.pc Parameter Count  
Unsigned 16-bit integer  
Number of parameter bytes in this buffer

smb.pd Parameter Displacement  
Unsigned 16-bit integer  
Displacement of these parameter bytes

```
smb.pid      Process ID
             Unsigned 16-bit integer
             Process ID

smb.pid.high Process ID High
             Unsigned 16-bit integer
             Process ID High Bytes

smb.pipe.write_len Pipe Write Len
             Unsigned 16-bit integer
             Number of bytes written to pipe

smb.pipe_info_flag Pipe Info
             Boolean

smb.po       Parameter Offset
             Unsigned 16-bit integer
             Offset (from header start) to parameters

smb.position Position
             Unsigned 64-bit integer
             File position

smb.posix_acl.ace_perms Permissions
             Unsigned 8-bit integer

smb.posix_acl.ace_perms.execute EXECUTE
             Boolean

smb.posix_acl.ace_perms.gid  GID
             Unsigned 32-bit integer

smb.posix_acl.ace_perms.owner_gid  Owner GID
             Unsigned 32-bit integer

smb.posix_acl.ace_perms.owner_uid  Owner UID
             Unsigned 32-bit integer

smb.posix_acl.ace_perms.read  READ
             Boolean

smb.posix_acl.ace_perms.uid  UID
             Unsigned 32-bit integer

smb.posix_acl.ace_perms.write  WRITE
             Boolean

smb.posix_acl.ace_type  ACE Type
             Unsigned 8-bit integer

smb.posix_acl.num_def_aces  Number of default ACEs
             Unsigned 16-bit integer

smb.posix_acl.num_file_aces  Number of file ACEs
             Unsigned 16-bit integer

smb.posix_acl.version  Posix ACL version
             Unsigned 16-bit integer

smb.primary_domain  Primary Domain
             String
             The server's primary domain
```

```
smb.print.identifier  Identifier
    String
    Identifier string for this print job

smb.print.mode  Mode
    Unsigned 16-bit integer
    Text or Graphics mode

smb.print.queued.date  Queued
    Date/Time stamp
    Date when this entry was queued

smb.print.queued.smb.date  Queued Date
    Unsigned 16-bit integer
    Date when this print job was queued, SMB_DATE format

smb.print.queued.smb.time  Queued Time
    Unsigned 16-bit integer
    Time when this print job was queued, SMB_TIME format

smb.print.restart_index  Restart Index
    Unsigned 16-bit integer
    Index of entry after last returned

smb.print.setup.len  Setup Len
    Unsigned 16-bit integer
    Length of printer setup data

smb.print.spool.file_number  Spool File Number
    Unsigned 16-bit integer
    Spool File Number, assigned by the spooler

smb.print.spool.file_size  Spool File Size
    Unsigned 32-bit integer
    Number of bytes in spool file

smb.print.spool.name  Name
    String
    Name of client that submitted this job

smb.print.start_index  Start Index
    Unsigned 16-bit integer
    First queue entry to return

smb.print.status  Status
    Unsigned 8-bit integer
    Status of this entry

smb.pwlen  Password Length
    Unsigned 16-bit integer
    Length of password

smb.qfsi_loi  Level of Interest
    Unsigned 16-bit integer
    Level of interest for QUERY_FS_INFORMATION2 command

smb.qpi_loi  Level of Interest
    Unsigned 16-bit integer
    Level of interest for TRANSACTION[2] QUERY_{FILE,PATH}_INFO commands

smb.quota.flags.deny_disk  Deny Disk
    Boolean
    Is the default quota limit enforced?
```

```
smb.quota.flags.enabled  Enabled
  Boolean
  Is quotas enabled of this FS?

smb.quota.flags.log_limit  Log Limit
  Boolean
  Should the server log an event when the limit is exceeded?

smb.quota.flags.log_warning  Log Warning
  Boolean
  Should the server log an event when the warning level is exceeded?

smb.quota.hard.default  (Hard) Quota Limit
  Unsigned 64-bit integer
  Hard Quota limit

smb.quota.soft.default  (Soft) Quota Treshold
  Unsigned 64-bit integer
  Soft Quota treshold

smb.quota.used  Quota Used
  Unsigned 64-bit integer
  How much Quota is used by this user

smb.quota.user.offset  Next Offset
  Unsigned 32-bit integer
  Relative offset to next user quota structure

smb.remaining  Remaining
  Unsigned 32-bit integer
  Remaining number of bytes

smb.reparse_tag  Reparse Tag
  Unsigned 32-bit integer

smb.replace  Replace
  Boolean
  Remove target if it exists?

smb.request.mask  Request Mask
  Unsigned 32-bit integer
  Connectionless mode mask

smb.reserved  Reserved
  Byte array
  Reserved bytes, must be zero

smb.response.mask  Response Mask
  Unsigned 32-bit integer
  Connectionless mode mask

smb.response_in  Response in
  Frame number
  The response to this packet is in this packet

smb.response_to  Response to
  Frame number
  This packet is a response to the packet in this frame

smb.resume  Resume Key
  Unsigned 32-bit integer
  Resume Key
```

```
smb.resume.client.cookie  Client Cookie
    Byte array
    Cookie, must not be modified by the server

smb.resume.find_id  Find ID
    Unsigned 8-bit integer
    Handle for Find operation

smb.resume.key_len  Resume Key Length
    Unsigned 16-bit integer
    Resume Key length

smb.resume.server.cookie  Server Cookie
    Byte array
    Cookie, must not be modified by the client

smb.rfid  Root FID
    Unsigned 32-bit integer
    Open is relative to this FID (if nonzero)

smb.rm.read  Read Raw
    Boolean
    Is Read Raw supported?

smb.rm.write  Write Raw
    Boolean
    Is Write Raw supported?

smb.root.dir.count  Root Directory Count
    Unsigned 32-bit integer
    Root Directory Count

smb.root.file.count  Root File Count
    Unsigned 32-bit integer
    Root File Count

smb.root_dir_handle  Root Directory Handle
    Unsigned 32-bit integer
    Root directory handle

smb.sc  Setup Count
    Unsigned 8-bit integer
    Number of setup words in this buffer

smb.sd.length  SD Length
    Unsigned 32-bit integer
    Total length of security descriptor

smb.search.attribute.archive  Archive
    Boolean
    ARCHIVE search attribute

smb.search.attribute.directory  Directory
    Boolean
    DIRECTORY search attribute

smb.search.attribute.hidden  Hidden
    Boolean
    HIDDEN search attribute

smb.search.attribute.read_only  Read Only
    Boolean
    READ ONLY search attribute
```

```
smb.search.attribute.system  System
    Boolean
    SYSTEM search attribute

smb.search.attribute.volume  Volume ID
    Boolean
    VOLUME ID search attribute

smb.search_count  Search Count
    Unsigned 16-bit integer
    Maximum number of search entries to return

smb.search_id  Search ID
    Unsigned 16-bit integer
    Search ID, handle for find operations

smb.search_pattern  Search Pattern
    String
    Search Pattern

smb.sec_desc_len  NT Security Descriptor Length
    Unsigned 32-bit integer
    Security Descriptor Length

smb.security.flags.context_tracking  Context Tracking
    Boolean
    Is security tracking static or dynamic?

smb.security.flags.effective_only  Effective Only
    Boolean
    Are only enabled or all aspects of the users SID available?

smb.security_blob  Security Blob
    Byte array
    Security blob

smb.security_blob_len  Security Blob Length
    Unsigned 16-bit integer
    Security blob length

smb.seek_mode  Seek Mode
    Unsigned 16-bit integer
    Seek Mode, what type of seek

smb.segment  SMB Segment
    Frame number
    SMB Segment

smb.segment.error  Defragmentation error
    Frame number
    Defragmentation error due to illegal fragments

smb.segment.multipletails  Multiple tail fragments found
    Boolean
    Several tails were found when defragmenting the packet

smb.segment.overlap  Fragment overlap
    Boolean
    Fragment overlaps with other fragments

smb.segment.overlap.conflict  Conflicting data in fragment overlap
    Boolean
    Overlapping fragments contained conflicting data
```

smb.segment.segments SMB Segments  
No value  
SMB Segments

smb.segment.toolongfragment Fragment too long  
Boolean  
Fragment contained data past end of packet

smb.sequence\_num Sequence Number  
Unsigned 16-bit integer  
SMB-over-IPX Sequence Number

smb.server Server  
String  
The name of the DC/server

smb.server\_cap.bulk\_transfer Bulk Transfer  
Boolean  
Are Bulk Read and Bulk Write supported?

smb.server\_cap.compressed\_data Compressed Data  
Boolean  
Is compressed data transfer supported?

smb.server\_cap.dfs Dfs  
Boolean  
Is Dfs supported?

smb.server\_cap.extended\_security Extended Security  
Boolean  
Are Extended security exchanges supported?

smb.server\_cap.infolevel\_passthru Infolevel Passthru  
Boolean  
Is NT information level request passthrough supported?

smb.server\_cap.large\_files Large Files  
Boolean  
Are large files (>4GB) supported?

smb.server\_cap.large\_readx Large ReadX  
Boolean  
Is Large Read andX supported?

smb.server\_cap.large\_writex Large WriteX  
Boolean  
Is Large Write andX supported?

smb.server\_cap.level\_2\_oplocks Level 2 Oplocks  
Boolean  
Are Level 2 oplocks supported?

smb.server\_cap.lock\_and\_read Lock and Read  
Boolean  
Is Lock and Read supported?

smb.server\_cap.mpx\_mode MPX Mode  
Boolean  
Are Read Mpx and Write Mpx supported?

smb.server\_cap.nt\_find NT Find  
Boolean  
Is NT Find supported?

```
smb.server_cap.nt_smbfs  NT SMBs
  Boolean
  Are NT SMBs supported?

smb.server_cap.nt_status  NT Status Codes
  Boolean
  Are NT Status Codes supported?

smb.server_cap.raw_mode  Raw Mode
  Boolean
  Are Raw Read and Raw Write supported?

smb.server_cap.reserved  Reserved
  Boolean
  RESERVED

smb.server_cap.rpc_remote_apis  RPC Remote APIs
  Boolean
  Are RPC Remote APIs supported?

smb.server_cap.unicode  Unicode
  Boolean
  Are Unicode strings supported?

smb.server_cap.unix  UNIX
  Boolean
  Are UNIX extensions supported?

smb.server_date_time  Server Date and Time
  Date/Time stamp
  Current date and time at server

smb.server_date_time.smb_date  Server Date
  Unsigned 16-bit integer
  Current date at server, SMB_DATE format

smb.server_date_time.smb_time  Server Time
  Unsigned 16-bit integer
  Current time at server, SMB_TIME format

smb.server_fid  Server FID
  Unsigned 32-bit integer
  Server unique File ID

smb.server_guid  Server GUID
  Byte array
  Globally unique identifier for this server

smb.server_timezone  Time Zone
  Signed 16-bit integer
  Current timezone at server.

smb.service  Service
  String
  Service name

smb.sessid  Session ID
  Unsigned 16-bit integer
  SMB-over-IPX Session ID

smb.session_key  Session Key
  Unsigned 32-bit integer
  Unique token identifying this session
```

```
smb.setup.action.guest  Guest
    Boolean
    Client logged in as GUEST?

smb.share.access.delete  Delete
    Boolean

smb.share.access.read  Read
    Boolean
    Can the object be shared for reading?

smb.share.access.write  Write
    Boolean
    Can the object be shared for write?

smb.share_access  Share Access
    Unsigned 32-bit integer

smb.short_file  Short File Name
    String
    Short (8.3) File Name

smb.short_file_name_len  Short File Name Len
    Unsigned 32-bit integer
    Length of Short (8.3) File Name

smb.signature  Signature
    Byte array
    Signature bytes

smb.sm.mode  Mode
    Boolean
    User or Share security mode?

smb.sm.password  Password
    Boolean
    Encrypted or plaintext passwords?

smb.sm.sig_required  Sig Req
    Boolean
    Are security signatures required?

smb.sm.signatures  Signatures
    Boolean
    Are security signatures enabled?

smb.spi_loi  Level of Interest
    Unsigned 16-bit integer
    Level of interest for TRANSACTION[2] SET_{FILE,PATH}_INFO commands

smb.storage_type  Storage Type
    Unsigned 32-bit integer
    Type of storage

smb.stream_name  Stream Name
    String
    Name of the stream

smb.stream_name_len  Stream Name Length
    Unsigned 32-bit integer
    Length of stream name
```

```
smb.stream_size  Stream Size
    Unsigned 64-bit integer
    Size of the stream in number of bytes

smb.system.time  System Time
    Date/Time stamp
    System Time

smb.target_name  Target name
    String
    Target file name

smb.target_name_len  Target name length
    Unsigned 32-bit integer
    Length of target file name

smb.tdc  Total Data Count
    Unsigned 32-bit integer
    Total number of data bytes

smb.tid  Tree ID
    Unsigned 16-bit integer
    Tree ID

smb.time  Time from request
    Time duration
    Time between Request and Response for SMB cmds

smb.timeout  Timeout
    Unsigned 32-bit integer
    Timeout in milliseconds

smb.total_data_len  Total Data Length
    Unsigned 16-bit integer
    Total length of data

smb.tpc  Total Parameter Count
    Unsigned 32-bit integer
    Total number of parameter bytes

smb.trans2.cmd  Subcommand
    Unsigned 16-bit integer
    Subcommand for TRANSACTION2

smb.trans_name  Transaction Name
    String
    Name of transaction

smb.transaction.flags.dtid  Disconnect TID
    Boolean
    Disconnect TID?

smb.transaction.flags.owt  One Way Transaction
    Boolean
    One Way Transaction (no response)?

smb.uid  User ID
    Unsigned 16-bit integer
    User ID

smb.unicode_password  Unicode Password
    Byte array
    Unicode Password
```

```
smb.unicode_pwlen  Unicode Password Length
    Unsigned 16-bit integer
    Length of Unicode password

smb.units  Total Units
    Unsigned 16-bit integer
    Total number of units at server

smb.unix.capability.fcntl  FCNTL Capability
    Boolean

smb.unix.capability.posix_acl  POSIX ACL Capability
    Boolean

smb.unix.file.atime  Last access
    Date/Time stamp

smb.unix.file.dev_major  Major device
    Unsigned 64-bit integer

smb.unix.file.dev_minor  Minor device
    Unsigned 64-bit integer

smb.unix.file.file_type  File type
    Unsigned 32-bit integer

smb.unix.file.gid  GID
    Unsigned 64-bit integer

smb.unix.file.link_dest  Link destination
    String

smb.unix.file.mtime  Last modification
    Date/Time stamp

smb.unix.file.num_bytes  Number of bytes
    Unsigned 64-bit integer
    Number of bytes used to store the file

smb.unix.file.num_links  Num links
    Unsigned 64-bit integer

smb.unix.file.perms  File permissions
    Unsigned 64-bit integer

smb.unix.file.size  File size
    Unsigned 64-bit integer

smb.unix.file.stime  Last status change
    Date/Time stamp

smb.unix.file.uid  UID
    Unsigned 64-bit integer

smb.unix.file.unique_id  Unique ID
    Unsigned 64-bit integer

smb.unix.find_file.next_offset  Next entry offset
    Unsigned 32-bit integer

smb.unix.find_file.resume_key  Resume key
    Unsigned 32-bit integer

smb.unix.major_version  Major Version
    Unsigned 16-bit integer
    UNIX Major Version
```

```
smb.unix.minor_version  Minor Version
    Unsigned 16-bit integer
    UNIX Minor Version

smb.unknown  Unknown Data
    Byte array
    Unknown Data. Should be implemented by someone

smb.vc  VC Number
    Unsigned 16-bit integer
    VC Number

smb.volume.label  Label
    String
    Volume label

smb.volume.label.len  Label Length
    Unsigned 32-bit integer
    Length of volume label

smb.volume.serial  Volume Serial Number
    Unsigned 32-bit integer
    Volume serial number

smb.wct  Word Count (WCT)
    Unsigned 8-bit integer
    Word Count, count of parameter words

smb.write.mode.connectionless  Connectionless
    Boolean
    Connectionless mode requested?

smb.write.mode.message_start  Message Start
    Boolean
    Is this the start of a message?

smb.write.mode.raw  Write Raw
    Boolean
    Use WriteRawNamedPipe?

smb.write.mode.return_remaining  Return Remaining
    Boolean
    Return remaining data responses?

smb.write.mode.write_through  Write Through
    Boolean
    Write through mode requested?
```

#### **SMB MailSlot Protocol (mailslot)**

```
mailslot.class  Class
    Unsigned 16-bit integer
    MAILSLLOT Class of transaction

mailslot.name  Mailslot Name
    String
    MAILSLLOT Name of mailslot

mailslot.opcode  Opcode
    Unsigned 16-bit integer
    MAILSLLOT OpCode
```

mailslot.priority Priority  
Unsigned 16-bit integer  
MAILSLOT Priority of transaction

mailslot.size Size  
Unsigned 16-bit integer  
MAILSLOT Total size of mail data

**SMB Pipe Protocol (pipe)**

pipe.fragment Fragment  
Frame number  
Pipe Fragment

pipe.fragment.error Defragmentation error  
Frame number  
Defragmentation error due to illegal fragments

pipe.fragment.multipletails Multiple tail fragments found  
Boolean  
Several tails were found when defragmenting the packet

pipe.fragment.overlap Fragment overlap  
Boolean  
Fragment overlaps with other fragments

pipe.fragment.overlap.conflict Conflicting data in fragment overlap  
Boolean  
Overlapping fragments contained conflicting data

pipe.fragment.toolongfragment Fragment too long  
Boolean  
Fragment contained data past end of packet

pipe.fragments Fragments  
No value  
Pipe Fragments

pipe.function Function  
Unsigned 16-bit integer  
SMB Pipe Function Code

pipe.getinfo.current\_instances Current Instances  
Unsigned 8-bit integer  
Current number of instances

pipe.getinfo.info\_level Information Level  
Unsigned 16-bit integer  
Information level of information to return

pipe.getinfo.input\_buffer\_size Input Buffer Size  
Unsigned 16-bit integer  
Actual size of buffer for incoming (client) I/O

pipe.getinfo.maximum\_instances Maximum Instances  
Unsigned 8-bit integer  
Maximum allowed number of instances

pipe.getinfo.output\_buffer\_size Output Buffer Size  
Unsigned 16-bit integer  
Actual size of buffer for outgoing (server) I/O

pipe.getinfo.pipe\_name Pipe Name  
String  
Name of pipe

pipe.getinfo.pipe\_name\_length Pipe Name Length  
Unsigned 8-bit integer  
Length of pipe name

pipe.peek.available\_bytes Available Bytes  
Unsigned 16-bit integer  
Total number of bytes available to be read from the pipe

pipe.peek.remaining\_bytes Bytes Remaining  
Unsigned 16-bit integer  
Total number of bytes remaining in the message at the head of the pipe

pipe.peek.status Pipe Status  
Unsigned 16-bit integer  
Pipe status

pipe.priority Priority  
Unsigned 16-bit integer  
SMB Pipe Priority

pipe.reassembled\_in This PDU is reassembled in  
Frame number  
The DCE/RPC PDU is completely reassembled in this frame

pipe.write\_raw.bytes\_written Bytes Written  
Unsigned 16-bit integer  
Number of bytes written to the pipe

**SMB2 (Server Message Block Protocol version 2) (smb2)**

smb2.FILE\_OBJECTID\_BUFFER FILE\_OBJECTID\_BUFFER  
No value  
A FILE\_OBJECTID\_BUFFER structure

smb2.acct Account  
String  
Account Name

smb2.aid Async Id  
Unsigned 64-bit integer  
SMB2 Async Id

smb2.allocation\_size Allocation Size  
Unsigned 64-bit integer  
SMB2 Allocation Size for this object

smb2.auth\_frame Authenticated in Frame  
Unsigned 32-bit integer  
Which frame this user was authenticated in

smb2.birth\_object\_id BirthObjectId  
ObjectID for this FID when it was originally created

smb2.birth\_volume\_id BirthVolumeId  
ObjectID for the volume where this FID was originally created

```
smb2.boot_time  Boot Time
    Date/Time stamp
    Boot Time at server

smb2.buffer_code.dynamic  Dynamic Part
    Boolean
    Whether a dynamic length blob follows

smb2.buffer_code.length  Length
    Unsigned 16-bit integer
    Length of fixed portion of PDU

smb2.capabilities  Capabilities
    Unsigned 32-bit integer

smb2.capabilities.dfs  DFS
    Boolean
    If the host supports dfs

smb2.chain_offset  Chain Offset
    Unsigned 32-bit integer
    SMB2 Chain Offset

smb2.channel  Channel
    Unsigned 32-bit integer
    Channel

smb2.class  Class
    Unsigned 8-bit integer
    Info class

smb2.client_guid  Client Guid
    Client GUID

smb2.close.flags  Close Flags
    Unsigned 16-bit integer
    close flags

smb2.cmd  Command
    Unsigned 16-bit integer
    SMB2 Command Opcode

smb2.compression_format  Compression Format
    Unsigned 16-bit integer
    Compression to use

smb2.create.action  Create Action
    Unsigned 32-bit integer
    Create Action

smb2.create.chain_data  Data
    No value
    Chain Data

smb2.create.chain_offset  Chain Offset
    Unsigned 32-bit integer
    Offset to next entry in chain or 0

smb2.create.data_length  Data Length
    Unsigned 32-bit integer
    Length Data or 0
```

```
smb2.create.disposition  Disposition
    Unsigned 32-bit integer
    Create disposition, what to do if the file does/does not exist
smb2.create.extrainfo  ExtraInfo
    No value
    Create ExtraInfo
smb2.create.oplock  Oplock
    Unsigned 8-bit integer
    Oplock type
smb2.create.time  Create
    Date/Time stamp
    Time when this object was created
smb2.create_flags  Create Flags
    Unsigned 64-bit integer
smb2.credits.granted  Credits granted
    Unsigned 16-bit integer
smb2.credits.requested  Credits requested
    Unsigned 16-bit integer
smb2.current_time  Current Time
    Date/Time stamp
    Current Time at server
smb2.data_offset  Data Offset
    Unsigned 16-bit integer
    Offset to data
smb2.delete_pending  Delete Pending
    Unsigned 8-bit integer
    Delete Pending
smb2.dialect  Dialect
    Unsigned 16-bit integer
smb2.dialect_count  Dialect count
    Unsigned 16-bit integer
smb2.disposition.delete_on_close  Delete on close
    Boolean
smb2.domain  Domain
    String
    Domain Name
smb2.domain_id  DomainId
smb2.ea.data  EA Data
    String
    EA Data
smb2.ea.data_len  EA Data Length
    Unsigned 8-bit integer
    EA Data Length
smb2.ea.flags  EA Flags
    Unsigned 8-bit integer
    EA Flags
```

```
smb2.ea.name  EA Name
  String
  EA Name

smb2.ea.name_len  EA Name Length
  Unsigned 8-bit integer
  EA Name Length

smb2.ea_size  EA Size
  Unsigned 32-bit integer
  Size of EA data

smb2.eof  End Of File
  Unsigned 64-bit integer
  SMB2 End Of File/File size

smb2.epoch  Epoch
  Unsigned 16-bit integer

smb2.fid  File Id
  SMB2 File Id

smb2.file_id  File Id
  Unsigned 64-bit integer
  SMB2 File Id

smb2.file_info.infolevel  InfoLevel
  Unsigned 8-bit integer
  File_Info Infolevel

smb2.filename  Filename
  String
  Name of the file

smb2.filename.len  Filename Length
  Unsigned 16-bit integer
  Length of the file name

smb2.find.continue_flags  Continue Flags
  Unsigned 32-bit integer
  Find Continue Flags

smb2.find.infolevel  Info Level
  Unsigned 32-bit integer
  Find_Info Infolevel

smb2.find.pattern  Search Pattern
  String
  Find pattern

smb2.flags.async  Async command
  Boolean

smb2.flags.chained  Chained
  Boolean
  Whether the pdu continues a chain or not

smb2.flags.dfs  DFS operation
  Boolean

smb2.flags.response  Response
  Boolean
  Whether this is an SMB2 Request or Response
```

```
smb2.flags.signature  Signing
  Boolean
  Whether the pdu is signed or not

smb2.fs_info.infolevel  InfoLevel
  Unsigned 8-bit integer
  Fs_Info Infolevel

smb2.header_len  Header Length
  Unsigned 16-bit integer
  SMB2 Size of Header

smb2.host  Host
  String
  Host Name

smb2.impersonation.level  Impersonation
  Unsigned 32-bit integer
  Impersonation level

smb2.infolevel  InfoLevel
  Unsigned 8-bit integer
  Infolevel

smb2.ioctl.function  Function
  Unsigned 32-bit integer
  Ioctl function

smb2.ioctl.function.access  Access
  Unsigned 32-bit integer
  Access for Ioctl

smb2.ioctl.function.device  Device
  Unsigned 32-bit integer
  Device for Ioctl

smb2.ioctl.function.function  Function
  Unsigned 32-bit integer
  Function for Ioctl

smb2.ioctl.function.method  Method
  Unsigned 32-bit integer
  Method for Ioctl

smb2.ioctl.in  In Data
  No value
  Ioctl In

smb2.ioctl.out  Out Data
  No value
  Ioctl Out

smb2.ioctl.shadow_copy.count  Count
  Unsigned 32-bit integer
  Number of bytes for shadow copy label strings

smb2.ioctl.shadow_copy.label  Label
  String
  Shadow copy label

smb2.ioctl.shadow_copy.num_labels  Num Labels
  Unsigned 32-bit integer
  Number of shadow copy labels
```

```
smb2.ioctl.shadow_copy.num_volumes  Num Volumes
    Unsigned 32-bit integer
    Number of shadow copy volumes

smb2.is_directory  Is Directory
    Unsigned 8-bit integer
    Is this a directory?

smb2.last_access.time  Last Access
    Date/Time stamp
    Time when this object was last accessed

smb2.last_change.time  Last Change
    Date/Time stamp
    Time when this object was last changed

smb2.last_write.time  Last Write
    Date/Time stamp
    Time when this object was last written to

smb2.max_ioctl_out_size  Max Ioctl Out Size
    Unsigned 32-bit integer
    SMB2 Maximum ioctl out size

smb2.max_read_size  Max Read Size
    Unsigned 32-bit integer
    Maximum size of a read

smb2.max_response_size  Max Response Size
    Unsigned 32-bit integer
    SMB2 Maximum response size

smb2.max_trans_size  Max Transaction Size
    Unsigned 32-bit integer
    Maximum size of a transaction

smb2.max_write_size  Max Write Size
    Unsigned 32-bit integer
    Maximum size of a write

smb2.next_offset  Next Offset
    Unsigned 32-bit integer
    Offset to next buffer or 0

smb2.nlinks  Number of Links
    Unsigned 32-bit integer
    Number of links to this object

smb2.nt_status  NT Status
    Unsigned 32-bit integer
    NT Status code

smb2.num_vc  VC Num
    Unsigned 8-bit integer
    Number of VCs

smb2.object_id  ObjectID
    ObjectID for this FID

smb2.olb.length  Length
    Unsigned 32-bit integer
    Length of the buffer
```

```
smb2.olb.offset  Offset
  Unsigned 32-bit integer
  Offset to the buffer

smb2.pid  Process Id
  Unsigned 32-bit integer
  SMB2 Process Id

smb2.previous_sesid  Previous Session Id
  Unsigned 64-bit integer
  SMB2 Previous Session Id

smb2.read_data  Read Data
  Byte array
  SMB2 Data that is read

smb2.read_length  Read Length
  Unsigned 32-bit integer
  Amount of data to read

smb2.read_offset  Read Offset
  Unsigned 64-bit integer
  At which offset to read the data

smb2.required_size  Required Buffer Size
  Unsigned 32-bit integer
  SMB2 required buffer size

smb2.response_buffer_offset  Response Buffer Offset
  Unsigned 16-bit integer
  Offset of the response buffer

smb2.response_in  Response in
  Frame number
  The response to this packet is in this packet

smb2.response_size  Response Size
  Unsigned 32-bit integer
  SMB2 response size

smb2.response_to  Response to
  Frame number
  This packet is a response to the packet in this frame

smb2.sec_info.infolevel  InfoLevel
  Unsigned 8-bit integer
  Sec_Info Infolevel

smb2.sec_mode  Security mode
  Unsigned 8-bit integer

smb2.sec_mode.sign_enabled  Signing enabled
  Boolean
  Is signing enabled

smb2.sec_mode.sign_required  Signing required
  Boolean
  Is signing required

smb2.security_blob  Info
  Byte array
  Find Info
```

```
smb2.security_blob_len  Security Blob Length
    Unsigned 16-bit integer
    Security blob length

smb2.security_blob_offset  Security Blob Offset
    Unsigned 16-bit integer
    Offset into the SMB2 PDU of the blob

smb2.seq_num  Command Sequence Number
    Signed 64-bit integer
    SMB2 Command Sequence Number

smb2.server_guid  Server Guid
    Server GUID

smb2.ses_flags.guest  Guest
    Boolean

smb2.ses_flags.null  Null
    Boolean

smb2.sesid  Session Id
    Unsigned 64-bit integer
    SMB2 Session Id

smb2.session_flags  Session Flags
    Unsigned 16-bit integer

smb2.setinfo_offset  Setinfo Offset
    Unsigned 16-bit integer
    SMB2 setinfo offset

smb2.setinfo_size  Setinfo Size
    Unsigned 32-bit integer
    SMB2 setinfo size

smb2.share.caching  Caching policy
    Unsigned 32-bit integer

smb2.share_caps  Share Capabilities
    Unsigned 32-bit integer

smb2.share_caps.dfs  dfs
    Boolean

smb2.share_flags  Share flags
    Unsigned 32-bit integer
    share flags

smb2.share_flags.access_based_dir_enum  access_based_dir_enum
    Boolean

smb2.share_flags.allow_namespace_caching  allow_namespace_caching
    Boolean

smb2.share_flags.dfs  dfs
    Boolean

smb2.share_flags.dfs_root  dfs_root
    Boolean

smb2.share_flags.force_shared_delete  force_shared_delete
    Boolean
```

```
smb2.share_flags.restrict_exclusive_opens  restrict_exclusive_opens
Boolean

smb2.share_type  Share Type
Unsigned 16-bit integer
Type of share

smb2.signature  Signature
Byte array
Signature

smb2.smb2_file_access_info  SMB2_FILE_ACCESS_INFO
No value
SMB2_FILE_ACCESS_INFO structure

smb2.smb2_file_alignment_info  SMB2_FILE_ALIGNMENT_INFO
No value
SMB2_FILE_ALIGNMENT_INFO structure

smb2.smb2_file_all_info  SMB2_FILE_ALL_INFO
No value
SMB2_FILE_ALL_INFO structure

smb2.smb2_file_allocation_info  SMB2_FILE_ALLOCATION_INFO
No value
SMB2_FILE_ALLOCATION_INFO structure

smb2.smb2_file_alternate_name_info  SMB2_FILE_ALTERNATE_NAME_INFO
No value
SMB2_FILE_ALTERNATE_NAME_INFO structure

smb2.smb2_file_attribute_tag_info  SMB2_FILE_ATTRIBUTE_TAG_INFO
No value
SMB2_FILE_ATTRIBUTE_TAG_INFO structure

smb2.smb2_file_basic_info  SMB2_FILE_BASIC_INFO
No value
SMB2_FILE_BASIC_INFO structure

smb2.smb2_file_compression_info  SMB2_FILE_COMPRESSION_INFO
No value
SMB2_FILE_COMPRESSION_INFO structure

smb2.smb2_file_disposition_info  SMB2_FILE_DISPOSITION_INFO
No value
SMB2_FILE_DISPOSITION_INFO structure

smb2.smb2_file_ea_info  SMB2_FILE_EA_INFO
No value
SMB2_FILE_EA_INFO structure

smb2.smb2_file_endoffile_info  SMB2_FILE_ENDOFFILE_INFO
No value
SMB2_FILE_ENDOFFILE_INFO structure

smb2.smb2_file_info_of  SMB2_FILE_INFO_of
No value
SMB2_FILE_INFO_of structure

smb2.smb2_file_internal_info  SMB2_FILE_INTERNAL_INFO
No value
SMB2_FILE_INTERNAL_INFO structure
```

```
smb2.smb2_file_mode_info  SMB2_FILE_MODE_INFO
    No value
    SMB2_FILE_MODE_INFO structure

smb2.smb2_file_network_open_info  SMB2_FILE_NETWORK_OPEN_INFO
    No value
    SMB2_FILE_NETWORK_OPEN_INFO structure

smb2.smb2_file_pipe_info  SMB2_FILE_PIPE_INFO
    No value
    SMB2_FILE_PIPE_INFO structure

smb2.smb2_file_position_info  SMB2_FILE_POSITION_INFO
    No value
    SMB2_FILE_POSITION_INFO structure

smb2.smb2_file_rename_info  SMB2_FILE_RENAME_INFO
    No value
    SMB2_FILE_RENAME_INFO structure

smb2.smb2_file_standard_info  SMB2_FILE_STANDARD_INFO
    No value
    SMB2_FILE_STANDARD_INFO structure

smb2.smb2_file_stream_info  SMB2_FILE_STREAM_INFO
    No value
    SMB2_FILE_STREAM_INFO structure

smb2.smb2_fs_info_01  SMB2_FS_INFO_01
    No value
    SMB2_FS_INFO_01 structure

smb2.smb2_fs_info_03  SMB2_FS_INFO_03
    No value
    SMB2_FS_INFO_03 structure

smb2.smb2_fs_info_04  SMB2_FS_INFO_04
    No value
    SMB2_FS_INFO_04 structure

smb2.smb2_fs_info_05  SMB2_FS_INFO_05
    No value
    SMB2_FS_INFO_05 structure

smb2.smb2_fs_info_06  SMB2_FS_INFO_06
    No value
    SMB2_FS_INFO_06 structure

smb2.smb2_fs_info_07  SMB2_FS_INFO_07
    No value
    SMB2_FS_INFO_07 structure

smb2.smb2_fs_objectid_info  SMB2_FS_OBJECTID_INFO
    No value
    SMB2_FS_OBJECTID_INFO structure

smb2.smb2_sec_info_00  SMB2_SEC_INFO_00
    No value
    SMB2_SEC_INFO_00 structure

smb2.tag  Tag
    String
    Tag of chain entry
```

smb2.tcon\_frame Connected in Frame  
Unsigned 32-bit integer  
Which frame this share was connected in

smb2.tid Tree Id  
Unsigned 32-bit integer  
SMB2 Tree Id

smb2.time Time from request  
Time duration  
Time between Request and Response for SMB2 cmds

smb2.tree Tree  
String  
Name of the Tree/Share

smb2.unknown unknown  
Byte array  
Unknown bytes

smb2.unknown.timestamp Timestamp  
Date/Time stamp  
Unknown timestamp

smb2.write\_data Write Data  
Byte array  
SMB2 Data to be written

smb2.write\_length Write Length  
Unsigned 32-bit integer  
Amount of data to write

smb2.write\_offset Write Offset  
Unsigned 64-bit integer  
At which offset to write the data

**SNA-over-Ethernet (snaeth)**

snaeth\_len Length  
Unsigned 16-bit integer  
Length of LLC payload

**SNMP Multiplex Protocol (smux)**

smux.pdutype PDU type  
Unsigned 8-bit integer

smux.version Version  
Unsigned 8-bit integer

**SPNEGO-KRB5 (spnego-krb5)****SPRAY (spray)**

spray.clock clock  
No value  
Clock

spray.counter counter  
Unsigned 32-bit integer  
Counter

```
spray.procedure_v1  V1 Procedure
    Unsigned 32-bit integer
    V1 Procedure

spray.sec  sec
    Unsigned 32-bit integer
    Seconds

spray.sprayarr  Data
    Byte array
    Sprayarr data

spray.usec  usec
    Unsigned 32-bit integer
    Microseconds
```

```

### Scripting Service Protocol (ssp)

```
ssprotocol.message_data  Data
                        Byte array
ssprotocol.message_flags  Flags
                        Unsigned 8-bit integer
ssprotocol.message_length  Length
                        Unsigned 16-bit integer
ssprotocol.message_status  Status
                        Unsigned 32-bit integer
ssprotocol.message_type  Type
                        Unsigned 8-bit integer
```

### Secure Socket Layer (ssl)

```
pct.handshake.cert  Cert
                    Unsigned 16-bit integer
                    PCT Certificate
pct.handshake.certspec  Cert Spec
                    No value
                    PCT Certificate specification
pct.handshake.cipher  Cipher
                    Unsigned 16-bit integer
                    PCT Cipher
pct.handshake.cipherspec  Cipher Spec
                    No value
                    PCT Cipher specification
pct.handshake.exch  Exchange
                    Unsigned 16-bit integer
                    PCT Exchange
pct.handshake.exhspec  Exchange Spec
                    No value
                    PCT Exchange specification
pct.handshake.hash  Hash
                    Unsigned 16-bit integer
                    PCT Hash
```

```
pct.handshake.hashspec  Hash Spec
    No value
    PCT Hash specification

pct.handshake.server_cert  Server Cert
    No value
    PCT Server Certificate

pct.handshake.sig  Sig Spec
    Unsigned 16-bit integer
    PCT Signature

pct.msg_error_code  PCT Error Code
    Unsigned 16-bit integer
    PCT Error Code

ssl.alert_message  Alert Message
    No value
    Alert message

ssl.alert_message.desc  Description
    Unsigned 8-bit integer
    Alert message description

ssl.alert_message.level  Level
    Unsigned 8-bit integer
    Alert message level

ssl.app_data  Encrypted Application Data
    Byte array
    Payload is encrypted application data

ssl.change_cipher_spec  Change Cipher Spec Message
    No value
    Signals a change in cipher specifications

ssl.handshake  Handshake Protocol
    No value
    Handshake protocol message

ssl.handshake.cert_type  Certificate type
    Unsigned 8-bit integer
    Certificate type

ssl.handshake.cert_types  Certificate types
    No value
    List of certificate types

ssl.handshake.cert_types_count  Certificate types count
    Unsigned 8-bit integer
    Count of certificate types

ssl.handshake.certificate  Certificate
    No value
    Certificate

ssl.handshake.certificate_length  Certificate Length
    Unsigned 24-bit integer
    Length of certificate

ssl.handshake.certificates  Certificates
    No value
    List of certificates
```

ssl.handshake.certificates\_length Certificates Length  
Unsigned 24-bit integer  
Length of certificates field

ssl.handshake.challenge Challenge  
No value  
Challenge data used to authenticate server

ssl.handshake.challenge\_length Challenge Length  
Unsigned 16-bit integer  
Length of challenge field

ssl.handshake.cipher\_spec\_len Cipher Spec Length  
Unsigned 16-bit integer  
Length of cipher specs field

ssl.handshake.cipher\_suites\_length Cipher Suites Length  
Unsigned 16-bit integer  
Length of cipher suites field

ssl.handshake.cipherspec Cipher Spec  
Unsigned 24-bit integer  
Cipher specification

ssl.handshake.ciphersuite Cipher Suite  
Unsigned 16-bit integer  
Cipher suite

ssl.handshake.ciphersuites Cipher Suites  
No value  
List of cipher suites supported by client

ssl.handshake.clear\_key\_data Clear Key Data  
No value  
Clear portion of MASTER-KEY

ssl.handshake.clear\_key\_length Clear Key Data Length  
Unsigned 16-bit integer  
Length of clear key data

ssl.handshake.comp\_method Compression Method  
Unsigned 8-bit integer  
Compression Method

ssl.handshake.comp\_methods Compression Methods  
No value  
List of compression methods supported by client

ssl.handshake.comp\_methods\_length Compression Methods Length  
Unsigned 8-bit integer  
Length of compression methods field

ssl.handshake.connection\_id Connection ID  
No value  
Server's challenge to client

ssl.handshake.connection\_id\_length Connection ID Length  
Unsigned 16-bit integer  
Length of connection ID

ssl.handshake.dname Distinguished Name  
No value  
Distinguished name of a CA that server trusts

ssl.handshake.dname\_len Distinguished Name Length  
Unsigned 16-bit integer  
Length of distinguished name

ssl.handshake.dnames Distinguished Names  
No value  
List of CAs that server trusts

ssl.handshake.dnames\_len Distinguished Names Length  
Unsigned 16-bit integer  
Length of list of CAs that server trusts

ssl.handshake.encrypted\_key Encrypted Key  
No value  
Secret portion of MASTER-KEY encrypted to server

ssl.handshake.encrypted\_key\_length Encrypted Key Data Length  
Unsigned 16-bit integer  
Length of encrypted key data

ssl.handshake.extension.data Data  
Byte array  
Hello Extension data

ssl.handshake.extension.len Length  
Unsigned 16-bit integer  
Length of a hello extension

ssl.handshake.extension.type Type  
Unsigned 16-bit integer  
Hello extension type

ssl.handshake.extensions\_length Extensions Length  
Unsigned 16-bit integer  
Length of hello extensions

ssl.handshake.key\_arg Key Argument  
No value  
Key Argument (e.g., Initialization Vector)

ssl.handshake.key\_arg\_length Key Argument Length  
Unsigned 16-bit integer  
Length of key argument

ssl.handshake.length Length  
Unsigned 24-bit integer  
Length of handshake message

ssl.handshake.md5\_hash MD5 Hash  
No value  
Hash of messages, master\_secret, etc.

ssl.handshake.random\_bytes random\_bytes  
Byte array  
Random challenge used to authenticate server

ssl.handshake.random\_time gmt\_unix\_time  
Date/Time stamp  
Unix time field of random structure

ssl.handshake.session\_id Session ID  
Byte array  
Identifies the SSL session, allowing later resumption

```
ssl.handshake.session_id_hit  Session ID Hit
    Boolean
    Did the server find the client's Session ID?
ssl.handshake.session_id_length  Session ID Length
    Unsigned 8-bit integer
    Length of session ID field
ssl.handshake.sha_hash  SHA-1 Hash
    No value
    Hash of messages, master_secret, etc.
ssl.handshake.type  Handshake Message Type
    Unsigned 8-bit integer
    SSLv2 handshake message type
ssl.handshake.verify_data  Verify Data
    No value
    Opaque verification data
ssl.handshake.version  Version
    Unsigned 16-bit integer
    Maximum version supported by client
ssl.pct_handshake.type  Handshake Message Type
    Unsigned 8-bit integer
    PCT handshake message type
ssl.reassembled_in  Reassembled PDU in frame
    Frame number
    The PDU that doesn't end in this segment is reassembled in this frame
ssl.record  Record Layer
    No value
    Record layer
ssl.record.content_type  Content Type
    Unsigned 8-bit integer
    Content type
ssl.record.is_escape  Is Escape
    Boolean
    Indicates a security escape
ssl.record.length  Length
    Unsigned 16-bit integer
    Length of SSL record data
ssl.record.padding_length  Padding Length
    Unsigned 8-bit integer
    Length of padding at end of record
ssl.record.version  Version
    Unsigned 16-bit integer
    Record layer version.
ssl.segment  SSL Segment
    Frame number
    SSL Segment
ssl.segment.error  Reassembling error
    Frame number
    Reassembling error due to illegal segments
```

ssl.segment.multipletails Multiple tail segments found  
Boolean  
Several tails were found when reassembling the pdu

ssl.segment.overlap Segment overlap  
Boolean  
Segment overlaps with other segments

ssl.segment.overlap.conflict Conflicting data in segment overlap  
Boolean  
Overlapping segments contained conflicting data

ssl.segment.toolongfragment Segment too long  
Boolean  
Segment contained data past end of the pdu

ssl.segments Reassembled SSL Segments  
No value  
SSL Segments

### Sequenced Packet Protocol (spp)

spp.ack Acknowledgment Number

    Unsigned 16-bit integer
    Length of Authentication Block
srvloc.daadvert.attrlist  Attribute List
    String
srvloc.daadvert.attrlistlen  Attribute List Length
    Unsigned 16-bit integer
srvloc.daadvert.authcount  Auths
    Unsigned 8-bit integer
    Number of Authentication Blocks
srvloc.daadvert.scopelist  Scope List
    String
srvloc.daadvert.scopelistlen  Scope List Length
    Unsigned 16-bit integer
    Length of the Scope List
srvloc.daadvert.slpspi  SLP SPI
    String
srvloc.daadvert.slpspilen  SLP SPI Length
    Unsigned 16-bit integer
    Length of the SLP SPI
srvloc.daadvert.timestamp  DAADVERT Timestamp
    Date/Time stamp
    Timestamp on DA Advert
srvloc.daadvert.url  URL
    String
srvloc.daadvert.urllen  URL Length
    Unsigned 16-bit integer
srvloc.err  Error Code
    Unsigned 16-bit integer
srvloc.errv2  Error Code
    Unsigned 16-bit integer
srvloc.flags_v1  Flags
    Unsigned 8-bit integer
srvloc.flags_v1.attribute_auth  Attribute Authentication
    Boolean
    Can whole packet fit into a datagram?
```

```
srvloc.flags_v1.fresh  Fresh Registration
    Boolean
    Is this a new registration?
srvloc.flags_v1.monolingual  Monolingual
    Boolean
    Can whole packet fit into a datagram?
srvloc.flags_v1.overflow.  Overflow
    Boolean
    Can whole packet fit into a datagram?
srvloc.flags_v1.url_auth  URL Authentication
    Boolean
    Can whole packet fit into a datagram?
srvloc.flags_v2  Flags
    Unsigned 16-bit integer
srvloc.flags_v2.fresh  Fresh Registration
    Boolean
    Is this a new registration?
srvloc.flags_v2.overflow  Overflow
    Boolean
    Can whole packet fit into a datagram?
srvloc.flags_v2.reqmulti  Multicast requested
    Boolean
    Do we want multicast?
srvloc.function  Function
    Unsigned 8-bit integer
srvloc.langtag  Lang Tag
    String
srvloc.langtaglen  Lang Tag Len
    Unsigned 16-bit integer
srvloc.list.ipaddr  IP Address
    IPv4 address
    IP Address of SLP server
srvloc.nextextoff  Next Extension Offset
    Unsigned 24-bit integer
srvloc.pktlen  Packet Length
    Unsigned 24-bit integer
srvloc.saadvert.attrlist  Attribute List
    String
srvloc.saadvert.attrlistlen  Attribute List Length
    Unsigned 16-bit integer
srvloc.saadvert.authcount  Auths
    Unsigned 8-bit integer
    Number of Authentication Blocks
srvloc.saadvert.scopelist  Scope List
    String
```

```
srvloc.saadvert.scopelistlen  Scope List Length
    Unsigned 16-bit integer
    Length of the Scope List
srvloc.saadvert.url           URL
    String
srvloc.saadvert.urllen       URL Length
    Unsigned 16-bit integer
srvloc.srvdereq.scopelist    Scope List
    String
srvloc.srvdereq.scopelistlen  Scope List Length
    Unsigned 16-bit integer
srvloc.srvdereq.taglist      Tag List
    String
srvloc.srvdereq.taglistlen    Tag List Length
    Unsigned 16-bit integer
srvloc.srvreq.attrauthcount   Attr Auths
    Unsigned 8-bit integer
    Number of Attribute Authentication Blocks
srvloc.srvreq.attrlist        Attribute List
    String
srvloc.srvreq.attrlistlen     Attribute List Length
    Unsigned 16-bit integer
srvloc.srvreq.predicate       Predicate
    String
srvloc.srvreq.predicatelen    Predicate Length
    Unsigned 16-bit integer
    Length of the Predicate
srvloc.srvreq.prlist          Previous Response List
    String
    Previous Response List
srvloc.srvreq.prlistlen       Previous Response List Length
    Unsigned 16-bit integer
    Length of Previous Response List
srvloc.srvreq.scopelist       Scope List
    String
srvloc.srvreq.scopelistlen    Scope List Length
    Unsigned 16-bit integer
    Length of the Scope List
srvloc.srvreq.slpspi          SLP SPI
    String
srvloc.srvreq.slpspilen       SLP SPI Length
    Unsigned 16-bit integer
    Length of the SLP SPI
srvloc.srvreq.srvtype         Service Type
    String
```

```
srvloc.srvreq.srvtypelen  Service Type Length
    Unsigned 16-bit integer
    Length of Service Type List
srvloc.srvreq.srvtypelist  Service Type List
    String
srvloc.srvreq.urlcount    Number of URLs
    Unsigned 16-bit integer
srvloc.srvrply.svcname    Service Name Value
    String
srvloc.srvtypereq.nameauthlist  Naming Authority List
    String
srvloc.srvtypereq.nameauthlistlen  Naming Authority List Length
    Unsigned 16-bit integer
    Length of the Naming Authority List
srvloc.srvtypereq.prlist  Previous Response List
    String
    Previous Response List
srvloc.srvtypereq.prlistlen  Previous Response List Length
    Unsigned 16-bit integer
    Length of Previous Response List
srvloc.srvtypereq.scopelist  Scope List
    String
srvloc.srvtypereq.scopelistlen  Scope List Length
    Unsigned 16-bit integer
    Length of the Scope List
srvloc.srvtypereq.srvtypelen  Service Type Length
    Unsigned 16-bit integer
    Length of the Service Type
srvloc.srvtypereq.srvtypelistlen  Service Type List Length
    Unsigned 16-bit integer
    Length of the Service Type List
srvloc.srvtyperply.srvtype  Service Type
    String
srvloc.srvtyperply.srvtypelist  Service Type List
    String
srvloc.url.lifetime      URL lifetime
    Unsigned 16-bit integer
srvloc.url.numauths      Num Auths
    Unsigned 8-bit integer
srvloc.url.reserved      Reserved
    Unsigned 8-bit integer
srvloc.url.url           URL
    String
srvloc.url.urllen        URL Length
    Unsigned 16-bit integer
```

```
srvloc.version  Version
                Unsigned 8-bit integer
srvloc.xid      XID
                Unsigned 24-bit integer
                Transaction ID
```

### **Session Announcement Protocol (sap)**

```
sap.auth        Authentication data
                No value
                Auth data
sap.auth.flags  Authentication data flags
                Unsigned 8-bit integer
                Auth flags
sap.auth.flags.p  Padding Bit
                Boolean
                Compression
sap.auth.flags.t  Authentication Type
                Unsigned 8-bit integer
                Auth type
sap.auth.flags.v  Version Number
                Unsigned 8-bit integer
                Version
sap.flags       Flags
                Unsigned 8-bit integer
                Bits in the beginning of the SAP header
sap.flags.a     Address Type
                Boolean
                Originating source address type
sap.flags.c     Compression Bit
                Boolean
                Compression
sap.flags.e     Encryption Bit
                Boolean
                Encryption
sap.flags.r     Reserved
                Boolean
                Reserved
sap.flags.t     Message Type
                Boolean
                Announcement type
sap.flags.v     Version Number
                Unsigned 8-bit integer
                3 bit version field in the SAP header
```

### **Session Description Protocol (sdp)**

```
ipbcpc.command  IPBCP Command Type
                String
                IPBCP Command Type
```

```
ipbcpc.version  IPBCP Protocol Version
String
IPBCP Protocol Version

sdp.bandwidth  Bandwidth Information (b)
String
Bandwidth Information

sdp.bandwidth.modifier  Bandwidth Modifier
String
Bandwidth Modifier

sdp.bandwidth.value  Bandwidth Value
String
Bandwidth Value (in kbits/s)

sdp.connection_info  Connection Information (c)
String
Connection Information

sdp.connection_info.address  Connection Address
String
Connection Address

sdp.connection_info.address_type  Connection Address Type
String
Connection Address Type

sdp.connection_info.network_type  Connection Network Type
String
Connection Network Type

sdp.connection_info.num_addr  Connection Number of Addresses
String
Connection Number of Addresses

sdp.connection_info.ttl  Connection TTL
String
Connection TTL

sdp.email  E-mail Address (e)
String
E-mail Address

sdp.encryption_key  Encryption Key (k)
String
Encryption Key

sdp.encryption_key.data  Key Data
String
Data

sdp.encryption_key.type  Key Type
String
Type

sdp.fmtph263profile  Profile
Unsigned 32-bit integer
Profile

sdp.fmtph264_packetization_mode  Packetization mode
Unsigned 32-bit integer
Packetization mode
```

```
sdp.fmtmp.parameter  Media format specific parameters
    String
    Format specific parameter(fmtmp)
sdp.fmtmp.profile_level_id  Level Code
    Unsigned 32-bit integer
    Level Code
sdp.h223LogicalChannelParameters  h223LogicalChannelParameters
    No value
    sdp.h223LogicalChannelParameters
sdp.h264.sprop_parameter_sets  Sprop_parameter_sets
    Byte array
    Sprop_parameter_sets
sdp.invalid  Invalid line
    String
    Invalid line
sdp.key_mgmt  Key Management
    String
    Key Management
sdp.key_mgmt.data  Key Management Data
    Byte array
    Key Management Data
sdp.key_mgmt.kmpid  Key Management Protocol (kmpid)
    String
    Key Management Protocol
sdp.media  Media Description, name and address (m)
    String
    Media Description, name and address
sdp.media.format  Media Format
    String
    Media Format
sdp.media.media  Media Type
    String
    Media Type
sdp.media.port  Media Port
    Unsigned 16-bit integer
    Media Port
sdp.media.portcount  Media Port Count
    String
    Media Port Count
sdp.media.proto  Media Proto
    String
    Media Protocol
sdp.media_attr  Media Attribute (a)
    String
    Media Attribute
sdp.media_attribute.field  Media Attribute Fieldname
    String
    Media Attribute Fieldname
```

```
sdp.media_attribute.value  Media Attribute Value
    String
    Media Attribute Value
sdp.media_title  Media Title (i)
    String
    Media Title
sdp.mime.type  MIME Type
    String
    SDP MIME Type
sdp.owner  Owner/Creator, Session Id (o)
    String
    Owner/Creator, Session Id
sdp.owner.address  Owner Address
    String
    Owner Address
sdp.owner.address_type  Owner Address Type
    String
    Owner Address Type
sdp.owner.network_type  Owner Network Type
    String
    Owner Network Type
sdp.owner.sessionid  Session ID
    String
    Session ID
sdp.owner.username  Owner Username
    String
    Owner Username
sdp.owner.version  Session Version
    String
    Session Version
sdp.phone  Phone Number (p)
    String
    Phone Number
sdp.repeat_time  Repeat Time (r)
    String
    Repeat Time
sdp.repeat_time.duration  Repeat Duration
    String
    Repeat Duration
sdp.repeat_time.interval  Repeat Interval
    String
    Repeat Interval
sdp.repeat_time.offset  Repeat Offset
    String
    Repeat Offset
sdp.session_attr  Session Attribute (a)
    String
    Session Attribute
```

```
sdp.session_attr.field  Session Attribute Fieldname
    String
    Session Attribute Fieldname
sdp.session_attr.value  Session Attribute Value
    String
    Session Attribute Value
sdp.session_info        Session Information (i)
    String
    Session Information
sdp.session_name        Session Name (s)
    String
    Session Name
sdp.time                 Time Description, active time (t)
    String
    Time Description, active time
sdp.time.start          Session Start Time
    String
    Session Start Time
sdp.time.stop           Session Stop Time
    String
    Session Stop Time
sdp.timezone            Time Zone Adjustments (z)
    String
    Time Zone Adjustments
sdp.timezone.offset     Timezone Offset
    String
    Timezone Offset
sdp.timezone.time       Timezone Time
    String
    Timezone Time
sdp.unknown             Unknown
    String
    Unknown
sdp.uri                 URI of Description (u)
    String
    URI of Description
sdp.version             Session Description Protocol Version (v)
    String
    Session Description Protocol Version
```

**Session Initiation Protocol (sip)**

```
raw_sip.line           Raw SIP Line
    String
    Raw SIP Line
sip.Accept              Accept
    String
    RFC 3261: Accept Header
```

```
sip.Accept-Contact  Accept-Contact
    String
    RFC 3841: Accept-Contact Header
sip.Accept-Encoding  Accept-Encoding
    String
    RFC 3841: Accept-Encoding Header
sip.Accept-Language  Accept-Language
    String
    RFC 3261: Accept-Language Header
sip.Accept-Resource-Priority  Accept-Resource-Priority
    String
    Draft: Accept-Resource-Priority Header
sip.Alert-Info  Alert-Info
    String
    RFC 3261: Alert-Info Header
sip.Allow  Allow
    String
    RFC 3261: Allow Header
sip.Allow-Events  Allow-Events
    String
    RFC 3265: Allow-Events Header
sip.Authentication-Info  Authentication-Info
    String
    RFC 3261: Authentication-Info Header
sip.Authorization  Authorization
    String
    RFC 3261: Authorization Header
sip.CSeq  CSeq
    String
    RFC 3261: CSeq Header
sip.CSeq.method  Method
    String
    CSeq header method
sip.CSeq.seq  Sequence Number
    Unsigned 32-bit integer
    CSeq header sequence number
sip.Call-ID  Call-ID
    String
    RFC 3261: Call-ID Header
sip.Call-Info  Call-Info
    String
    RFC 3261: Call-Info Header
sip.Contact  Contact
    String
    RFC 3261: Contact Header
sip.Content-Disposition  Content-Disposition
    String
    RFC 3261: Content-Disposition Header
```

```
sip.Content-Encoding  Content-Encoding
    String
    RFC 3261: Content-Encoding Header

sip.Content-Language  Content-Language
    String
    RFC 3261: Content-Language Header

sip.Content-Length    Content-Length
    Unsigned 32-bit integer
    RFC 3261: Content-Length Header

sip.Content-Type      Content-Type
    String
    RFC 3261: Content-Type Header

sip.Date              Date
    String
    RFC 3261: Date Header

sip.ETag              ETag
    String
    RFC 3903: SIP-ETag Header

sip.Error-Info        Error-Info
    String
    RFC 3261: Error-Info Header

sip.Event              Event
    String
    RFC 3265: Event Header

sip.Expires            Expires
    Unsigned 32-bit integer
    RFC 3261: Expires Header

sip.From              From
    String
    RFC 3261: From Header

sip.History-Info      History-Info
    String
    RFC 4244: Request History Information

sip.Identity           Identity
    String
    RFC 4474: Request Identity

sip.Identity-info     Identity-info
    String
    RFC 4474: Request Identity-info

sip.If_Match          If_Match
    String
    RFC 3903: SIP-If-Match Header

sip.In-Reply-To       In-Reply-To
    String
    RFC 3261: In-Reply-To Header

sip.Join              Join
    String
    Draft: Join Header
```

```
sip.MIME-Version  MIME-Version
    String
    RFC 3261: MIME-Version Header

sip.Max-Forwards  Max-Forwards
    Unsigned 32-bit integer
    RFC 3261: Max-Forwards Header

sip.Method        Method
    String
    SIP Method

sip.Min-Expires   Min-Expires
    String
    RFC 3261: Min-Expires Header

sip.Min-SE        Min-SE
    String
    Draft: Min-SE Header

sip.Organization  Organization
    String
    RFC 3261: Organization Header

sip.P-Access-Network-Info  P-Access-Network-Info
    String
    P-Access-Network-Info Header

sip.P-Answer-State  P-Answer-State
    String
    P-Answer-State Header

sip.P-Asserted-Identity  P-Asserted-Identity
    String
    RFC 3325: P-Asserted-Identity Header

sip.P-Associated-URI  P-Associated-URI
    String
    RFC 3455: P-Associated-URI Header

sip.P-Called-Party-ID  P-Called-Party-ID
    String
    RFC 3455: P-Called-Party-ID Header

sip.P-Charging-Function-Addresses  P-Charging-Function-Addresses
    String
    P-Charging-Function-Addresses

sip.P-Charging-Vector  P-Charging-Vector
    String
    P-Charging-Vector Header

sip.P-DCS-Billing-Info  P-DCS-Billing-Info
    String
    P-DCS-Billing-Info Header

sip.P-DCS-LAES  P-DCS-LAES
    String
    P-DCS-LAES Header

sip.P-DCS-OSPS  P-DCS-OSPS
    String
    P-DCS-OSPS Header
```

```
sip.P-DCS-Redirect P-DCS-Redirect
String
P-DCS-Redirect Header

sip.P-DCS-Trace-Party-ID P-DCS-Trace-Party-ID
String
P-DCS-Trace-Party-ID Header

sip.P-Early-Media P-Early-Media
String
P-Early-Media Header

sip.P-Media-Authorization P-Media-Authorization
String
RFC 3313: P-Media-Authorization Header

```

**Short Frame (short)****Short Message Peer to Peer (smpp)**

```

smpp.SC_interface_version  SMSC-supported version
String
Version of SMPP interface supported by the SMSC.

smpp.additional_status_info_text  Information
String
Description of the meaning of a response PDU.

smpp.addr_npi  Numbering plan indicator
Unsigned 8-bit integer
Gives the numbering plan this address belongs to.

smpp.addr_ton  Type of number
Unsigned 8-bit integer
Indicates the type of number, given in the address.

```

smpp.address\_range Address  
String  
Given address or address range.

smpp.alert\_on\_message\_delivery Alert on delivery  
No value  
Instructs the handset to alert user on message delivery.

smpp.callback\_num Callback number  
No value  
Associates a call back number with the message.

smpp.callback\_num.pres Presentation  
Unsigned 8-bit integer  
Controls the presentation indication.

smpp.callback\_num.scrn Screening  
Unsigned 8-bit integer  
Controls screening of the callback-number.

smpp.callback\_num\_atag Callback number - alphanumeric display tag  
No value  
Associates an alphanumeric display with call back number.

smpp.command\_id Operation  
Unsigned 32-bit integer  
Defines the SMPP PDU.

smpp.command\_length Length  
Unsigned 32-bit integer  
Total length of the SMPP PDU.

smpp.command\_status Result  
Unsigned 32-bit integer  
Indicates success or failure of the SMPP request.

smpp.data\_coding Data coding  
Unsigned 8-bit integer  
Defines the encoding scheme of the message.

smpp.dcs SMPP Data Coding Scheme  
Unsigned 8-bit integer  
Data Coding Scheme according to SMPP.

smpp.dcs.cbs\_class DCS CBS Message class  
Unsigned 8-bit integer  
Specifies the message class for GSM Cell Broadcast Service, for the Data cod

smpp.dcs.cbs\_coding\_group DCS Coding Group for CBS  
Unsigned 8-bit integer  
Data Coding Scheme coding group for GSM Cell Broadcast Service.

smpp.dcs.cbs\_language DCS CBS Message language  
Unsigned 8-bit integer  
Language of the GSM Cell Broadcast Service message.

smpp.dcs.charset DCS Character set  
Unsigned 8-bit integer  
Specifies the character set used in the message.

smpp.dcs.class DCS Message class  
Unsigned 8-bit integer  
Specifies the message class.

smpp.dcs.class\_present DCS Class present  
Boolean  
Indicates if the message class is present (defined).

smpp.dcs.sms\_coding\_group DCS Coding Group for SMS  
Unsigned 8-bit integer  
Data Coding Scheme coding group for GSM Short Message Service.

smpp.dcs.text\_compression DCS Text compression  
Boolean  
Indicates if text compression is used.

smpp.dcs.wap\_class DCS CBS Message class  
Unsigned 8-bit integer  
Specifies the message class for GSM Cell Broadcast Service, as specified by

smpp.dcs.wap\_coding DCS Message coding  
Unsigned 8-bit integer  
Specifies the used message encoding, as specified by the WAP Forum (WAP over

smpp.delivery\_failure\_reason Delivery failure reason  
Unsigned 8-bit integer  
Indicates the reason for a failed delivery attempt.

smpp.dest\_addr\_npi Numbering plan indicator (recipient)  
Unsigned 8-bit integer  
Gives recipient numbering plan this address belongs to.

smpp.dest\_addr\_subunit Subunit destination  
Unsigned 8-bit integer  
Subunit address within mobile to route message to.

smpp.dest\_addr\_ton Type of number (recipient)  
Unsigned 8-bit integer  
Indicates recipient type of number, given in the address.

smpp.dest\_bearer\_type Destination bearer  
Unsigned 8-bit integer  
Desired bearer for delivery of message.

smpp.dest\_network\_type Destination network  
Unsigned 8-bit integer  
Network associated with the destination address.

smpp.dest\_subaddress Destination Subaddress  
Byte array  
Destination Subaddress

smpp.dest\_telematics\_id Telematic interworking (dest)  
Unsigned 16-bit integer  
Telematic interworking to be used for message delivery.

smpp.destination\_addr Recipient address  
String  
Address of SME receiving this message.

smpp.destination\_port Destination port  
Unsigned 16-bit integer  
Application port associated with the destination of the message.

smpp.display\_time Display time  
Unsigned 8-bit integer  
Associates a display time with the message on the handset.

smpp.dl\_name Distr. list name  
String  
The name of the distribution list.

smpp.dlist Destination list  
No value  
The list of destinations for a short message.

smpp.dlist\_resp Unsuccessful delivery list  
No value  
The list of unsuccessful deliveries to destinations.

smpp.dpf\_result Delivery pending set?  
Unsigned 8-bit integer  
Indicates whether Delivery Pending Flag was set.

smpp.error\_code Error code  
Unsigned 8-bit integer  
Network specific error code defining reason for failure.

smpp.error\_status\_code Status  
Unsigned 32-bit integer  
Indicates success/failure of request for this address.

smpp.esm.submit.features GSM features  
Unsigned 8-bit integer  
GSM network specific features.

smpp.esm.submit.msg\_mode Messaging mode  
Unsigned 8-bit integer  
Mode attribute for this message.

smpp.esm.submit.msg\_type Message type  
Unsigned 8-bit integer  
Type attribute for this message.

smpp.esme\_addr ESME address  
String  
Address of ESME originating this message.

smpp.esme\_addr\_npi Numbering plan indicator (ESME)  
Unsigned 8-bit integer  
Gives the numbering plan this address belongs to.

smpp.esme\_addr\_ton Type of number (ESME)  
Unsigned 8-bit integer  
Indicates recipient type of number, given in the address.

smpp.final\_date Final date  
Date/Time stamp  
Date-time when the queried message reached a final state.

smpp.final\_date\_r Final date  
Time duration  
Date-time when the queried message reached a final state.

smpp.interface\_version Version (if)  
String  
Version of SMPP interface supported.

smpp.its\_reply\_type Reply method  
Unsigned 8-bit integer  
Indicates the handset reply method on message receipt.

smpp.its\_session.ind Session indicator  
Unsigned 8-bit integer  
Indicates whether this message is end of conversation.

smpp.its\_session.number Session number  
Unsigned 8-bit integer  
Session number of interactive teleservice.

smpp.its\_session.sequence Sequence number  
Unsigned 8-bit integer  
Sequence number of the dialogue unit.

smpp.language\_indicator Language  
Unsigned 8-bit integer  
Indicates the language of the short message.

smpp.message Message  
No value  
The actual message or data.

smpp.message\_id Message id.  
String  
Identifier of the submitted short message.

smpp.message\_payload Payload  
No value  
Short message user data.

smpp.message\_state Message state  
Unsigned 8-bit integer  
Specifies the status of the queried short message.

smpp.more\_messages\_to\_send More messages?  
Unsigned 8-bit integer  
Indicates more messages pending for the same destination.

smpp.ms\_availability\_status Availability status  
Unsigned 8-bit integer  
Indicates the availability state of the handset.

smpp.ms\_validity Validity info  
Unsigned 8-bit integer  
Associates validity info with the message on the handset.

smpp.msg\_wait.ind Indication  
Unsigned 8-bit integer  
Indicates to the handset that a message is waiting.

smpp.msg\_wait.type Type  
Unsigned 8-bit integer  
Indicates type of message that is waiting.

smpp.network\_error.code Error code  
Unsigned 16-bit integer  
Gives the actual network error code.

smpp.network\_error.type Error type  
Unsigned 8-bit integer  
Indicates the network type.

smpp.number\_of\_messages Number of messages  
Unsigned 8-bit integer  
Indicates number of messages stored in a mailbox.

smpp.opt\_param Optional parameters  
No value  
The list of optional parameters in this operation.

smpp.password Password  
String  
Password used for authentication.

smpp.payload\_type Payload  
Unsigned 8-bit integer  
PDU type contained in the message payload.

smpp.priority\_flag Priority level  
Unsigned 8-bit integer  
The priority level of the short message.

smpp.privacy\_indicator Privacy indicator  
Unsigned 8-bit integer  
Indicates the privacy level of the message.

smpp.protocol\_id Protocol id.  
Unsigned 8-bit integer  
Protocol identifier according GSM 03.40.

smpp.qos\_time\_to\_live Validity period  
Unsigned 32-bit integer  
Number of seconds to retain message before expiry.

smpp.receipted\_message\_id SMSC identifier  
String  
SMSC handle of the message being received.

smpp.regdel.acks Message type  
Unsigned 8-bit integer  
SME acknowledgement request.

smpp.regdel.notif Intermediate notif  
Unsigned 8-bit integer  
Intermediate notification request.

smpp.regdel.receipt Delivery receipt  
Unsigned 8-bit integer  
SMSC delivery receipt request.

smpp.replace\_if\_present\_flag Replace  
Unsigned 8-bit integer  
Replace the short message with this one or not.

smpp.reserved\_op Optional parameter - Reserved  
No value  
An optional parameter that is reserved in this version.

smpp.sar\_msg\_ref\_num SAR reference number  
Unsigned 16-bit integer  
Reference number for a concatenated short message.

smpp.sar\_segment\_seqnum SAR sequence number  
Unsigned 8-bit integer  
Segment number within a concatenated short message.

smpp.sar\_total\_segments SAR size  
Unsigned 16-bit integer  
Number of segments of a concatenated short message.

smpp.schedule\_delivery\_time Scheduled delivery time  
Date/Time stamp  
Scheduled time for delivery of short message.

smpp.schedule\_delivery\_time\_r Scheduled delivery time  
Time duration  
Scheduled time for delivery of short message.

smpp.sequence\_number Sequence #  
Unsigned 32-bit integer  
A number to correlate requests with responses.

smpp.service\_type Service type  
String  
SMS application service associated with the message.

smpp.set\_dpf Request DPF set  
Unsigned 8-bit integer  
Request to set the DPF for certain failure scenario's.

smpp.sm\_default\_msg\_id Predefined message  
Unsigned 8-bit integer  
Index of a predefined ('canned') short message.

smpp.sm\_length Message length  
Unsigned 8-bit integer  
Length of the message content.

smpp.sms\_signal SMS signal  
Unsigned 16-bit integer  
Alert the user according to the information contained within this information

smpp.source\_addr Originator address  
String  
Address of SME originating this message.

smpp.source\_addr\_npi Numbering plan indicator (originator)  
Unsigned 8-bit integer  
Gives originator numbering plan this address belongs to.

smpp.source\_addr\_subunit Subunit origin  
Unsigned 8-bit integer  
Subunit address within mobile that generated the message.

smpp.source\_addr\_ton Type of number (originator)  
Unsigned 8-bit integer  
Indicates originator type of number, given in the address.

smpp.source\_bearer\_type Originator bearer  
Unsigned 8-bit integer  
Bearer over which the message originated.

smpp.source\_network\_type Originator network  
Unsigned 8-bit integer  
Network associated with the originator address.

smpp.source\_port Source port  
Unsigned 16-bit integer  
Application port associated with the source of the message.

smpp.source\_subaddress Source Subaddress  
Byte array  
Source Subaddress

smpp.source\_telematics\_id Telematic interworking (orig)  
Unsigned 16-bit integer  
Telematic interworking used for message submission.

smpp.system\_id System ID  
String  
Identifies a system.

smpp.system\_type System type  
String  
Categorises the system.

smpp.user\_message\_reference Message reference  
Unsigned 16-bit integer  
Reference to the message, assigned by the user.

smpp.user\_response\_code Application response code  
Unsigned 8-bit integer  
A response code set by the user.

smpp.usssd\_service\_op USSD service operation  
Unsigned 8-bit integer  
Indicates the USSD service operation.

smpp.validity\_period Validity period  
Date/Time stamp  
Validity period of this message.

smpp.validity\_period\_r Validity period  
Time duration  
Validity period of this message.

smpp.vendor\_op Optional parameter - Vendor-specific  
No value  
A supplied optional parameter specific to an SMSC-vendor.

#### **Short Message Relaying Service (smrse)**

smrse.address\_type address-type  
Signed 32-bit integer  
smrse.T\_address\_type

smrse.address\_value address-value  
Unsigned 32-bit integer  
smrse.T\_address\_value

smrse.alerting\_MS\_ISDN alerting-MS-ISDN  
No value  
smrse.SMS\_Address

smrse.connect\_fail\_reason connect-fail-reason  
Signed 32-bit integer  
smrse.Connect\_fail

smrse.error\_reason error-reason  
Signed 32-bit integer  
smrse.Error\_reason

smrse.length Length  
Unsigned 16-bit integer  
Length of SMRSE PDU

```
smrse.message_reference  message-reference
    Unsigned 32-bit integer
    smrse.RP_MR

smrse.mo_message_reference  mo-message-reference
    Unsigned 32-bit integer
    smrse.RP_MR

smrse.mo_originating_address  mo-originating-address
    No value
    smrse.SMS_Address

smrse.mo_user_data  mo-user-data
    Byte array
    smrse.RP_UD

smrse.moimsi  moimsi
    Byte array
    smrse.IMSI_Address

smrse.ms_address  ms-address
    No value
    smrse.SMS_Address

smrse.msg_waiting_set  msg-waiting-set
    Boolean
    smrse.BOOLEAN

smrse.mt_destination_address  mt-destination-address
    No value
    smrse.SMS_Address

smrse.mt_message_reference  mt-message-reference
    Unsigned 32-bit integer
    smrse.RP_MR

smrse.mt_mms  mt-mms
    Boolean
    smrse.BOOLEAN

smrse.mt_origVMSCAddr  mt-origVMSCAddr
    No value
    smrse.SMS_Address

smrse.mt_originating_address  mt-originating-address
    No value
    smrse.SMS_Address

smrse.mt_priority_request  mt-priority-request
    Boolean
    smrse.BOOLEAN

smrse.mt_tariffClass  mt-tariffClass
    Unsigned 32-bit integer
    smrse.SM_TC

smrse.mt_user_data  mt-user-data
    Byte array
    smrse.RP_UD

smrse.numbering_plan  numbering-plan
    Signed 32-bit integer
    smrse.T_numbering_plan
```

```

smrse.octet_Format  octet-Format
    String
    SMS-Address/address-value/octet-format

smrse.octet_format  octet-format
    Byte array
    smrse.T_octet_format

smrse.origVMSCAddr  origVMSCAddr
    No value
    smrse.SMS_Address

smrse.password      password
    String
    smrse.Password

smrse.reserved      Reserved
    Unsigned 8-bit integer
    Reserved byte, must be 126

smrse.sc_address    sc-address
    No value
    smrse.SMS_Address

smrse.sm_diag_info  sm-diag-info
    Byte array
    smrse.RP_UD

smrse.tag            Tag
    Unsigned 8-bit integer
    Tag

```

### Signaling Compression (sigcomp)

```

sigcomp.addr.output.start  %Output_start[memory address]
    Unsigned 16-bit integer
    Output start

sigcomp.code.len          Code length
    Unsigned 16-bit integer
    Code length

sigcomp.compression-ratio  Compression ratio (%)
    Unsigned 32-bit integer
    Compression ratio (decompressed / compressed) %

sigcomp.destination       Destination
    Unsigned 8-bit integer
    Destination

sigcomp.length            Partial state id length
    Unsigned 8-bit integer
    Sigcomp length

sigcomp.memory_size       Memory size
    Unsigned 16-bit integer
    Memory size

sigcomp.min.acc.len       %Minimum access length
    Unsigned 16-bit integer
    Minimum access length

```

```
sigcomp.nack.cycles_per_bit  Cycles Per Bit
    Unsigned 8-bit integer
    NACK Cycles Per Bit

sigcomp.nack.failed_op_code  OPCODE of failed instruction
    Unsigned 8-bit integer
    NACK OPCODE of failed instruction

sigcomp.nack.pc              PC of failed instruction
    Unsigned 16-bit integer
    NACK PC of failed instruction

sigcomp.nack.reason          Reason Code
    Unsigned 8-bit integer
    NACK Reason Code

sigcomp.nack.shal            SHA-1 Hash of failed message
    Byte array
    NACK SHA-1 Hash of failed message

sigcomp.nack.state_id        State ID (6 - 20 bytes)
    Byte array
    NACK State ID (6 - 20 bytes)

sigcomp.nack.ver             NACK Version
    Unsigned 8-bit integer
    NACK Version

sigcomp.output.length        %Output_length
    Unsigned 16-bit integer
    Output length

sigcomp.output.length.addr    %Output_length[memory address]
    Unsigned 16-bit integer
    Output length

sigcomp.output.start         %Output_start
    Unsigned 16-bit integer
    Output start

sigcomp.partial.state.identifier  Partial state identifier
    String
    Partial state identifier

sigcomp.remaining-bytes      Remaining SigComp message bytes
    Unsigned 32-bit integer
    Number of bytes remaining in message

sigcomp.req.feedback.loc     %Requested feedback location
    Unsigned 16-bit integer
    Requested feedback location

sigcomp.ret.param.loc        %Returned parameters location
    Unsigned 16-bit integer
    Returned parameters location

sigcomp.returned.feedback.item  Returned_feedback item
    Byte array
    Returned feedback item

sigcomp.returned.feedback.item.len  Returned feedback item length
    Unsigned 8-bit integer
    Returned feedback item length
```

```
sigcomp.t.bit    T bit
                Unsigned 8-bit integer
                Sigcomp T bit

sigcomp.udvm.addr.destination  %Destination[memory address]
                Unsigned 16-bit integer
                Destination

sigcomp.udvm.addr.j    %j[memory address]
                Unsigned 16-bit integer
                j

sigcomp.udvm.addr.length  %Length[memory address]
                Unsigned 16-bit integer
                Length

sigcomp.udvm.addr.offset  %Offset[memory address]
                Unsigned 16-bit integer
                Offset

sigcomp.udvm.at.address  @Address(mem_add_of_inst + D) mod 2^16)
                Unsigned 16-bit integer
                Address

sigcomp.udvm.bits    %Bits
                Unsigned 16-bit integer
                Bits

sigcomp.udvm.byte-code  Uploaded UDVM bytecode
                No value
                Uploaded UDVM bytecode

sigcomp.udvm.destination  %Destination
                Unsigned 16-bit integer
                Destination

sigcomp.udvm.execution-trace  UDVM execution trace
                No value
                UDVM execution trace

sigcomp.udvm.instr  UDVM instruction code
                Unsigned 8-bit integer
                UDVM instruction code

sigcomp.udvm.j    %j
                Unsigned 16-bit integer
                j

sigcomp.udvm.length  %Length
                Unsigned 16-bit integer
                Length

sigcomp.udvm.lit.bytecode  UDVM bytecode
                Unsigned 8-bit integer
                UDVM bytecode

sigcomp.udvm.literal-num  #n
                Unsigned 16-bit integer
                Literal number

sigcomp.udvm.lower.bound  %Lower bound
                Unsigned 16-bit integer
                Lower_bound
```

```

sigcomp.udvm.multyt.bytecode  UDVM bytecode
    Unsigned 8-bit integer
    UDVM bytecode

sigcomp.udvm.offset    %Offset
    Unsigned 16-bit integer
    Offset

sigcomp.udvm.operand  UDVM operand
    Unsigned 16-bit integer
    UDVM operand

sigcomp.udvm.operand.1  $Operand 1[memory address]
    Unsigned 16-bit integer
    Reference $ Operand 1

sigcomp.udvm.operand.2  %Operand 2
    Unsigned 16-bit integer
    Operand 2

sigcomp.udvm.operand.2.addr  %Operand 2[memory address]
    Unsigned 16-bit integer
    Operand 2

sigcomp.udvm.partial.identifier.length  %Partial identifier length
    Unsigned 16-bit integer
    Partial identifier length

sigcomp.udvm.partial.identifier.start  %Partial identifier start
    Unsigned 16-bit integer
    Partial identifier start

sigcomp.udvm.position  %Position
    Unsigned 16-bit integer
    Position

sigcomp.udvm.ref.bytecode  UDVM bytecode
    Unsigned 8-bit integer
    UDVM bytecode

sigcomp.udvm.ref.destination  $Destination[memory address]
    Unsigned 16-bit integer
    (reference)Destination

sigcomp.udvm.start.address  %State address
    Unsigned 16-bit integer
    State address

sigcomp.udvm.start.address.addr  %State address[memory address]
    Unsigned 16-bit integer
    State address

sigcomp.udvm.start.instr  %State instruction
    Unsigned 16-bit integer
    State instruction

sigcomp.udvm.start.value  %Start value
    Unsigned 16-bit integer
    Start value

sigcomp.udvm.state.begin  %State begin
    Unsigned 16-bit integer
    State begin

```

```

sigcomp.udvm.state.length    %State length
    Unsigned 16-bit integer
    State length

sigcomp.udvm.state.length.addr    %State length[memory address]
    Unsigned 16-bit integer
    State length

sigcomp.udvm.state.ret.pri    %State retention priority
    Unsigned 16-bit integer
    State retention priority

sigcomp.udvm.uncompressed    %Uncompressed
    Unsigned 16-bit integer
    Uncompressed

sigcomp.udvm.upper.bound    %Upper bound
    Unsigned 16-bit integer
    Upper bound

sigcomp.udvm.value    %Value
    Unsigned 16-bit integer
    Value

```

    Unsigned 8-bit integer
sccp.rsn  Receive Sequence Number
    Unsigned 8-bit integer
sccp.segmentation.class  Segmentation: Class
    Unsigned 8-bit integer
sccp.segmentation.first  Segmentation: First
    Unsigned 8-bit integer
sccp.segmentation.remaining  Segmentation: Remaining
    Unsigned 8-bit integer
sccp.segmentation.slr  Segmentation: Source Local Reference
    Unsigned 24-bit integer
sccp.sequencing_segmenting.more  Sequencing Segmenting: More
    Unsigned 8-bit integer
sccp.sequencing_segmenting.rsn  Sequencing Segmenting: Receive Sequence Number
    Unsigned 8-bit integer
sccp.sequencing_segmenting.ssn  Sequencing Segmenting: Send Sequence Number
    Unsigned 8-bit integer
sccp.slr  Source Local Reference
    Unsigned 24-bit integer
sccp.ssn  Called or Calling SubSystem Number
    Unsigned 8-bit integer
sccp.variable_pointer1  Pointer to first Mandatory Variable parameter
    Unsigned 16-bit integer
sccp.variable_pointer2  Pointer to second Mandatory Variable parameter
    Unsigned 16-bit integer
```

sccp.variable\_pointer3 Pointer to third Mandatory Variable parameter  
Unsigned 16-bit integer

#### Signalling Connection Control Part Management (sccpmg)

sccpmg.ansi\_pc Affected Point Code  
String

sccpmg.chinese\_pc Affected Point Code  
String

sccpmg.cluster Affected PC Cluster  
Unsigned 24-bit integer

sccpmg.congestion SCCP Congestion Level (ITU)  
Unsigned 8-bit integer

sccpmg.member Affected PC Member  
Unsigned 24-bit integer

sccpmg.message\_type Message Type  
Unsigned 8-bit integer

sccpmg.network Affected PC Network  
Unsigned 24-bit integer

sccpmg.pc Affected Point Code  
Unsigned 16-bit integer

sccpmg.smi Subsystem Multiplicity Indicator  
Unsigned 8-bit integer

sccpmg.ssn Affected SubSystem Number  
Unsigned 8-bit integer

#### Simple Mail Transfer Protocol (smtp)

smtp.data.fragment DATA fragment  
Frame number  
Message fragment

smtp.data.fragment.error DATA defragmentation error  
Frame number  
Message defragmentation error

smtp.data.fragment.multiple\_tails DATA has multiple tail fragments  
Boolean  
Message has multiple tail fragments

smtp.data.fragment.overlap DATA fragment overlap  
Boolean  
Message fragment overlap

smtp.data.fragment.overlap.conflicts DATA fragment overlapping with conflicting  
Boolean  
Message fragment overlapping with conflicting data

smtp.data.fragment.too\_long\_fragment DATA fragment too long  
Boolean  
Message fragment too long

smtp.data.fragments DATA fragments  
No value  
Message fragments

```

smtp.data.reassembled.in  Reassembled DATA in frame
                          Frame number
                          This DATA fragment is reassembled in this frame

smtp.req  Request
          Boolean

smtp.req.command  Command
                 String

smtp.req.parameter  Request parameter
                   String

smtp.response.code  Response code
                   Unsigned 32-bit integer

smtp.rsp  Response
          Boolean

smtp.rsp.parameter  Response parameter
                   String

```

### Simple Network Management Protocol (snmp)

```

snmp.SMUX_PDUs  SMUX-PDUs
                Unsigned 32-bit integer
                snmp.SMUX_PDUs

snmp.VarBindList_item  Item
                       No value
                       snmp.VarBind

snmp.agent_addr  agent-addr
                 IPv4 address
                 snmp.NetworkAddress

snmp.close  close
            Signed 32-bit integer
            snmp.ClosePDU

snmp.commitOrRollback  commitOrRollback
                       Signed 32-bit integer
                       snmp.SOutPDU

snmp.community  community
                String
                snmp.OCTET_STRING

snmp.contextEngineID  contextEngineID
                      Byte array
                      snmp.SnmpEngineID

snmp.contextName  contextName
                  Byte array
                  snmp.OCTET_STRING

snmp.data  data
           Unsigned 32-bit integer
           snmp.PDUs

snmp.datav2u  datav2u
              Unsigned 32-bit integer
              snmp.T_datav2u

```

```
snmp.decrypted_pdu  Decrypted ScopedPDU
    Byte array
    Decrypted PDU

snmp.description  description
    Byte array
    snmp.DisplayString

snmp.encrypted  encrypted
    Byte array
    snmp.OCTET_STRING

snmp.encryptedPDU  encryptedPDU
    Byte array
    snmp.T_encryptedPDU

snmp.endOfMibView  endOfMibView
    No value

snmp.engineid.conform  Engine ID Conformance
    Boolean
    Engine ID RFC3411 Conformance

snmp.engineid.data  Engine ID Data
    Byte array
    Engine ID Data

snmp.engineid.enterprise  Engine Enterprise ID
    Unsigned 32-bit integer
    Engine Enterprise ID

snmp.engineid.format  Engine ID Format
    Unsigned 8-bit integer
    Engine ID Format

snmp.engineid.ipv4  Engine ID Data: IPv4 address
    IPv4 address
    Engine ID Data: IPv4 address

snmp.engineid.ipv6  Engine ID Data: IPv6 address
    IPv6 address
    Engine ID Data: IPv6 address

snmp.engineid.mac  Engine ID Data: MAC address
    6-byte Hardware (MAC) Address
    Engine ID Data: MAC address

snmp.engineid.text  Engine ID Data: Text
    String
    Engine ID Data: Text

snmp.engineid.time  Engine ID Data: Time
    Date/Time stamp
    Engine ID Data: Time

snmp.enterprise  enterprise
    snmp.EnterpriseOID

snmp.error_index  error-index
    Signed 32-bit integer
    snmp.INTEGER
```

```
snmp.error_status  error-status
    Signed 32-bit integer
    snmp.T_error_status

  Unsigned 16-bit integer
stun.type Message Type
  Unsigned 16-bit integer
```

**Sinec H1 Protocol (h1)**

h1.dbnr Memory block number  
Unsigned 8-bit integer

h1.dlen Length in words  
Signed 16-bit integer

h1.dwnr Address within memory block  
Unsigned 16-bit integer

h1.empty Empty field  
Unsigned 8-bit integer

h1.empty\_len Empty field length  
Unsigned 8-bit integer

h1.header H1-Header  
Unsigned 16-bit integer

h1.len Length indicator  
Unsigned 16-bit integer

h1.opcode Opcode  
Unsigned 8-bit integer

h1.opfield Operation identifier  
Unsigned 8-bit integer

h1.oplen Operation length  
Unsigned 8-bit integer

h1.org Memory type  
Unsigned 8-bit integer

h1.reqlen Request length  
Unsigned 8-bit integer

h1.request Request identifier  
Unsigned 8-bit integer

h1.reslen Response length  
Unsigned 8-bit integer

h1.response Response identifier  
Unsigned 8-bit integer

h1.resvalue Response value  
Unsigned 8-bit integer

**Sipfrag (sipfrag)**

sipfrag.line Line  
String  
Line

**Skinny Client Control Protocol (skinny)**

skinny.DSCPValue DSCPValue  
Unsigned 32-bit integer  
DSCPValue.

skinny.MPI MPI  
Unsigned 32-bit integer  
MPI.

```
skinny.RTPPayloadFormat RTPPayloadFormat
    Unsigned 32-bit integer
    RTPPayloadFormat.

skinny.activeConferenceOnRegistration ActiveConferenceOnRegistration
    Unsigned 32-bit integer
    ActiveConferenceOnRegistration.

skinny.activeForward Active Forward
    Unsigned 32-bit integer
    This is non zero to indicate that a forward is active on the line

skinny.activeStreamsOnRegistration ActiveStreamsOnRegistration
    Unsigned 32-bit integer
    ActiveStreamsOnRegistration.

skinny.addParticipantResults AddParticipantResults
    Unsigned 32-bit integer
    The add conference participant results

skinny.alarmParam1 AlarmParam1
    Unsigned 32-bit integer
    An as yet undecoded param1 value from the alarm message

skinny.alarmParam2 AlarmParam2
    IPv4 address
    This is the second alarm parameter i think it's an ip address

skinny.alarmSeverity AlarmSeverity
    Unsigned 32-bit integer
    The severity of the reported alarm.

skinny.annPlayMode annPlayMode
    Unsigned 32-bit integer
    AnnPlayMode

skinny.annPlayStatus AnnPlayStatus
    Unsigned 32-bit integer
    AnnPlayStatus

skinny.annexNandWFutureUse AnnexNandWFutureUse
    Unsigned 32-bit integer
    AnnexNandWFutureUse.

skinny.appConfID AppConfID
    Unsigned 8-bit integer
    App Conf ID Data.

skinny.appData AppData
    Unsigned 8-bit integer
    App data.

skinny.appID AppID
    Unsigned 32-bit integer
    AppID.

skinny.appInstanceID AppInstanceID
    Unsigned 32-bit integer
    appInstanceID.

skinny.applicationID ApplicationID
    Unsigned 32-bit integer
    Application ID.
```

skinny.audioCapCount AudioCapCount  
Unsigned 32-bit integer  
AudioCapCount.

skinny.auditParticipantResults AuditParticipantResults  
Unsigned 32-bit integer  
The audit participant results

skinny.bandwidth Bandwidth  
Unsigned 32-bit integer  
Bandwidth.

skinny.bitRate BitRate  
Unsigned 32-bit integer  
BitRate.

skinny.buttonCount ButtonCount  
Unsigned 32-bit integer  
Number of (VALID) button definitions in this message.

skinny.buttonDefinition ButtonDefinition  
Unsigned 8-bit integer  
The button type for this instance (ie line, speed dial, ....

skinny.buttonInstanceNumber InstanceNumber  
Unsigned 8-bit integer  
The button instance number for a button or the StationKeyPad value, repeats

skinny.buttonOffset ButtonOffset  
Unsigned 32-bit integer  
Offset is the number of the first button referenced by this message.

skinny.callIdentifier Call Identifier  
Unsigned 32-bit integer  
Call identifier for this call.

skinny.callSelectStat CallSelectStat  
Unsigned 32-bit integer  
CallSelectStat.

skinny.callState CallState  
Unsigned 32-bit integer  
The D channel call state of the call

skinny.callType Call Type  
Unsigned 32-bit integer  
What type of call, in/out/etc

skinny.calledParty CalledParty  
String  
The number called.

skinny.calledPartyName Called Party Name  
String  
The name of the party we are calling.

skinny.callingPartyName Calling Party Name  
String  
The passed name of the calling party.

skinny.capCount CapCount  
Unsigned 32-bit integer  
How many capabilities

```
skinny.clockConversionCode  ClockConversionCode
    Unsigned 32-bit integer
    ClockConversionCode.

skinny.clockDivisor  ClockDivisor
    Unsigned 32-bit integer
    Clock Divisor.

skinny.confServiceNum  ConfServiceNum
    Unsigned 32-bit integer
    ConfServiceNum.

skinny.conferenceID  Conference ID
    Unsigned 32-bit integer
    The conference ID

skinny.country  Country
    Unsigned 32-bit integer
    Country ID (Network locale).

skinny.createConfResults  CreateConfResults
    Unsigned 32-bit integer
    The create conference results

skinny.customPictureFormatCount  CustomPictureFormatCount
    Unsigned 32-bit integer
    CustomPictureFormatCount.

skinny.data  Data
    Unsigned 8-bit integer
    dataPlace holder for unknown data.

skinny.dataCapCount  DataCapCount
    Unsigned 32-bit integer
    DataCapCount.

skinny.data_length  Data Length
    Unsigned 32-bit integer
    Number of bytes in the data portion.

skinny.dateMilliseconds  Milliseconds
    Unsigned 32-bit integer
    Milliseconds

skinny.dateSeconds  Seconds
    Unsigned 32-bit integer
    Seconds

skinny.dateTemplate  DateTemplate
    String
    The display format for the date/time on the phone.

skinny.day  Day
    Unsigned 32-bit integer
    The day of the current month

skinny.dayOfWeek  DayOfWeek
    Unsigned 32-bit integer
    The day of the week

skinny.deleteConfResults  DeleteConfResults
    Unsigned 32-bit integer
    The delete conference results
```

```
skinny.detectInterval  HF Detect Interval
    Unsigned 32-bit integer
    The number of milliseconds that determines a hook flash has occurred

skinny.deviceName      DeviceName
    String
    The device name of the phone.

skinny.deviceResetType Reset Type
    Unsigned 32-bit integer
    How the devices it to be reset (reset/restart)

skinny.deviceTone      Tone
    Unsigned 32-bit integer
    Which tone to play

skinny.deviceType      DeviceType
    Unsigned 32-bit integer
    DeviceType of the station.

skinny.deviceUnregisterStatus  Unregister Status
    Unsigned 32-bit integer
    The status of the device unregister request (*CAN* be refused)

skinny.directoryNumber  Directory Number
    String
    The number we are reporting statistics for.

skinny.displayMessage   DisplayMessage
    String
    The message displayed on the phone.

skinny.displayPriority  DisplayPriority
    Unsigned 32-bit integer
    Display Priority.

skinny.echoCancelType  Echo Cancel Type
    Unsigned 32-bit integer
    Is echo cancelling enabled or not

skinny.endOfAnnAck     EndOfAnnAck
    Unsigned 32-bit integer
    EndOfAnnAck

skinny.featureID       FeatureID
    Unsigned 32-bit integer
    FeatureID.

skinny.featureIndex    FeatureIndex
    Unsigned 32-bit integer
    FeatureIndex.

skinny.featureStatus   FeatureStatus
    Unsigned 32-bit integer
    FeatureStatus.

skinny.featureTextLabel  FeatureTextLabel
    String
    The feature lable text that is displayed on the phone.

skinny.firstGOB        FirstGOB
    Unsigned 32-bit integer
    FirstGOB.
```

```
skinny.firstMB  FirstMB
    Unsigned 32-bit integer
    FirstMB.

skinny.format  Format
    Unsigned 32-bit integer
    Format.

skinny.forwardAllActive  Forward All
    Unsigned 32-bit integer
    Forward all calls

skinny.forwardBusyActive  Forward Busy
    Unsigned 32-bit integer
    Forward calls when busy

skinny.forwardNoAnswerActive  Forward NoAns
    Unsigned 32-bit integer
    Forward only when no answer

skinny.forwardNumber  Forward Number
    String
    The number to forward calls to.

skinny.fqdn  DisplayName
    String
    The full display name for this line.

skinny.g723BitRate  G723 BitRate
    Unsigned 32-bit integer
    The G723 bit rate for this stream/JUNK if not g723 stream

skinny.h263_capability_bitfield  H263_capability_bitfield
    Unsigned 32-bit integer
    H263_capability_bitfield.

skinny.headsetMode  Headset Mode
    Unsigned 32-bit integer
    Turns on and off the headset on the set

skinny.hearingConfPartyMask  HearingConfPartyMask
    Unsigned 32-bit integer
    Bit mask of conference parties to hear media received on this stream.  Bit0

skinny.hookFlashDetectMode  Hook Flash Mode
    Unsigned 32-bit integer
    Which method to use to detect that a hook flash has occurred

skinny.hour  Hour
    Unsigned 32-bit integer
    Hour of the day

skinny.ipAddress  IP Address
    IPv4 address
    An IP address

skinny.isConferenceCreator  IsConferenceCreator
    Unsigned 32-bit integer
    IsConferenceCreator.

skinny.jitter  Jitter
    Unsigned 32-bit integer
    Average jitter during the call.
```

skinny.keepAliveInterval KeepAliveInterval  
Unsigned 32-bit integer  
How often are keep alives exchanges between the client and the call manager.

skinny.lampMode LampMode  
Unsigned 32-bit integer  
The lamp mode

skinny.last Last  
Unsigned 32-bit integer  
Last.

skinny.latency Latency(ms)  
Unsigned 32-bit integer  
Average packet latency during the call.

skinny.layout Layout  
Unsigned 32-bit integer  
Layout

skinny.layoutCount LayoutCount  
Unsigned 32-bit integer  
LayoutCount.

skinny.levelPreferenceCount LevelPreferenceCount  
Unsigned 32-bit integer  
LevelPreferenceCount.

skinny.lineDirNumber Line Dir Number  
String  
The directory number for this line.

skinny.lineInstance Line Instance  
Unsigned 32-bit integer  
The display call plane associated with this call.

skinny.lineNumber LineNumber  
Unsigned 32-bit integer  
Line Number

skinny.locale Locale  
Unsigned 32-bit integer  
User locale ID.

skinny.longTermPictureIndex LongTermPictureIndex  
Unsigned 32-bit integer  
LongTermPictureIndex.

skinny.matrixConfPartyID MatrixConfPartyID  
Unsigned 32-bit integer  
existing conference parties.

skinny.maxBW MaxBW  
Unsigned 32-bit integer  
MaxBW.

skinny.maxBitRate MaxBitRate  
Unsigned 32-bit integer  
MaxBitRate.

skinny.maxConferences MaxConferences  
Unsigned 32-bit integer  
MaxConferences.

skinny.maxFramesPerPacket MaxFramesPerPacket  
Unsigned 16-bit integer  
Max frames per packet

skinny.maxStreams MaxStreams  
Unsigned 32-bit integer  
32 bit unsigned integer indicating the maximum number of simultaneous RTP du

skinny.maxStreamsPerConf MaxStreamsPerConf  
Unsigned 32-bit integer  
Maximum number of streams per conference.

skinny.mediaEnunciationType Enunciation Type  
Unsigned 32-bit integer  
No clue.

skinny.messageTimeoutValue Message Timeout  
Unsigned 32-bit integer  
The timeout in seconds for this message

skinny.messageid Message ID  
Unsigned 32-bit integer  
The function requested/done with this message.

skinny.microphoneMode Microphone Mode  
Unsigned 32-bit integer  
Turns on and off the microphone on the set

skinny.millisecondPacketSize MS/Packet  
Unsigned 32-bit integer  
The number of milliseconds of conversation in each packet

skinny.minBitRate MinBitRate  
Unsigned 32-bit integer  
MinBitRate.

skinny.minute Minute  
Unsigned 32-bit integer  
Minute

skinny.miscCommandType MiscCommandType  
Unsigned 32-bit integer  
MiscCommandType

skinny.modelNumber ModelNumber  
Unsigned 32-bit integer  
ModelNumber.

skinny.modifyConfResults ModifyConfResults  
Unsigned 32-bit integer  
The modify conference results

skinny.month Month  
Unsigned 32-bit integer  
The current month

skinny.multicastIpAddress Multicast Ip Address  
IPv4 address  
The multicast address for this conference

skinny.multicastPort Multicast Port  
Unsigned 32-bit integer  
The multicast port the to listens on.

skinny.notify Notify  
String  
The message notify text that is displayed on the phone.

skinny.numberLines Number of Lines  
Unsigned 32-bit integer  
How many lines this device has

skinny.numberOfActiveParticipants NumberOfActiveParticipants  
Unsigned 32-bit integer  
numberOfActiveParticipants.

skinny.numberOfEntries NumberOfEntries  
Unsigned 32-bit integer  
Number of entries in list.

skinny.numberOfGOBs NumberOfGOBs  
Unsigned 32-bit integer  
NumberOfGOBs.

skinny.numberOfInServiceStreams NumberOfInServiceStreams  
Unsigned 32-bit integer  
Number of in service streams.

skinny.numberOfMBS NumberOfMBS  
Unsigned 32-bit integer  
NumberOfMBS.

skinny.numberOfOutOfServiceStreams NumberOfOutOfServiceStreams  
Unsigned 32-bit integer  
Number of out of service streams.

skinny.numberOfReservedParticipants NumberOfReservedParticipants  
Unsigned 32-bit integer  
numberOfReservedParticipants.

skinny.numberSpeedDials Number of SpeedDials  
Unsigned 32-bit integer  
The number of speed dials this device has

skinny.octetsRecv Octets Received  
Unsigned 32-bit integer  
Octets received during the call.

skinny.octetsSent Octets Sent  
Unsigned 32-bit integer  
Octets sent during the call.

skinny.openReceiveChannelStatus OpenReceiveChannelStatus  
Unsigned 32-bit integer  
The status of the opened receive channel.

skinny.originalCalledParty Original Called Party  
String  
The number of the original calling party.

skinny.originalCalledPartyName Original Called Party Name  
String  
name of the original person who placed the call.

skinny.packetsLost Packets Lost  
Unsigned 32-bit integer  
Packets lost during the call.

skinny.packetsRecv Packets Received  
Unsigned 32-bit integer  
Packets received during the call.

skinny.packetsSent Packets Sent  
Unsigned 32-bit integer  
Packets Sent during the call.

skinny.participantEntry ParticipantEntry  
Unsigned 32-bit integer  
Participant Entry.

skinny.passThruData PassThruData  
Unsigned 8-bit integer  
Pass Through data.

skinny.passThruPartyID PassThruPartyID  
Unsigned 32-bit integer  
The pass thru party id

skinny.payloadCapability PayloadCapability  
Unsigned 32-bit integer  
The payload capability for this media capability structure.

skinny.payloadDtmf PayloadDtmf  
Unsigned 32-bit integer  
RTP payload type.

skinny.payloadType PayloadType  
Unsigned 32-bit integer  
PayloadType.

skinny.payload\_rfc\_number Payload\_rfc\_number  
Unsigned 32-bit integer  
Payload\_rfc\_number.

skinny.pictureFormatCount PictureFormatCount  
Unsigned 32-bit integer  
PictureFormatCount.

skinny.pictureHeight PictureHeight  
Unsigned 32-bit integer  
PictureHeight.

skinny.pictureNumber PictureNumber  
Unsigned 32-bit integer  
PictureNumber.

skinny.pictureWidth PictureWidth  
Unsigned 32-bit integer  
PictureWidth.

skinny.pixelAspectRatio PixelAspectRatio  
Unsigned 32-bit integer  
PixelAspectRatio.

skinny.portNumber Port Number  
Unsigned 32-bit integer  
A port number

skinny.precedenceValue Precedence  
Unsigned 32-bit integer  
Precedence value

skinny.priority Priority  
Unsigned 32-bit integer  
Priority.

skinny.protocolDependentData ProtocolDependentData  
Unsigned 32-bit integer  
ProtocolDependentData.

skinny.receptionStatus ReceptionStatus  
Unsigned 32-bit integer  
The current status of the multicast media.

skinny.recoveryReferencePictureCount RecoveryReferencePictureCount  
Unsigned 32-bit integer  
RecoveryReferencePictureCount.

skinny.remoteIpAddr Remote Ip Address  
IPv4 address  
The remote end ip address for this stream

skinny.remotePortNumber Remote Port  
Unsigned 32-bit integer  
The remote port number listening for this stream

skinny.reserved Reserved  
Unsigned 32-bit integer  
Reserved for future(?) use.

skinny.resourceTypes ResourceType  
Unsigned 32-bit integer  
Resource Type

skinny.ringType Ring Type  
Unsigned 32-bit integer  
What type of ring to play

skinny.routingID routingID  
Unsigned 32-bit integer  
routingID.

skinny.secondaryKeepAliveInterval SecondaryKeepAliveInterval  
Unsigned 32-bit integer  
How often are keep alives exchanges between the client and the secondary cal

skinny.sequenceFlag SequenceFlag  
Unsigned 32-bit integer  
Sequence Flag

skinny.serverIdentifier Server Identifier  
String  
Server Identifier.

skinny.serverIpAddress Server Ip Address  
IPv4 address  
The IP address for this server

skinny.serverListenPort Server Port  
Unsigned 32-bit integer  
The port the server listens on.

skinny.serverName Server Name  
String  
The server name for this device.

```
skinny.serviceNum ServiceNum
    Unsigned 32-bit integer
    ServiceNum.

skinny.serviceNumber ServiceNumber
    Unsigned 32-bit integer
    ServiceNumber.

skinny.serviceResourceCount ServiceResourceCount
    Unsigned 32-bit integer
    ServiceResourceCount.

skinny.serviceURL ServiceURL
    String
    ServiceURL.

skinny.serviceURLDisplayName ServiceURLDisplayName
    String
    ServiceURLDisplayName.

skinny.serviceURLIndex serviceURLIndex
    Unsigned 32-bit integer
    serviceURLIndex.

skinny.sessionType Session Type
    Unsigned 32-bit integer
    The type of this session.

skinny.silenceSuppression Silence Suppression
    Unsigned 32-bit integer
    Mode for silence suppression

skinny.softKeyCount SoftKeyCount
    Unsigned 32-bit integer
    The number of valid softkeys in this message.

skinny.softKeyEvent SoftKeyEvent
    Unsigned 32-bit integer
    Which softkey event is being reported.

skinny.softKeyInfoIndex SoftKeyInfoIndex
    Unsigned 16-bit integer
    Array of size 16 16-bit unsigned integers containing an index into the soft

skinny.softKeyLabel SoftKeyLabel
    String
    The text label for this soft key.

skinny.softKeyMap SoftKeyMap
    Unsigned 16-bit integer

skinny.softKeyMap.0 SoftKey0
    Boolean

skinny.softKeyMap.1 SoftKey1
    Boolean

skinny.softKeyMap.10 SoftKey10
    Boolean

skinny.softKeyMap.11 SoftKey11
    Boolean
```

```

skinny.softKeyMap.12  SoftKey12
    Boolean
skinny.softKeyMap.13  SoftKey13
    Boolean
skinny.softKeyMap.14  SoftKey14
    Boolean
skinny.softKeyMap.15  SoftKey15
    Boolean
skinny.softKeyMap.2   SoftKey2
    Boolean
skinny.softKeyMap.3   SoftKey3
    Boolean
skinny.softKeyMap.4   SoftKey4
    Boolean
skinny.softKeyMap.5   SoftKey5
    Boolean
skinny.softKeyMap.6   SoftKey6
    Boolean
skinny.softKeyMap.7   SoftKey7
    Boolean
skinny.softKeyMap.8   SoftKey8
    Boolean
skinny.softKeyMap.9   SoftKey9
    Boolean
skinny.softKeyOffset  SoftKeyOffset
    Unsigned 32-bit integer
    The offset for the first soft key in this message.
skinny.softKeySetCount SoftKeySetCount
    Unsigned 32-bit integer
    The number of valid softkey sets in this message.
skinny.softKeySetDescription SoftKeySet
    Unsigned 8-bit integer
    A text description of what this softkey when this softkey set is displayed
skinny.softKeySetOffset SoftKeySetOffset
    Unsigned 32-bit integer
    The offset for the first soft key set in this message.
skinny.softKeyTemplateIndex SoftKeyTemplateIndex
    Unsigned 8-bit integer
    Array of size 16 8-bit unsigned ints containing an index into the softKeyTem
skinny.speakerMode  Speaker
    Unsigned 32-bit integer
    This message sets the speaker mode on/off
skinny.speedDialDirNum SpeedDial Number
    String
    the number to dial for this speed dial.

```

skinny.speedDialDisplay SpeedDial Display  
String  
The text to display for this speed dial.

skinny.speedDialNumber SpeedDialNumber  
Unsigned 32-bit integer  
Which speed dial number

skinny.stationInstance StationInstance  
Unsigned 32-bit integer  
The stations instance.

skinny.stationIpPort StationIpPort  
Unsigned 16-bit integer  
The station IP port

skinny.stationKeypadButton KeypadButton  
Unsigned 32-bit integer  
The button pressed on the phone.

skinny.stationUserId StationUserId  
Unsigned 32-bit integer  
The station user id.

skinny.statsProcessingType StatsProcessingType  
Unsigned 32-bit integer  
What do do after you send the stats.

skinny.stillImageTransmission StillImageTransmission  
Unsigned 32-bit integer  
StillImageTransmission.

skinny.stimulus Stimulus  
Unsigned 32-bit integer  
Reason for the device stimulus message.

skinny.stimulusInstance StimulusInstance  
Unsigned 32-bit integer  
The instance of the stimulus

skinny.temporalSpatialTradeOff TemporalSpatialTradeOff  
Unsigned 32-bit integer  
TemporalSpatialTradeOff.

skinny.temporalSpatialTradeOffCapability TemporalSpatialTradeOffCapability  
Unsigned 32-bit integer  
TemporalSpatialTradeOffCapability.

skinny.timeStamp Timestamp  
Unsigned 32-bit integer  
Time stamp for the call reference

skinny.tokenRejWaitTime Retry Wait Time  
Unsigned 32-bit integer  
The time to wait before retrying this token request.

skinny.totalButtonCount TotalButtonCount  
Unsigned 32-bit integer  
The total number of buttons defined for this phone.

skinny.totalSoftKeyCount TotalSoftKeyCount  
Unsigned 32-bit integer  
The total number of softkeys for this device.

skinny.totalSoftKeySetCount TotalSoftKeySetCount  
Unsigned 32-bit integer  
The total number of softkey sets for this device.

skinny.transactionID TransactionID  
Unsigned 32-bit integer  
Transaction ID.

skinny.transmitOrReceive TransmitOrReceive  
Unsigned 32-bit integer  
TransmitOrReceive

skinny.transmitPreference TransmitPreference  
Unsigned 32-bit integer  
TransmitPreference.

skinny.unknown Data  
Unsigned 32-bit integer  
Place holder for unknown data.

skinny.userName Username  
String  
Username for this device.

skinny.version Version  
String  
Version.

skinny.videoCapCount VideoCapCount  
Unsigned 32-bit integer  
VideoCapCount.

skinny.year Year  
Unsigned 32-bit integer  
The current year

### **SLIMP3 Communication Protocol (slimp3)**

slimp3.control Control Packet  
Boolean  
SLIMP3 control

slimp3.data Data  
Boolean  
SLIMP3 Data

slimp3.data\_ack Data Ack  
Boolean  
SLIMP3 Data Ack

slimp3.data\_req Data Request  
Boolean  
SLIMP3 Data Request

slimp3.discovery\_req Discovery Request  
Boolean  
SLIMP3 Discovery Request

slimp3.discovery\_response Discovery Response  
Boolean  
SLIMP3 Discovery Response

```

slimp3.display  Display
    Boolean
    SLIMP3 display
slimp3.hello  Hello
    Boolean
    SLIMP3 hello
slimp3.i2c  I2C
    Boolean
    SLIMP3 I2C
slimp3.ir  Infrared
    Unsigned 32-bit integer
    SLIMP3 Infrared command
slimp3.opcode  Opcode
    Unsigned 8-bit integer
    SLIMP3 message type

```

### Slow Protocols (slow)

```

slow.lacp.actorInfo  Actor Information
    Unsigned 8-bit integer
    TLV type = Actor
slow.lacp.actorInfoLen  Actor Information Length
    Unsigned 8-bit integer
    The length of the Actor TLV
slow.lacp.actorKey  Actor Key
    Unsigned 16-bit integer
    The operational Key value assigned to the port by the Actor
slow.lacp.actorPort  Actor Port
    Unsigned 16-bit integer
    The port number assigned to the port by the Actor (via Management or Admin)
slow.lacp.actorPortPriority  Actor Port Priority
    Unsigned 16-bit integer
    The priority assigned to the port by the Actor (via Management or Admin)
slow.lacp.actorState  Actor State
    Unsigned 8-bit integer
    The Actor's state variables for the port, encoded as bits within a single octet
slow.lacp.actorState.activity  LACP Activity
    Boolean
    Activity control value for this link. Active = 1, Passive = 0
slow.lacp.actorState.aggregation  Aggregation
    Boolean
    Aggregatable = 1, Individual = 0
slow.lacp.actorState.collecting  Collecting
    Boolean
    Collection of incoming frames is: Enabled = 1, Disabled = 0
slow.lacp.actorState.defaulted  Defaulted
    Boolean
    1 = Actor Rx machine is using DEFAULT Partner info, 0 = using info in Rx'd L

```

```
slow.lacp.actorState.distributing  Distributing
    Boolean
    Distribution of outgoing frames is: Enabled = 1, Disabled = 0
slow.lacp.actorState.expired      Expired
    Boolean
    1 = Actor Rx machine is EXPIRED, 0 = is NOT EXPIRED
slow.lacp.actorState.synchronization  Synchronization
    Boolean
    In Sync = 1, Out of Sync = 0
slow.lacp.actorState.timeout      LACP Timeout
    Boolean
    Timeout control value for this link. Short Timeout = 1, Long Timeout = 0
slow.lacp.actorSysPriority        Actor System Priority
    Unsigned 16-bit integer
    The priority assigned to this System by management or admin
slow.lacp.actorSystem            Actor System
    6-byte Hardware (MAC) Address
    The Actor's System ID encoded as a MAC address
slow.lacp.coll_reserved          Reserved
    Byte array
slow.lacp.collectorInfo          Collector Information
    Unsigned 8-bit integer
    TLV type = Collector
slow.lacp.collectorInfoLen       Collector Information Length
    Unsigned 8-bit integer
    The length of the Collector TLV
slow.lacp.collectorMaxDelay       Collector Max Delay
    Unsigned 16-bit integer
    The max delay of the station tx'ing the LACPDU (in tens of usecs)
slow.lacp.partnerInfo            Partner Information
    Unsigned 8-bit integer
    TLV type = Partner
slow.lacp.partnerInfoLen         Partner Information Length
    Unsigned 8-bit integer
    The length of the Partner TLV
slow.lacp.partnerKey             Partner Key
    Unsigned 16-bit integer
    The operational Key value assigned to the port associated with this link by
slow.lacp.partnerPort            Partner Port
    Unsigned 16-bit integer
    The port number associated with this link assigned to the port by the Partne
slow.lacp.partnerPortPriority     Partner Port Priority
    Unsigned 16-bit integer
    The priority assigned to the port by the Partner (via Management or Admin)
slow.lacp.partnerState           Partner State
    Unsigned 8-bit integer
    The Partner's state variables for the port, encoded as bits within a single
```

```
slow.lacp.partnerState.activity  LACP Activity
    Boolean
    Activity control value for this link. Active = 1, Passive = 0
slow.lacp.partnerState.aggregation  Aggregation
    Boolean
    Aggregatable = 1, Individual = 0
slow.lacp.partnerState.collecting  Collecting
    Boolean
    Collection of incoming frames is: Enabled = 1, Disabled = 0
slow.lacp.partnerState.defaulted  Defaulted
    Boolean
    1 = Actor Rx machine is using DEFAULT Partner info, 0 = using info in Rx'd L
slow.lacp.partnerState.distributing  Distributing
    Boolean
    Distribution of outgoing frames is: Enabled = 1, Disabled = 0
slow.lacp.partnerState.expired  Expired
    Boolean
    1 = Actor Rx machine is EXPIRED, 0 = is NOT EXPIRED
slow.lacp.partnerState.synchronization  Synchronization
    Boolean
    In Sync = 1, Out of Sync = 0
slow.lacp.partnerState.timeout  LACP Timeout
    Boolean
    Timeout control value for this link. Short Timeout = 1, Long Timeout = 0
slow.lacp.partnerSysPriority  Partner System Priority
    Unsigned 16-bit integer
    The priority assigned to the Partner System by management or admin
slow.lacp.partnerSystem  Partner System
    6-byte Hardware (MAC) Address
    The Partner's System ID encoded as a MAC address
slow.lacp.reserved  Reserved
    Byte array
slow.lacp.termInfo  Terminator Information
    Unsigned 8-bit integer
    TLV type = Terminator
slow.lacp.termLen  Terminator Length
    Unsigned 8-bit integer
    The length of the Terminator TLV
slow.lacp.term_reserved  Reserved
    Byte array
slow.lacp.version  LACP Version Number
    Unsigned 8-bit integer
    Identifies the LACP version
slow.marker.requesterPort  Requester Port
    Unsigned 16-bit integer
    The Requester Port
```

slow.marker.requesterSystem Requester System  
6-byte Hardware (MAC) Address  
The Requester System ID encoded as a MAC address

slow.marker.requesterTransId Requester Transaction ID  
Unsigned 32-bit integer  
The Requester Transaction ID

slow.marker.tlvLen TLV Length  
Unsigned 8-bit integer  
The length of the Actor TLV

slow.marker.tlvType TLV Type  
Unsigned 8-bit integer  
Marker TLV type

slow.marker.version Version Number  
Unsigned 8-bit integer  
Identifies the Marker version

slow.oam.code OAMPDU code  
Unsigned 8-bit integer  
Identifies the TLVs code

slow.oam.event.efeErrors Errored Frames  
Unsigned 32-bit integer  
Number of symbols in error

slow.oam.event.efeThreshold Errored Frame Threshold  
Unsigned 32-bit integer  
Number of frames required to generate the Event

slow.oam.event.efeTotalErrors Error Running Total  
Unsigned 64-bit integer  
Number of frames in error since reset of the sublayer

slow.oam.event.efeTotalEvents Event Running Total  
Unsigned 32-bit integer  
Total Event generated since reset of the sublayer

slow.oam.event.efeWindow Errored Frame Window  
Unsigned 16-bit integer  
Number of symbols in the period

slow.oam.event.efpeThreshold Errored Frame Threshold  
Unsigned 32-bit integer  
Number of frames required to generate the Event

slow.oam.event.efpeTotalErrors Error Running Total  
Unsigned 64-bit integer  
Number of frames in error since reset of the sublayer

slow.oam.event.efpeTotalEvents Event Running Total  
Unsigned 32-bit integer  
Total Event generated since reset of the sublayer

slow.oam.event.efpeWindow Errored Frame Window  
Unsigned 32-bit integer  
Number of frame in error during the period

slow.oam.event.efsseThreshold Errored Frame Threshold  
Unsigned 16-bit integer  
Number of frames required to generate the Event

slow.oam.event.efsseTotalErrors Error Running Total  
Unsigned 32-bit integer  
Number of frames in error since reset of the sublayer

slow.oam.event.efsseTotalEvents Event Running Total  
Unsigned 32-bit integer  
Total Event generated since reset of the sublayer

slow.oam.event.efsseWindow Errored Frame Window  
Unsigned 16-bit integer  
Number of frame in error during the period

slow.oam.event.espeErrors Errored Symbols  
Unsigned 64-bit integer  
Number of symbols in error

slow.oam.event.espeThreshold Errored Symbol Threshold  
Unsigned 64-bit integer  
Number of symbols required to generate the Event

slow.oam.event.espeTotalErrors Error Running Total  
Unsigned 64-bit integer  
Number of symbols in error since reset of the sublayer

slow.oam.event.espeTotalEvents Event Running Total  
Unsigned 32-bit integer  
Total Event generated since reset of the sublayer

slow.oam.event.espeWindow Errored Symbol Window  
Unsigned 64-bit integer  
Number of symbols in the period

slow.oam.event.length Event Length  
Unsigned 8-bit integer  
This field indicates the length in octets of the TLV-tuple

slow.oam.event.sequence Sequence Number  
Unsigned 16-bit integer  
Identifies the Event Notification TLVs

slow.oam.event.timestamp Event Timestamp (100ms)  
Unsigned 16-bit integer  
Event Time Stamp in term of 100 ms intervals

slow.oam.event.type Event Type  
Unsigned 8-bit integer  
Identifies the TLV type

slow.oam.flags Flags  
Unsigned 16-bit integer  
The Flags Field

slow.oam.flags.criticalEvent Critical Event  
Boolean  
A critical event has occurred. True = 1, False = 0

slow.oam.flags.dyingGasp Dying Gasp  
Boolean  
An unrecoverable local failure occurred. True = 1, False = 0

slow.oam.flags.linkFault Link Fault  
Boolean  
The PHY detected a fault in the receive direction. True = 1, False = 0

```
slow.oam.flags.localEvaluating  Local Evaluating
    Boolean
    Local DTE Discovery process in progress. True = 1, False = 0
slow.oam.flags.localStable      Local Stable
    Boolean
    Local DTE is Stable. True = 1, False = 0
slow.oam.flags.remoteEvaluating Remote Evaluating
    Boolean
    Remote DTE Discovery process in progress. True = 1, False = 0
slow.oam.flags.remoteStable     Remote Stable
    Boolean
    Remote DTE is Stable. True = 1, False = 0
slow.oam.info.length            TLV Length
    Unsigned 8-bit integer
    Identifies the TLVs type
slow.oam.info.oamConfig         OAM Configuration
    Unsigned 8-bit integer
    OAM Configuration
slow.oam.info.oamConfig.mode     OAM Mode
    Boolean
slow.oam.info.oampduConfig       Max OAMPDU Size
    Unsigned 16-bit integer
    OAMPDU Configuration
slow.oam.info.oui               Organizationally Unique Identifier
    Byte array
slow.oam.info.revision          TLV Revision
    Unsigned 16-bit integer
    Identifies the TLVs revision
slow.oam.info.state             OAM DTE States
    Unsigned 8-bit integer
    OAM DTE State of the Mux and the Parser
slow.oam.info.state.muxiplexer  Muxiplexer Action
    Boolean
    Muxiplexer Action
slow.oam.info.state.parser       Parser Action
    Unsigned 8-bit integer
    Parser Action
slow.oam.info.type              Type
    Unsigned 8-bit integer
    Identifies the TLV type
slow.oam.info.vendor            Vendor Specific Information
    Byte array
slow.oam.info.version           TLV Version
    Unsigned 8-bit integer
    Identifies the TLVs version
```

slow.oam.lpbk.commands Commands  
Unsigned 8-bit integer  
The List of Loopback Commands

slow.oam.lpbk.commands.disable Disable Remote Loopback  
Boolean  
Disable Remote Loopback Command

slow.oam.lpbk.commands.enable Enable Remote Loopback  
Boolean  
Enable Remote Loopback Command

slow.oam.variable.attribute Leaf  
Unsigned 16-bit integer  
Attribute, derived from the CMIP protocol in Annex 30A

slow.oam.variable.binding Leaf  
Unsigned 16-bit integer  
Binding, derived from the CMIP protocol in Annex 30A

slow.oam.variable.branch Branch  
Unsigned 8-bit integer  
Variable Branch, derived from the CMIP protocol in Annex 30A

slow.oam.variable.indication Variable indication  
Unsigned 8-bit integer  
Variable indication

slow.oam.variable.object Leaf  
Unsigned 16-bit integer  
Object, derived from the CMIP protocol in Annex 30A

slow.oam.variable.package Leaf  
Unsigned 16-bit integer  
Package, derived from the CMIP protocol in Annex 30A

slow.oam.variable.value Variable Value  
Byte array  
Value

slow.oam.variable.width Variable Width  
Unsigned 8-bit integer  
Width

slow.subtype Slow Protocols subtype  
Unsigned 8-bit integer  
Identifies the LACP version

#### **Societe Internationale de Telecommunications Aeronautiques (sita)**

sita.errors.abort Abort  
Boolean  
TRUE if Abort Received

sita.errors.break Break  
Boolean  
TRUE if Break Received

sita.errors.collission Collision  
Boolean  
TRUE if Collision

```
sita.errors.crc    CRC
  Boolean
  TRUE if CRC Error

sita.errors.framing Framing
  Boolean
  TRUE if Framing Error

sita.errors.length Length
  Boolean
  TRUE if Length Violation

sita.errors.longframe Long Frame
  Boolean
  TRUE if Long Frame Received

sita.errors.lostcd Carrier
  Boolean
  TRUE if Carrier Lost

sita.errors.lostcts Clear To Send
  Boolean
  TRUE if Clear To Send Lost

sita.errors.nonaligned NonAligned
  Boolean
  TRUE if NonAligned Frame

sita.errors.overrun Overrun
  Boolean
  TRUE if Overrun Error

sita.errors.parity Parity
  Boolean
  TRUE if Parity Error

sita.errors.protocol Protocol
  Unsigned 8-bit integer
  Protocol value

sita.errors.rtxlimit Retx Limit
  Boolean
  TRUE if Retransmit Limit reached

sita.errors.rxdpll DPLL
  Boolean
  TRUE if DPLL Error

sita.errors.shortframe Short Frame
  Boolean
  TRUE if Short Frame

sita.errors.uarterror UART
  Boolean
  TRUE if UART Error

sita.errors.underrun Underrun
  Boolean
  TRUE if Tx Underrun

sita.flags.droppedframe No Buffers
  Boolean
  TRUE if Buffer Failure
```

```
sita.flags.flags  Direction
  Boolean
  TRUE 'from Remote', FALSE 'from Local'
sita.signals.cts  CTS
  Boolean
  TRUE if Clear To Send
sita.signals.dcd  DCD
  Boolean
  TRUE if Data Carrier Detect
sita.signals.dsr  DSR
  Boolean
  TRUE if Data Set Ready
sita.signals.dtr  DTR
  Boolean
  TRUE if Data Terminal Ready
sita.signals.rts  RTS
  Boolean
  TRUE if Request To Send
```

**Socks Protocol (socks)**

```
socks.command  Command
  Unsigned 8-bit integer
socks.dst  Remote Address
  IPv4 address
socks.dstV6  Remote Address(ipv6)
  IPv6 address
socks.dstport  Remote Port
  Unsigned 16-bit integer
socks.results  Results(V5)
  Unsigned 8-bit integer
socks.results_v4  Results(V4)
  Unsigned 8-bit integer
socks.results_v5  Results(V5)
  Unsigned 8-bit integer
socks.username  User Name
  String
socks.v4a_dns_name  SOCKS v4a Remote Domain Name
  String
socks.version  Version
  Unsigned 8-bit integer
```

**SoulSeek Protocol (slsk)**

```
slsk.average.speed  Average Speed
  Unsigned 32-bit integer
  Average Speed
```

```
slsk.byte Byte
    Unsigned 8-bit integer
    Byte

slsk.chat.message Chat Message
    String
    Chat Message

slsk.chat.message.id Chat Message ID
    Unsigned 32-bit integer
    Chat Message ID

slsk.checksum Checksum
    Unsigned 32-bit integer
    Checksum

slsk.code Code
    Unsigned 32-bit integer
    Code

slsk.compr.packet [zlib compressed packet]
    No value
    zlib compressed packet

slsk.connection.type Connection Type
    String
    Connection Type

slsk.day.count Number of Days
    Unsigned 32-bit integer
    Number of Days

slsk.directories Directories
    Unsigned 32-bit integer
    Directories

slsk.directory Directory
    String
    Directory

slsk.download.number Download Number
    Unsigned 32-bit integer
    Download Number

slsk.file.count File Count
    Unsigned 32-bit integer
    File Count

slsk.filename Filename
    String
    Filename

slsk.files Files
    Unsigned 32-bit integer
    Files

slsk.folder.count Folder Count
    Unsigned 32-bit integer
    Folder Count

slsk.integer Integer
    Unsigned 32-bit integer
    Integer
```

```
slsk.ip.address  IP Address
  IPv4 address
  IP Address

slsk.login.message  Login Message
  String
  Login Message

slsk.login.successful  Login successful
  Unsigned 8-bit integer
  Login Successful

slsk.message.code  Message Code
  Unsigned 32-bit integer
  Message Code

slsk.message.length  Message Length
  Unsigned 32-bit integer
  Message Length

slsk.nodes.in.cache.before.disconnect  Nodes In Cache Before Disconnect
  Unsigned 32-bit integer
  Nodes In Cache Before Disconnect

slsk.parent.min.speed  Parent Min Speed
  Unsigned 32-bit integer
  Parent Min Speed

slsk.parent.speed.connection.ratio  Parent Speed Connection Ratio
  Unsigned 32-bit integer
  Parent Speed Connection Ratio

slsk.password  Password
  String
  Password

slsk.port.number  Port Number
  Unsigned 32-bit integer
  Port Number

slsk.queue.place  Place in Queue
  Unsigned 32-bit integer
  Place in Queue

slsk.ranking  Ranking
  Unsigned 32-bit integer
  Ranking

slsk.recommendation  Recommendation
  String
  Recommendation

slsk.room  Room
  String
  Room

slsk.room.count  Number of Rooms
  Unsigned 32-bit integer
  Number of Rooms

slsk.room.users  Users in Room
  Unsigned 32-bit integer
  Number of Users in Room
```

```
slsk.search.text  Search Text
  String
  Search Text

slsk.seconds.before.ping.children  Seconds Before Ping Children
  Unsigned 32-bit integer
  Seconds Before Ping Children

slsk.seconds.parent.inactivity.before.disconnect  Seconds Parent Inactivity Before Disconnect
  Unsigned 32-bit integer
  Seconds Parent Inactivity Before Disconnect

slsk.seconds.server.inactivity.before.disconnect  Seconds Server Inactivity Before Disconnect
  Unsigned 32-bit integer
  Seconds Server Inactivity Before Disconnect

slsk.server.ip  Client IP
  IPv4 address
  Client IP Address

slsk.size  Size
  Unsigned 32-bit integer
  File Size

slsk.slots.full  Slots full
  Unsigned 32-bit integer
  Upload Slots Full

slsk.status.code  Status Code
  Unsigned 32-bit integer
  Status Code

slsk.string  String
  String
  String

slsk.string.length  String Length
  Unsigned 32-bit integer
  String Length

slsk.timestamp  Timestamp
  Unsigned 32-bit integer
  Timestamp

slsk.token  Token
  Unsigned 32-bit integer
  Token

slsk.transfer.direction  Transfer Direction
  Unsigned 32-bit integer
  Transfer Direction

slsk.uploads.available  Upload Slots available
  Unsigned 8-bit integer
  Upload Slots available

slsk.uploads.queued  Queued uploads
  Unsigned 32-bit integer
  Queued uploads

slsk.uploads.total  Total uploads allowed
  Unsigned 32-bit integer
  Total uploads allowed
```

```
slsk.uploads.user  User uploads
  Unsigned 32-bit integer
  User uploads

slsk.user.allowed  Download allowed
  Unsigned 8-bit integer
  allowed

slsk.user.count    Number of Users
  Unsigned 32-bit integer
  Number of Users

slsk.user.description  User Description
  String
  User Description

slsk.user.exists   user exists
  Unsigned 8-bit integer
  User exists

slsk.user.picture  Picture
  String
  User Picture

slsk.user.picture.exists  Picture exists
  Unsigned 8-bit integer
  User has a picture

slsk.username      Username
  String
  Username

slsk.version        Version
  Unsigned 32-bit integer
  Version
```

### **Spanning Tree Protocol (stp)**

```
mstp.cist_bridge.hw  CIST Bridge Identifier
  6-byte Hardware (MAC) Address

mstp.cist_internal_root_path_cost  CIST Internal Root Path Cost
  Unsigned 32-bit integer

mstp.cist_remaining_hops  CIST Remaining hops
  Unsigned 8-bit integer

mstp.config_digest  MST Config digest
  Byte array

mstp.config_format_selector  MST Config ID format selector
  Unsigned 8-bit integer

mstp.config_name  MST Config name
  String

mstp.config_revision_level  MST Config revision
  Unsigned 16-bit integer

mstp.msti_bridge_priority  Bridge Identifier Priority
  Unsigned 8-bit integer

mstp.msti_flags  MSTI flags
  Unsigned 8-bit integer
```

```
mstp.msti.port  Port identifier
    Unsigned 16-bit integer
mstp.msti.port_priority  Port identifier priority
    Unsigned 8-bit integer
mstp.msti.remaining_hops  Remaining hops
    Unsigned 8-bit integer
mstp.msti.root.hw  Regional Root
    6-byte Hardware (MAC) Address
mstp.msti.root_cost  Internal root path cost
    Unsigned 32-bit integer
mstp.version_3_length  Version 3 Length
    Unsigned 16-bit integer
stp.bridge.hw  Bridge Identifier
    6-byte Hardware (MAC) Address
stp.flags  BPDU flags
    Unsigned 8-bit integer
stp.flags.agreement  Agreement
    Boolean
stp.flags.forwarding  Forwarding
    Boolean
stp.flags.learning  Learning
    Boolean
stp.flags.port_role  Port Role
    Unsigned 8-bit integer
stp.flags.proposal  Proposal
    Boolean
stp.flags.tc  Topology Change
    Boolean
stp.flags.tcack  Topology Change Acknowledgment
    Boolean
stp.forward  Forward Delay
    Double-precision floating point
stp.hello  Hello Time
    Double-precision floating point
stp.max_age  Max Age
    Double-precision floating point
stp.msg_age  Message Age
    Double-precision floating point
stp.port  Port identifier
    Unsigned 16-bit integer
stp.protocol  Protocol Identifier
    Unsigned 16-bit integer
stp.root.cost  Root Path Cost
    Unsigned 32-bit integer
```

```
stp.root.hw    Root Identifier
               6-byte Hardware (MAC) Address

stp.type       BPDU Type
               Unsigned 8-bit integer

stp.version    Protocol Version Identifier
               Unsigned 8-bit integer

stp.version_1_length  Version 1 Length
               Unsigned 8-bit integer
```

**StarTeam (starteam)**

```
starteam.data  Data
               String
               Data

starteam.id.client  Client ID
                  String
                  ID client ID

starteam.id.command  Command ID
                    Unsigned 32-bit integer
                    ID command ID

starteam.id.commandtime  Command time
                        Unsigned 32-bit integer
                        ID command time

starteam.id.commanduserid  Command user ID
                           Unsigned 32-bit integer
                           ID command user ID

starteam.id.component  Component ID
                      Unsigned 32-bit integer
                      ID component ID

starteam.id.connect  Connect ID
                    Unsigned 32-bit integer
                    ID connect ID

starteam.id.level  Revision level
                  Unsigned 16-bit integer
                  ID revision level

starteam.mdh.ctimestamp  Client timestamp
                        Unsigned 32-bit integer
                        MDH client timestamp

starteam.mdh.flags  Flags
                   Unsigned 32-bit integer
                   MDH flags

starteam.mdh.keyid  Key ID
                   Unsigned 32-bit integer
                   MDH key ID

starteam.mdh.reserved  Reserved
                      Unsigned 32-bit integer
                      MDH reserved
```

```
starteam.mdh.stag  Session tag
                   Unsigned 32-bit integer
                   MDH session tag

starteam.ph.dsize  Data size
                   Unsigned 32-bit integer
                   PH data size

starteam.ph.flags  Flags
                   Unsigned 32-bit integer
                   PH flags

starteam.ph.psize  Packet size
                   Unsigned 32-bit integer
                   PH packet size

starteam.ph.signature  Signature
                       String
                       PH signature
```

### **Stream Control Transmission Protocol (sctp)**

```
sctp.abort_t_bit  T-Bit
                  Boolean

sctp.ack  Acknowledges TSN
          Unsigned 32-bit integer

sctp.ack_frame  Chunk acknowledged in frame
                Frame number

sctp.acked  This chunk is acked in frame
            Frame number

sctp.adapation_layer_indication  Indication
                                  Unsigned 32-bit integer

sctp.asconf_ack_serial_number  Serial number
                                Unsigned 32-bit integer

sctp.asconf_serial_number  Serial number
                            Unsigned 32-bit integer

sctp.cause_code  Cause code
                 Unsigned 16-bit integer

sctp.cause_information  Cause information
                        Byte array

sctp.cause_length  Cause length
                   Unsigned 16-bit integer

sctp.cause_measure_of_staleness  Measure of staleness in usec
                                  Unsigned 32-bit integer

sctp.cause_missing_parameter_type  Missing parameter type
                                    Unsigned 16-bit integer

sctp.cause_nr_of_missing_parameters  Number of missing parameters
                                      Unsigned 32-bit integer

sctp.cause_padding  Cause padding
                    Byte array
```

```
sctp.cause_reserved  Reserved
    Unsigned 16-bit integer
sctp.cause_stream_identifier  Stream identifier
    Unsigned 16-bit integer
sctp.cause_tsn  TSN
    Unsigned 32-bit integer
sctp.checksum  Checksum
    Unsigned 32-bit integer
sctp.checksum_bad  Bad checksum
    Boolean
sctp.chunk_bit_1  Bit
    Boolean
sctp.chunk_bit_2  Bit
    Boolean
sctp.chunk_flags  Chunk flags
    Unsigned 8-bit integer
sctp.chunk_length  Chunk length
    Unsigned 16-bit integer
sctp.chunk_padding  Chunk padding
    Byte array
sctp.chunk_type  Chunk type
    Unsigned 8-bit integer
sctp.chunk_type_to_auth  Chunk type
    Unsigned 8-bit integer
sctp.chunk_value  Chunk value
    Byte array
sctp.cookie  Cookie
    Byte array
sctp.correlation_id  Correlation_id
    Unsigned 32-bit integer
sctp.cumulative_tsn_ack  Cumulative TSN Ack
    Unsigned 32-bit integer
sctp.cwr_lowest_tsn  Lowest TSN
    Unsigned 32-bit integer
sctp.data_b_bit  B-Bit
    Boolean
sctp.data_e_bit  E-Bit
    Boolean
sctp.data_payload_proto_id  Payload protocol identifier
    Unsigned 32-bit integer
sctp.data_sid  Stream Identifier
    Unsigned 16-bit integer
sctp.data_ssn  Stream sequence number
    Unsigned 16-bit integer
```

```
sctp.data_tsn    TSN
                 Unsigned 32-bit integer
sctp.data_u_bit  U-Bit
                 Boolean
sctp.dstport     Destination port
                 Unsigned 16-bit integer
sctp.duplicate   Fragment already seen in frame
                 Frame number
sctp.ecne_lowest_tsn  Lowest TSN
                 Unsigned 32-bit integer
sctp.forward_tsn_sid  Stream identifier
                 Unsigned 16-bit integer
sctp.forward_tsn_ssn  Stream sequence number
                 Unsigned 16-bit integer
sctp.forward_tsn_tsn  New cumulative TSN
                 Unsigned 32-bit integer
sctp.fragment    SCTP Fragment
                 Frame number
sctp.fragments   Reassembled SCTP Fragments
                 No value
sctp.hmac        HMAC
                 Byte array
sctp.hmac_id     HMAC identifier
                 Unsigned 16-bit integer
sctp.init_credit  Advertised receiver window credit (a_rwnd)
                 Unsigned 32-bit integer
sctp.init_initial_tsn  Initial TSN
                 Unsigned 32-bit integer
sctp.init_initiate_tag  Initiate tag
                 Unsigned 32-bit integer
sctp.init_nr_in_streams  Number of inbound streams
                 Unsigned 16-bit integer
sctp.init_nr_out_streams  Number of outbound streams
                 Unsigned 16-bit integer
sctp.initack_credit  Advertised receiver window credit (a_rwnd)
                 Unsigned 32-bit integer
sctp.initack_initial_tsn  Initial TSN
                 Unsigned 32-bit integer
sctp.initack_initiate_tag  Initiate tag
                 Unsigned 32-bit integer
sctp.initack_nr_in_streams  Number of inbound streams
                 Unsigned 16-bit integer
sctp.initack_nr_out_streams  Number of outbound streams
                 Unsigned 16-bit integer
```

```
sctp.initiate_tag  Initiate tag
    Unsigned 32-bit integer
sctp.parameter_bit_1  Bit
    Boolean
sctp.parameter_bit_2  Bit
    Boolean
sctp.parameter_cookie_preservative_incr  Suggested Cookie life-span increment (m
    Unsigned 32-bit integer
sctp.parameter_heartbeat_information  Heartbeat information
    Byte array
sctp.parameter_hostname  Hostname
    String
sctp.parameter_ipv4_address  IP Version 4 address
    IPv4 address
sctp.parameter_ipv6_address  IP Version 6 address
    IPv6 address
sctp.parameter_length  Parameter length
    Unsigned 16-bit integer
sctp.parameter_padding  Parameter padding
    Byte array
sctp.parameter_receivers_next_tsn  Receivers next TSN
    Unsigned 32-bit integer
sctp.parameter_senders_last_assigned_tsn  Senders last assigned TSN
    Unsigned 32-bit integer
sctp.parameter_senders_next_tsn  Senders next TSN
    Unsigned 32-bit integer
sctp.parameter_state_cookie  State cookie
    Byte array
sctp.parameter_stream_reset_request_sequence_number  Stream reset request sequen
    Unsigned 32-bit integer
sctp.parameter_stream_reset_response_result  Result
    Unsigned 32-bit integer
sctp.parameter_stream_reset_response_sequence_number  Stream reset response sequ
    Unsigned 32-bit integer
sctp.parameter_stream_reset_sid  Stream Identifier
    Unsigned 16-bit integer
sctp.parameter_supported_address_type  Supported address type
    Unsigned 16-bit integer
sctp.parameter_type  Parameter type
    Unsigned 16-bit integer
sctp.parameter_value  Parameter value
    Byte array
sctp.pckdrop_b_bit  B-Bit
    Boolean
```

```
sctp.pckdrop_m_bit  M-Bit
  Boolean
sctp.pckdrop_t_bit  T-Bit
  Boolean
sctp.pktdrop_bandwidth  Bandwidth
  Unsigned 32-bit integer
sctp.pktdrop_datafield  Data field
  Byte array
sctp.pktdrop_queuesize  Queuesize
  Unsigned 32-bit integer
sctp.pktdrop_reserved  Reserved
  Unsigned 16-bit integer
sctp.pktdrop_truncated_length  Truncated length
  Unsigned 16-bit integer
sctp.port  Port
  Unsigned 16-bit integer
sctp.random_number  Random number
  Byte array
sctp.reassembled_in  Reassembled Message in frame
  Frame number
sctp.retransmission  This TSN is a retransmission of one in frame
  Frame number
sctp.retransmission_time  Retransmitted after
  Time duration
sctp.retransmitted  This TSN is retransmitted in frame
  Frame number
sctp.retransmitted_after_ack  Chunk was acked prior to retransmission
  Frame number
sctp.retransmitted_count  TSN was retransmitted this many times
  Unsigned 32-bit integer
sctp.rtt  The RTT to ACK the chunk was
  Time duration
sctp.sack_a_rwnd  Advertised receiver window credit (a_rwnd)
  Unsigned 32-bit integer
sctp.sack_cumulative_tsn_ack  Cumulative TSN ACK
  Unsigned 32-bit integer
sctp.sack_duplicate_tsn  Duplicate TSN
  Unsigned 16-bit integer
sctp.sack_gap_block_end  End
  Unsigned 16-bit integer
sctp.sack_gap_block_end_tsn  End TSN
  Unsigned 32-bit integer
sctp.sack_gap_block_start  Start
  Unsigned 16-bit integer
```

```

sctp.sack_gap_block_start_tsn  Start TSN
    Unsigned 32-bit integer
sctp.sack_nounce_sum  Nounce sum
    Unsigned 8-bit integer
sctp.sack_number_of_duplicated_tsns  Number of duplicated TSNs
    Unsigned 16-bit integer
sctp.sack_number_of_gap_blocks  Number of gap acknowledgement blocks
    Unsigned 16-bit integer
sctp.sack_number_of_tsns_gap_acked  Number of TSNs in gap acknowledgement blocks
    Unsigned 32-bit integer
sctp.shared_key_id  Shared key identifier
    Unsigned 16-bit integer
sctp.shutdown_complete_t_bit  T-Bit
    Boolean
sctp.shutdown_cumulative_tsn_ack  Cumulative TSN Ack
    Unsigned 32-bit integer
sctp.srcport  Source port
    Unsigned 16-bit integer
sctp.supported_chunk_type  Supported chunk type
    Unsigned 8-bit integer
sctp.verification_tag  Verification tag
    Unsigned 32-bit integer

```

#### Subnetwork Dependent Convergence Protocol (sndcp)

```

npdu.fragment  N-PDU Fragment
    Frame number
    N-PDU Fragment
npdu.fragment.error  Defragmentation error
    Frame number
    Defragmentation error due to illegal fragments
npdu.fragment.multipletails  Multiple tail fragments found
    Boolean
    Several tails were found when defragmenting the packet
npdu.fragment.overlap  Fragment overlap
    Boolean
    Fragment overlaps with other fragments
npdu.fragment.overlap.conflict  Conflicting data in fragment overlap
    Boolean
    Overlapping fragments contained conflicting data
npdu.fragment.toolongfragment  Fragment too long
    Boolean
    Fragment contained data past end of packet
npdu.fragments  N-PDU Fragments
    No value
    N-PDU Fragments

```

npdu.reassembled.in Reassembled in  
Frame number  
N-PDU fragments are reassembled in the given packet

sndcp.dcomp DCOMP  
Unsigned 8-bit integer  
Data compression coding

sndcp.f First segment indicator bit  
Boolean  
First segment indicator bit

sndcp.m More bit  
Boolean  
More bit

sndcp.npdu N-PDU  
Unsigned 8-bit integer  
N-PDU

sndcp.nsapi NSAPI  
Unsigned 8-bit integer  
Network Layer Service Access Point Identifier

sndcp.nsapib NSAPI  
Unsigned 8-bit integer  
Network Layer Service Access Point Identifier

sndcp.pcomp PCOMP  
Unsigned 8-bit integer  
Protocol compression coding

sndcp.segment Segment  
Unsigned 16-bit integer  
Segment number

sndcp.t Type  
Boolean  
SN-PDU Type

sndcp.x Spare bit  
Boolean  
Spare bit (should be 0)

**Symantec Enterprise Firewall (symantec)**

symantec.if Interface  
IPv4 address  
Interface

symantec.type Type  
Unsigned 16-bit integer

Unsigned 8-bit integer

sna.xid.type3.12 XID Type 3 Byte 12  
Unsigned 8-bit integer

sna.xid.type3.15 XID Type 3 Byte 15  
Unsigned 8-bit integer

sna.xid.type3.8 Characteristics of XID sender  
Unsigned 16-bit integer

sna.xid.type3.actpu ACTPU suppression indicator  
Boolean

sna.xid.type3.asend\_bind Adaptive BIND pacing support as sender  
Boolean  
Pacing support as sender

```
sna.xid.type3.asend_recv  Adaptive BIND pacing support as receiver
  Boolean
  Pacing support as receive
sna.xid.type3.branch  Branch Indicator
  Unsigned 8-bit integer
sna.xid.type3.brnn  Option Set 1123 Indicator
  Boolean
sna.xid.type3.cp  Control Point Services
  Boolean
sna.xid.type3.cpchange  CP name change support
  Boolean
sna.xid.type3.cpcp  CP-CP session support
  Boolean
sna.xid.type3.dedsvc  Dedicated SVC Indicator
  Boolean
sna.xid.type3.dlc  XID DLC
  Unsigned 8-bit integer
sna.xid.type3.dlen  DLC Dependent Section Length
  Unsigned 8-bit integer
sna.xid.type3.dlur  Dependent LU Requester Indicator
  Boolean
sna.xid.type3.dlus  DLUS Served LU Registration Indicator
  Boolean
sna.xid.type3.exbn  Extended HPR Border Node
  Boolean
sna.xid.type3.gener_bind  Whole BIND PIU generated indicator
  Boolean
  Whole BIND PIU generated
sna.xid.type3.genodai  Generalized ODAI Usage Option
  Boolean
sna.xid.type3.initself  INIT-SELF support
  Boolean
sna.xid.type3.negcomp  Negotiation Complete
  Boolean
sna.xid.type3.negcsup  Negotiation Complete Supported
  Boolean
sna.xid.type3.nonact  Nonactivation Exchange
  Boolean
sna.xid.type3.nwnode  Sender is network node
  Boolean
sna.xid.type3.pacing  Qualifier for adaptive BIND pacing support
  Unsigned 8-bit integer
sna.xid.type3.partg  Parallel TG Support
  Boolean
```

sna.xid.type3.pbn Peripheral Border Node  
Boolean

sna.xid.type3.pucap PU Capabilities  
Boolean

sna.xid.type3.quiesce Quiesce TG Request  
Boolean

sna.xid.type3.recve\_bind Whole BIND PIU required indicator  
Boolean  
Whole BIND PIU required

sna.xid.type3.stand\_bind Stand-Alone BIND Support  
Boolean

sna.xid.type3.state XID exchange state indicator  
Unsigned 16-bit integer

sna.xid.type3.tg XID TG  
Unsigned 8-bit integer

sna.xid.type3.tgshare TG Sharing Prohibited Indicator  
Boolean

                    Byte array
                    T.4 Facsimile data field

t30.t4.frame_count  Frame counter
                    Unsigned 8-bit integer
                    Frame counter

t30.t4.frame_num    T.4 Frame number
                    Unsigned 8-bit integer
                    T.4 Frame number

t30.t4.page_count   Page counter
                    Unsigned 8-bit integer
                    Page counter

```

**T.38 (t38)**

```

data.fragment       Message fragment
                    Frame number

data.fragment.error  Message defragmentation error
                    Frame number

data.fragment.multiple_tails  Message has multiple tail fragments
                    Boolean

data.fragment.overlap  Message fragment overlap
                    Boolean

data.fragment.overlap.conflicts  Message fragment overlapping with conflicting d
                    Boolean

data.fragment.too_long_fragment  Message fragment too long
                    Boolean

data.fragments       Message fragments
                    No value

data.reassembled.in  Reassembled in
                    Frame number

t38.Data_Field_item  Item
                    No value
                    t38.Data_Field_item

t38.IFPPacket        IFPPacket
                    No value
                    t38.IFPPacket

t38.UDPTLPacket      UDPTLPacket
                    No value
                    t38.UDPTLPacket

t38.data_field       data-field
                    Unsigned 32-bit integer
                    t38.Data_Field

```

```
t38.error_recovery error-recovery
    Unsigned 32-bit integer
    t38.T_error_recovery

t38.fec_data fec-data
    Unsigned 32-bit integer
    t38.T_fec_data

t38.fec_data_item Item
    Byte array
    t38.OCTET_STRING

t38.fec_info fec-info
    No value
    t38.T_fec_info

t38.fec_npackets fec-npackets
    Signed 32-bit integer
    t38.INTEGER

t38.field_data field-data
    Byte array
    t38.T_field_data

t38.field_type field-type
    Unsigned 32-bit integer
    t38.T_field_type

t38.primary_ifp_packet primary-ifp-packet
    No value
    t38.T_primary_ifp_packet

t38.secondary_ifp_packets secondary-ifp-packets
    Unsigned 32-bit integer
    t38.T_secondary_ifp_packets

t38.secondary_ifp_packets_item Item
    No value
    t38.OpenType_IFPPacket

t38.seq_number seq-number
    Unsigned 32-bit integer
    t38.T_seq_number

t38.setup Stream setup
    String
    Stream setup, method and frame number

t38.setup-frame Stream frame
    Frame number
    Frame that set up this stream

t38.setup-method Stream Method
    String
    Method used to set up this stream

t38.t30_data t30-data
    Unsigned 32-bit integer
    t38.T30_data

t38.t30_indicator t30-indicator
    Unsigned 32-bit integer
    t38.T30_indicator
```

```
t38.type_of_msg  type-of-msg
                 Unsigned 32-bit integer
                 t38.Type_of_msg
```

**TACACS (tacacs)**

```
tacacs.destaddr  Destination address
                 IPv4 address
                 Destination address

tacacs.destport  Destination port
                 Unsigned 16-bit integer
                 Destination port

tacacs.line      Line
                 Unsigned 16-bit integer
                 Line

tacacs.nonce     Nonce
                 Unsigned 16-bit integer
                 Nonce

tacacs.passlen   Password length
                 Unsigned 8-bit integer
                 Password length

tacacs.reason    Reason
                 Unsigned 8-bit integer
                 Reason

tacacs.response  Response
                 Unsigned 8-bit integer
                 Response

tacacs.result1   Result 1
                 Unsigned 32-bit integer
                 Result 1

tacacs.result2   Result 2
                 Unsigned 32-bit integer
                 Result 2

tacacs.result3   Result 3
                 Unsigned 16-bit integer
                 Result 3

tacacs.type      Type
                 Unsigned 8-bit integer
                 Type

tacacs.userlen   Username length
                 Unsigned 8-bit integer
                 Username length

tacacs.version   Version
                 Unsigned 8-bit integer
                 Version
```

**TACACS+ (tacplus)**

```
tacplus.acct.flags  Flags
    Unsigned 8-bit integer
    Flags

tacplus.flags  Flags
    Unsigned 8-bit integer
    Flags

tacplus.flags.singleconn  Single Connection
    Boolean
    Is this a single connection?

tacplus.flags.unencrypted  Unencrypted
    Boolean
    Is payload unencrypted?

tacplus.majvers  Major version
    Unsigned 8-bit integer
    Major version number

tacplus.minvers  Minor version
    Unsigned 8-bit integer
    Minor version number

tacplus.packet_len  Packet length
    Unsigned 32-bit integer
    Packet length

tacplus.request  Request
    Boolean
    TRUE if TACACS+ request

tacplus.response  Response
    Boolean
    TRUE if TACACS+ response

tacplus.seqno  Sequence number
    Unsigned 8-bit integer
    Sequence number

tacplus.session_id  Session ID
    Unsigned 32-bit integer
    Session ID

tacplus.type  Type
    Unsigned 8-bit integer
    Type
```

**TCP Encapsulation of IPsec Packets (tcpencap)**

```
tcpencap.espzero  ESP zero
    Unsigned 16-bit integer

tcpencap.ikedirection  ISAKMP traffic direction
    Unsigned 16-bit integer

tcpencap.magic  Magic number
    Byte array

tcpencap.magic2  Magic 2
    Byte array
```

```
tcpencap.proto Protocol
    Unsigned 8-bit integer
tcpencap.seq Sequence number
    Unsigned 16-bit integer
tcpencap.unknown Unknown trailer
    Byte array
tcpencap.zero All zero
    Byte array
```

#### **TDMA RTmac Discipline (tdma)**

#### **TEI Management Procedure, Channel D (LAPD) (tei\_management)**

```
tei.action Action
    Unsigned 8-bit integer
    Action Indicator
tei.entity Entity
    Unsigned 8-bit integer
    Layer Management Entity Identifier
tei.extend Extend
    Unsigned 8-bit integer
    Extension Indicator
tei.msg Msg
    Unsigned 8-bit integer
    Message Type
tei.reference Reference
    Unsigned 16-bit integer
    Reference Number
```

#### **TPKT – ISO on TCP – RFC1006 (tpkt)**

```
tpkt.length Length
    Unsigned 16-bit integer
    Length of data unit, including this header
tpkt.reserved Reserved
    Unsigned 8-bit integer
    Reserved, should be 0
tpkt.version Version
    Unsigned 8-bit integer
    Version, only version 3 is defined
```

#### **Tabular Data Stream (tds)**

```
tds.channel Channel
    Unsigned 16-bit integer
    Channel Number
tds.fragment TDS Fragment
    Frame number
    TDS Fragment
```

```
tds.fragment.error    Defragmentation error
    Frame number
    Defragmentation error due to illegal fragments
tds.fragment.multipletails  Multiple tail fragments found
    Boolean
    Several tails were found when defragmenting the packet
tds.fragment.overlap  Segment overlap
    Boolean
    Fragment overlaps with other fragments
tds.fragment.overlap.conflict  Conflicting data in fragment overlap
    Boolean
    Overlapping fragments contained conflicting data
tds.fragment.toolongfragment  Segment too long
    Boolean
    Segment contained data past end of packet
tds.fragments        TDS Fragments
    No value
    TDS Fragments
tds.packet_number    Packet Number
    Unsigned 8-bit integer
    Packet Number
tds.reassembled_in  Reassembled TDS in frame
    Frame number
    This TDS packet is reassembled in this frame
tds.size            Size
    Unsigned 16-bit integer
    Packet Size
tds.status          Status
    Unsigned 8-bit integer
    Frame status
tds.type            Type
    Unsigned 8-bit integer
    Packet Type
tds.window          Window
    Unsigned 8-bit integer
    Window
tds7.message        Message
    String
tds7login.client_pid  Client PID
    Unsigned 32-bit integer
    Client PID
tds7login.client_version  Client version
    Unsigned 32-bit integer
    Client version
tds7login.collation  Collation
    Unsigned 32-bit integer
    Collation
```

```
tds7login.connection_id  Connection ID
    Unsigned 32-bit integer
    Connection ID

tds7login.option_flags1  Option Flags 1
    Unsigned 8-bit integer
    Option Flags 1

tds7login.option_flags2  Option Flags 2
    Unsigned 8-bit integer
    Option Flags 2

tds7login.packet_size    Packet Size
    Unsigned 32-bit integer
    Packet size

tds7login.reserved_flags  Reserved Flags
    Unsigned 8-bit integer
    reserved flags

tds7login.sql_type_flags  SQL Type Flags
    Unsigned 8-bit integer
    SQL Type Flags

tds7login.time_zone      Time Zone
    Unsigned 32-bit integer
    Time Zone

tds7login.total_len      Total Packet Length
    Unsigned 32-bit integer
    TDS7 Login Packet total packet length

tds7login.version        TDS version
    Unsigned 32-bit integer
    TDS version
```

#### **Tango Dissector Using GIOP API (giop-tango)**

#### **Tazmen Sniffer Protocol (tzsp)**

```
tzsp.encap  Encapsulation
    Unsigned 16-bit integer
    Encapsulation

tzsp.original_length  Original Length
    Signed 16-bit integer
    OrigLength

tzsp.sensormac  Sensor Address
    6-byte Hardware (MAC) Address
    Sensor MAC

tzsp.type  Type
    Unsigned 8-bit integer
    Type

tzsp.unknown  Unknown tag
    Byte array
    Unknown
```

```
tzsp.version  Version
  Unsigned 8-bit integer
  Version

tzsp.wlan.channel  Channel
  Unsigned 8-bit integer
  Channel

tzsp.wlan.rate  Rate
  Unsigned 8-bit integer
  Rate

tzsp.wlan.signal  Signal
  Signed 8-bit integer
  Signal

tzsp.wlan.silence  Silence
  Signed 8-bit integer
  Silence

tzsp.wlan.status  Status
  Unsigned 16-bit integer
  Status

tzsp.wlan.status.fcs_err  FCS
  Boolean
  Frame check sequence

tzsp.wlan.status.mac_port  Port
  Unsigned 8-bit integer
  MAC port

tzsp.wlan.status.msg_type  Type
  Unsigned 8-bit integer
  Message type

tzsp.wlan.status.pcf  PCF
  Boolean
  Point Coordination Function

tzsp.wlan.status.undecrypted  Undecrypted
  Boolean
  Undecrypted

tzsp.wlan.time  Time
  Unsigned 32-bit integer
  Time
```

**Telkonet powerline (telkonet)**

```
telkonet.type  Type
  Byte array
  TELKONET type
```

**Telnet (telnet)**

```
telnet.auth.cmd  Auth Cmd
  Unsigned 8-bit integer
  Authentication Command
```

```
telnet.auth.krb5.cmd  Command
    Unsigned 8-bit integer
    Krb5 Authentication sub-command
telnet.auth.mod.cred_fwd  Cred Fwd
    Boolean
    Modifier: Whether client will forward creds or not
telnet.auth.mod.enc  Encrypt
    Unsigned 8-bit integer
    Modifier: How to enable Encryption
telnet.auth.mod.how  How
    Boolean
    Modifier: How to mask
telnet.auth.mod.who  Who
    Boolean
    Modifier: Who to mask
telnet.auth.name  Name
    String
    Name of user being authenticated
telnet.auth.type  Auth Type
    Unsigned 8-bit integer
    Authentication Type
telnet.enc.cmd  Enc Cmd
    Unsigned 8-bit integer
    Encryption command
telnet.enc.type  Enc Type
    Unsigned 8-bit integer
    Encryption type
```

#### **Teredo IPv6 over UDP tunneling (teredo)**

```
teredo.auth  Teredo Authentication header
    No value
    Teredo Authentication header
teredo.auth.aulen  Authentication value length
    Unsigned 8-bit integer
    Authentication value length (AU-len)
teredo.auth.conf  Confirmation byte
    Byte array
    Confirmation byte is zero upon successful authentication.
teredo.auth.id  Client identifier
    Byte array
    Client identifier (ID)
teredo.auth.idlen  Client identifier length
    Unsigned 8-bit integer
    Client identifier length (ID-len)
teredo.auth.nonce  Nonce value
    Byte array
    Nonce value prevents spoofing Teredo server.
```

```

teredo.auth.value  Authentication value
    Byte array
    Authentication value (hash)

teredo.orig  Teredo Origin Indication header
    No value
    Teredo Origin Indication

teredo.orig.addr  Origin IPv4 address
    IPv4 address
    Origin IPv4 address

teredo.orig.port  Origin UDP port
    Unsigned 16-bit integer
    Origin UDP port

```

### **The Armagetron Advanced OpenGL Tron clone (armagetronad)**

```

armagetronad.data  Data
    String
    The actual data (array of shorts in network order)

armagetronad.data_len  DataLen
    Unsigned 16-bit integer
    The length of the data (in shorts)

armagetronad.descriptor_id  Descriptor
    Unsigned 16-bit integer
    The ID of the descriptor (the command)

armagetronad.message  Message
    No value
    A message

armagetronad.message_id  MessageID
    Unsigned 16-bit integer
    The ID of the message (to ack it)

armagetronad.sender_id  SenderID
    Unsigned 16-bit integer
    The ID of the sender (0x0000 for the server)

```

### **TiVoConnect Discovery Protocol (tivoconnect)**

```

tivoconnect.flavor  Flavor
    String
    Protocol Flavor supported by the originator

tivoconnect.identity  Identity
    String
    Unique serial number for the system

tivoconnect.machine  Machine
    String
    Human-readable system name

tivoconnect.method  Method
    String
    Packet was delivered via UDP(broadcast) or TCP(connected)

```

```
tivoconnect.platform Platform
    String
    System platform, either tcd(TiVo) or pc(Computer)
tivoconnect.services Services
    String
    List of available services on the system
tivoconnect.version Version
    String
    System software version
```

**Time Protocol (time)**

```
time.time Time
    Unsigned 32-bit integer
    Seconds since 00:00 (midnight) 1 January 1900 GMT
```

**Time Synchronization Protocol (tsp)**

```
tsp.hopcnt Hop Count
    Unsigned 8-bit integer
    Hop Count
tsp.name Machine Name
    String
    Sender Machine Name
tsp.sec Seconds
    Unsigned 32-bit integer
    Seconds
tsp.sequence Sequence
    Unsigned 16-bit integer
    Sequence Number
tsp.type Type
    Unsigned 8-bit integer
    Packet Type
tsp.usec Microseconds
    Unsigned 32-bit integer
    Microseconds
tsp.version Version
    Unsigned 8-bit integer
    Protocol Version Number
```

**Tiny Transport Protocol (ttp)**

```
ttp.dcredit Delta Credit
    Unsigned 8-bit integer
ttp.icredit Initial Credit
    Unsigned 8-bit integer
ttp.m More Bit
    Boolean
ttp.p Parameter Bit
    Boolean
```

**Token-Ring (tr)**

```
tr.ac Access Control
    Unsigned 8-bit integer

tr.addr Source or Destination Address
    6-byte Hardware (MAC) Address
    Source or Destination Hardware Address

tr.broadcast Broadcast Type
    Unsigned 8-bit integer
    Type of Token-Ring Broadcast

tr.direction Direction
    Unsigned 8-bit integer
    Direction of RIF

tr.dst Destination
    6-byte Hardware (MAC) Address
    Destination Hardware Address

tr.fc Frame Control
    Unsigned 8-bit integer

tr.frame Frame
    Boolean

tr.frame_pcf Frame PCF
    Unsigned 8-bit integer

tr.frame_type Frame Type
    Unsigned 8-bit integer

tr.max_frame_size Maximum Frame Size
    Unsigned 8-bit integer

tr.monitor_cnt Monitor Count
    Unsigned 8-bit integer

tr.priority Priority
    Unsigned 8-bit integer

tr.priority_reservation Priority Reservation
    Unsigned 8-bit integer

tr.rif Ring-Bridge Pairs
    String
    String representing Ring-Bridge Pairs

tr.rif.bridge RIF Bridge
    Unsigned 8-bit integer

tr.rif.ring RIF Ring
    Unsigned 16-bit integer

tr.rif_bytes RIF Bytes
    Unsigned 8-bit integer
    Number of bytes in Routing Information Fields, including the two bytes of Ro

tr.sr Source Routed
    Boolean
    Source Routed
```

tr.src Source  
6-byte Hardware (MAC) Address  
Source Hardware Address

#### **Token-Ring Media Access Control (trmac)**

trmac.dstclass Destination Class  
Unsigned 8-bit integer

trmac.errors.abort Abort Delimiter Transmitted Errors  
Unsigned 8-bit integer

trmac.errors.ac A/C Errors  
Unsigned 8-bit integer

trmac.errors.burst Burst Errors  
Unsigned 8-bit integer

trmac.errors.congestion Receiver Congestion Errors  
Unsigned 8-bit integer

trmac.errors.fc Frame-Copied Errors  
Unsigned 8-bit integer

trmac.errors.freq Frequency Errors  
Unsigned 8-bit integer

trmac.errors.internal Internal Errors  
Unsigned 8-bit integer

trmac.errors.iso Isolating Errors  
Unsigned 16-bit integer

trmac.errors.line Line Errors  
Unsigned 8-bit integer

trmac.errors.lost Lost Frame Errors  
Unsigned 8-bit integer

trmac.errors.noniso Non-Isolating Errors  
Unsigned 16-bit integer

trmac.errors.token Token Errors  
Unsigned 8-bit integer

trmac.length Total Length  
Unsigned 8-bit integer

trmac.mvec Major Vector  
Unsigned 8-bit integer

trmac.naun NAUN  
6-byte Hardware (MAC) Address

trmac.srcclass Source Class  
Unsigned 8-bit integer

trmac.svec Sub-Vector  
Unsigned 8-bit integer

#### **Transaction Capabilities Application Part (tcap)**

tcap.DialoguePDU DialoguePDU  
Unsigned 32-bit integer  
tcap.DialoguePDU

```
tcap.UniDialoguePDU  UniDialoguePDU
    Unsigned 32-bit integer
    tcap.UniDialoguePDU

tcap.__untag_item  Item
    Unsigned 32-bit integer
    tcap.Component

tcap.abort  abort
    No value
    tcap.Abort

tcap.abortCause  abortCause
    Signed 32-bit integer
    tcap.P_Abort_cause

tcap.abort_source  abort-source
    Signed 32-bit integer
    tcap.ABRT_source

tcap.ansiabort  ansiabort
    No value
    tcap.AbortPDU

tcap.ansiconversationWithPerm  ansiconversationWithPerm
    No value
    tcap.T_ansiconversationWithPerm

tcap.version1  version1
    Boolean
```

**Transmission Control Protocol (tcp)**

tcp.ack Acknowledgement number  
Unsigned 32-bit integer

tcp.analysis.ack\_lost\_segment ACKed Lost Packet  
No value  
This frame ACKs a lost segment

tcp.analysis.ack\_rtt The RTT to ACK the segment was  
Time duration  
How long time it took to ACK the segment (RTT)

tcp.analysis.acks\_frame This is an ACK to the segment in frame  
Frame number  
Which previous segment is this an ACK for

tcp.analysis.duplicate\_ack Duplicate ACK  
No value  
This is a duplicate ACK

tcp.analysis.duplicate\_ack\_frame Duplicate to the ACK in frame  
Frame number  
This is a duplicate to the ACK in frame #

tcp.analysis.duplicate\_ack\_num Duplicate ACK #  
Unsigned 32-bit integer  
This is duplicate ACK number #

tcp.analysis.fast\_retransmission Fast Retransmission  
No value  
This frame is a suspected TCP fast retransmission

tcp.analysis.flags TCP Analysis Flags  
No value  
This frame has some of the TCP analysis flags set

tcp.analysis.keep\_alive Keep Alive  
No value  
This is a keep-alive segment

tcp.analysis.keep\_alive\_ack Keep Alive ACK  
No value  
This is an ACK to a keep-alive segment

tcp.analysis.lost\_segment Previous Segment Lost  
No value  
A segment before this one was lost from the capture

tcp.analysis.out\_of\_order Out Of Order  
No value  
This frame is a suspected Out-Of-Order segment

tcp.analysis.retransmission Retransmission  
No value  
This frame is a suspected TCP retransmission

tcp.analysis.reused\_ports TCP Port numbers reused  
No value  
A new tcp session has started with previously used port numbers

tcp.analysis.rto The RTO for this segment was  
Time duration  
How long transmission was delayed before this segment was retransmitted (RTO)

tcp.analysis.rto\_frame RTO based on delta from frame  
Frame number  
This is the frame we measure the RTO from

tcp.analysis.window\_full Window full  
No value  
This segment has caused the allowed window to become 100% full

tcp.analysis.window\_update Window update  
No value  
This frame is a tcp window update

tcp.analysis.zero\_window Zero Window  
No value  
This is a zero-window

tcp.analysis.zero\_window\_probe Zero Window Probe  
No value  
This is a zero-window-probe

tcp.analysis.zero\_window\_probe\_ack Zero Window Probe Ack  
No value  
This is an ACK to a zero-window-probe

tcp.checksum Checksum  
Unsigned 16-bit integer  
Details at: [http://www.wireshark.org/docs/wsug\\_html\\_chunked/ChAdvChecksums.h](http://www.wireshark.org/docs/wsug_html_chunked/ChAdvChecksums.h)

tcp.checksum\_bad Bad Checksum  
Boolean  
True: checksum doesn't match packet content; False: matches content or not c

tcp.checksum\_good Good Checksum  
Boolean  
True: checksum matches packet content; False: doesn't match content or not c

tcp.continuation\_to This is a continuation to the PDU in frame  
Frame number  
This is a continuation to the PDU in frame #

tcp.dstport Destination Port  
Unsigned 16-bit integer

tcp.flags Flags  
Unsigned 8-bit integer

tcp.flags.ack Acknowledgment  
Boolean

tcp.flags.cwr Congestion Window Reduced (CWR)  
Boolean

tcp.flags.ecn ECN-Echo  
Boolean

tcp.flags.fin Fin  
Boolean

tcp.flags.push Push  
Boolean

```
tcp.flags.reset  Reset
                  Boolean

tcp.flags.syn    Syn
                  Boolean

tcp.flags.urg    Urgent
                  Boolean

tcp.hdr_len      Header Length
                  Unsigned 8-bit integer

tcp.len          TCP Segment Len
                  Unsigned 32-bit integer

tcp.nxtseq       Next sequence number
                  Unsigned 32-bit integer

tcp.options      TCP Options
                  Byte array
                  TCP Options

tcp.options.cc   TCP CC Option
                  Boolean
                  TCP CC Option

tcp.options.ccecho  TCP CC Echo Option
                  Boolean
                  TCP CC Echo Option

tcp.options.ccnew  TCP CC New Option
                  Boolean
                  TCP CC New Option

tcp.options.echo  TCP Echo Option
                  Boolean
                  TCP Sack Echo

tcp.options.echo_reply  TCP Echo Reply Option
                  Boolean
                  TCP Echo Reply Option

tcp.options.md5   TCP MD5 Option
                  Boolean
                  TCP MD5 Option

tcp.options.mss   TCP MSS Option
                  Boolean
                  TCP MSS Option

tcp.options.mss_val  TCP MSS Option Value
                  Unsigned 16-bit integer
                  TCP MSS Option Value

tcp.options.qs    TCP QS Option
                  Boolean
                  TCP QS Option

tcp.options.sack  TCP Sack Option
                  Boolean
                  TCP Sack Option
```

```
tcp.options.sack_le  TCP Sack Left Edge
    Unsigned 32-bit integer
    TCP Sack Left Edge

tcp.options.sack_perm  TCP Sack Perm Option
    Boolean
    TCP Sack Perm Option

tcp.options.sack_re  TCP Sack Right Edge
    Unsigned 32-bit integer
    TCP Sack Right Edge

tcp.options.time_stamp  TCP Time Stamp Option
    Boolean
    TCP Time Stamp Option

tcp.options.wscale  TCP Window Scale Option
    Boolean
    TCP Window Option

tcp.options.wscale_val  TCP Windows Scale Option Value
    Unsigned 8-bit integer
    TCP Window Scale Value

tcp.pdu.last_frame  Last frame of this PDU
    Frame number
    This is the last frame of the PDU starting in this segment

tcp.pdu.size  PDU Size
    Unsigned 32-bit integer
    The size of this PDU

tcp.pdu.time  Time until the last segment of this PDU
    Time duration
    How long time has passed until the last frame of this PDU

tcp.port  Source or Destination Port
    Unsigned 16-bit integer

tcp.reassembled_in  Reassembled PDU in frame
    Frame number
    The PDU that doesn't end in this segment is reassembled in this frame

tcp.segment  TCP Segment
    Frame number
    TCP Segment

tcp.segment.error  Reassembling error
    Frame number
    Reassembling error due to illegal segments

tcp.segment.multipletails  Multiple tail segments found
    Boolean
    Several tails were found when reassembling the pdu

tcp.segment.overlap  Segment overlap
    Boolean
    Segment overlaps with other segments

tcp.segment.overlap.conflict  Conflicting data in segment overlap
    Boolean
    Overlapping segments contained conflicting data
```

```
tcp.segment_toolongfragment  Segment too long
    Boolean
    Segment contained data past end of the pdu
tcp.segments  Reassembled TCP Segments
    No value
    TCP Segments
tcp.seq  Sequence number
    Unsigned 32-bit integer
tcp.srcport  Source Port
    Unsigned 16-bit integer
tcp.time_delta  Time since previous frame in this TCP stream
    Time duration
    Time delta from previous frame in this TCP stream
tcp.time_relative  Time since first frame in this TCP stream
    Time duration
    Time relative to first frame in this TCP stream
tcp.urgent_pointer  Urgent pointer
    Unsigned 16-bit integer
tcp.window_size  Window size
    Unsigned 32-bit integer
```

#### **Transparent Inter Process Communication(TIPC) (tipc)**

```
tipc.ack_link_lev_seq  Acknowledged link level sequence number
    Unsigned 32-bit integer
    TIPC Acknowledged link level sequence number

tipc.usr  User
         Unsigned 32-bit integer
         TIPC User

tipc.ver  Version
         Unsigned 32-bit integer
         TIPC protocol version

tipcv2.bcast_msg_type  Message type
                      Unsigned 32-bit integer
                      TIPC Message type

tipcv2.bcast_seq_gap  Broadcast Sequence Gap
                     Unsigned 32-bit integer
                     Broadcast Sequence Gap

tipcv2.bcast_seq_no  Broadcast Sequence Number
                    Unsigned 32-bit integer
                    Broadcast Sequence Number

tipcv2.bcast_tag  Broadcast Tag
                 Unsigned 32-bit integer
                 Broadcast Tag

tipcv2.bearer_id  Bearer identity
                 Unsigned 32-bit integer
                 Bearer identity

tipcv2.bearer_instance  Bearer Instance
                       String
                       Bearer instance used by the sender node for this link

tipcv2.bearer_level_orig_addr  Bearer Level Originating Address
                              Byte array
                              Bearer Level Originating Address

tipcv2.bitmap  Bitmap
              Byte array
              Bitmap, indicating to which nodes within that cluster the sending node has d
```

```
tipcv2.broadcast_ack_no  Broadcast Acknowledge Number
    Unsigned 32-bit integer
    Broadcast Acknowledge Number

tipcv2.bundler_msg_type  Message type
    Unsigned 32-bit integer
    TIPC Message type

tipcv2.changeover_msg_type  Message type
    Unsigned 32-bit integer
    TIPC Message type

tipcv2.cluster_address  Cluster Address
    String
    The remote cluster concerned by the table

tipcv2.conn_mgr_msg_ack  Number of Messages Acknowledged
    Unsigned 32-bit integer
    Number of Messages Acknowledged

tipcv2.connmgr_msg_type  Message type
    Unsigned 32-bit integer
    TIPC Message type

tipcv2.data_msg_type  Message type
    Unsigned 32-bit integer
    TIPC Message type

tipcv2.dest_node  Destination Node
    String
    TIPC Destination Node

tipcv2.destination_domain  Destination Domain
    String
    The domain to which the link request is directed

tipcv2.dist_dist  Route Distributor Dist
    Unsigned 32-bit integer
    Route Distributor Dist

tipcv2.dist_scope  Route Distributor Scope
    Unsigned 32-bit integer
    Route Distributor Scope

tipcv2.errorcode  Error code
    Unsigned 32-bit integer
    Error code

tipcv2.fragment_msg_number  Fragment Message Number
    Unsigned 32-bit integer
    Fragment Message Number

tipcv2.fragment_number  Fragment Number
    Unsigned 32-bit integer
    Fragment Number

tipcv2.fragmenter_msg_type  Message type
    Unsigned 32-bit integer
    TIPC Message type

tipcv2.item_size  Item Size
    Unsigned 32-bit integer
    Item Size
```

```
tipcv2.link_level_ack_no  Link Level Acknowledge Number
    Unsigned 32-bit integer
    Link Level Acknowledge Number

tipcv2.link_level_seq_no  Link Level Sequence Number
    Unsigned 32-bit integer
    Link Level Sequence Number

tipcv2.link_msg_type      Message type
    Unsigned 32-bit integer
    TIPC Message type

tipcv2.link_prio         Link Priority
    Unsigned 32-bit integer
    Link Priority

tipcv2.link_tolerance    Link Tolerance (ms)
    Unsigned 32-bit integer
    Link Tolerance in ms

tipcv2.local_router      Local Router
    String
    Local Router

tipcv2.lookup_scope      Lookup Scope
    Unsigned 32-bit integer
    Lookup Scope

tipcv2.max_packet        Max Packet
    Unsigned 32-bit integer
    Max Packet

tipcv2.media_id          Media Id
    Unsigned 32-bit integer
    Media Id

tipcv2.msg_count         Message Count
    Unsigned 32-bit integer
    Message Count

tipcv2.multicast_lower   Multicast lower bound
    Unsigned 32-bit integer
    Multicast port name instance lower bound

tipcv2.multicast_upper   Multicast upper bound
    Unsigned 32-bit integer
    Multicast port name instance upper bound

tipcv2.naming_msg_type   Message type
    Unsigned 32-bit integer
    TIPC Message type

tipcv2.network_id        Network Identity
    Unsigned 32-bit integer
    The sender node's network identity

tipcv2.network_plane     Network Plane
    Unsigned 32-bit integer
    Network Plane

tipcv2.network_region    Network Region
    String
    Network Region
```

```
tipcv2.next_sent_broadcast  Next Sent Broadcast
    Unsigned 32-bit integer
    Next Sent Broadcast

tipcv2.next_sent_packet    Next Sent Packet
    Unsigned 32-bit integer
    Next Sent Packet

tipcv2.node_address       Node Address
    String
    Which node the route addition/loss concern

tipcv2.opt_p              Options Position
    Unsigned 32-bit integer
    Options Position

tipcv2.orig_node          Originating Node
    String
    TIPC Originating Node

tipcv2.port_id_node       Port Id Node
    String
    Port Id Node

tipcv2.port_name_instance Port name instance
    Unsigned 32-bit integer
    Port name instance

tipcv2.port_name_type     Port name type
    Unsigned 32-bit integer
    Port name type

tipcv2.prev_node          Previous Node
    String
    TIPC Previous Node

tipcv2.probe              Probe
    Unsigned 32-bit integer
    probe

tipcv2.redundant_link     Redundant Link
    Unsigned 32-bit integer
    Redundant Link

tipcv2.remote_router      Remote Router
    String
    Remote Router

tipcv2.req_links          Requested Links
    Unsigned 32-bit integer
    Requested Links

tipcv2.rer_cnt            Reroute Counter
    Unsigned 32-bit integer
    Reroute Counter

tipcv2.route_msg_type     Message type
    Unsigned 32-bit integer
    TIPC Message type

tipcv2.seq_gap            Sequence Gap
    Unsigned 32-bit integer
    Sequence Gap
```

```
tipcv2.session_no  Session Number
                  Unsigned 32-bit integer
                  Session Number

tipcv2.timestamp  Timestamp
                  Unsigned 32-bit integer
                  OS-dependent Timestamp

tipcv2.tseq_no    Transport Sequence No
                  Unsigned 32-bit integer
                  Transport Level Sequence Number
```

### **Transparent Network Substrate Protocol (tns)**

```
tns.abort         Abort
                  Boolean
                  Abort

tns.abort_data    Abort Data
                  String
                  Abort Data

tns.abort_reason_system  Abort Reason (User)
                  Unsigned 8-bit integer
                  Abort Reason from System

tns.abort_reason_user    Abort Reason (User)
                  Unsigned 8-bit integer
                  Abort Reason from Application

tns.accept        Accept
                  Boolean
                  Accept

tns.accept_data   Accept Data
                  String
                  Accept Data

tns.accept_data_length  Accept Data Length
                  Unsigned 16-bit integer
                  Length of Accept Data

tns.accept_data_offset  Offset to Accept Data
                  Unsigned 16-bit integer
                  Offset to Accept Data

tns.compat_version  Version (Compatible)
                  Unsigned 16-bit integer
                  Version (Compatible)

tns.connect        Connect
                  Boolean
                  Connect

tns.connect_data   Connect Data
                  String
                  Connect Data

tns.connect_data_length  Length of Connect Data
                  Unsigned 16-bit integer
                  Length of Connect Data
```

```
tns.connect_data_max  Maximum Receivable Connect Data
    Unsigned 32-bit integer
    Maximum Receivable Connect Data

tns.connect_data_offset  Offset to Connect Data
    Unsigned 16-bit integer
    Offset to Connect Data

tns.connect_flags.enablena  NA services enabled
    Boolean
    NA services enabled

tns.connect_flags.ichg  Interchange is involved
    Boolean
    Interchange is involved

tns.connect_flags.nalink  NA services linked in
    Boolean
    NA services linked in

tns.connect_flags.nareq  NA services required
    Boolean
    NA services required

tns.connect_flags.wantna  NA services wanted
    Boolean
    NA services wanted

tns.connect_flags0  Connect Flags 0
    Unsigned 8-bit integer
    Connect Flags 0

tns.connect_flags1  Connect Flags 1
    Unsigned 8-bit integer
    Connect Flags 1

tns.control  Control
    Boolean
    Control

tns.control.cmd  Control Command
    Unsigned 16-bit integer
    Control Command

tns.control.data  Control Data
    Byte array
    Control Data

tns.data  Data
    Boolean
    Data

tns.data_flag  Data Flag
    Unsigned 16-bit integer
    Data Flag

tns.data_flag.c  Confirmation
    Boolean
    Confirmation

tns.data_flag.dic  Do Immediate Confirmation
    Boolean
    Do Immediate Confirmation
```

```
tns.data_flag.eof    End of File
    Boolean
    End of File

tns.data_flag.more  More Data to Come
    Boolean
    More Data to Come

tns.data_flag.rc    Request Confirmation
    Boolean
    Request Confirmation

tns.data_flag.reserved  Reserved
    Boolean
    Reserved

tns.data_flag.rts   Request To Send
    Boolean
    Request To Send

tns.data_flag.send  Send Token
    Boolean
    Send Token

tns.data_flag.sntt  Send NT Trailer
    Boolean
    Send NT Trailer

tns.header_checksum  Header Checksum
    Unsigned 16-bit integer
    Checksum of Header Data

tns.length           Packet Length
    Unsigned 16-bit integer
    Length of TNS packet

tns.line_turnaround  Line Turnaround Value
    Unsigned 16-bit integer
    Line Turnaround Value

tns.marker           Marker
    Boolean
    Marker

tns.marker.data      Marker Data
    Unsigned 16-bit integer
    Marker Data

tns.marker.databyte  Marker Data Byte
    Unsigned 8-bit integer
    Marker Data Byte

tns.marker.type      Marker Type
    Unsigned 8-bit integer
    Marker Type

tns.max_tdu_size     Maximum Transmission Data Unit Size
    Unsigned 16-bit integer
    Maximum Transmission Data Unit Size

tns.nt_proto_characteristics  NT Protocol Characteristics
    Unsigned 16-bit integer
    NT Protocol Characteristics
```

```
tns.ntp_flag.asio  ASync IO Supported
  Boolean
  ASync IO Supported

tns.ntp_flag.cbio  Callback IO supported
  Boolean
  Callback IO supported

tns.ntp_flag.crel  Confirmed release
  Boolean
  Confirmed release

tns.ntp_flag.dfio  Full duplex IO supported
  Boolean
  Full duplex IO supported

tns.ntp_flag.dtest Data test
  Boolean
  Data Test

tns.ntp_flag.grant Can grant connection to another
  Boolean
  Can grant connection to another

tns.ntp_flag.handoff Can handoff connection to another
  Boolean
  Can handoff connection to another

tns.ntp_flag.hangon Hangon to listener connect
  Boolean
  Hangon to listener connect

tns.ntp_flag.pio   Packet oriented IO
  Boolean
  Packet oriented IO

tns.ntp_flag.sigio Generate SIGIO signal
  Boolean
  Generate SIGIO signal

tns.ntp_flag.sigpipe Generate SIGPIPE signal
  Boolean
  Generate SIGPIPE signal

tns.ntp_flag.sigurg Generate SIGURG signal
  Boolean
  Generate SIGURG signal

tns.ntp_flag.srun  Spawner running
  Boolean
  Spawner running

tns.ntp_flag.tduio TDU based IO
  Boolean
  TDU based IO

tns.ntp_flag.testop Test operation
  Boolean
  Test operation

tns.ntp_flag.urgentio Urgent IO supported
  Boolean
  Urgent IO supported
```

```
tns.packet_checksum  Packet Checksum
    Unsigned 16-bit integer
    Checksum of Packet Data

tns.redirect  Redirect
    Boolean
    Redirect

tns.redirect_data  Redirect Data
    String
    Redirect Data

tns.redirect_data_length  Redirect Data Length
    Unsigned 16-bit integer
    Length of Redirect Data

tns.refuse  Refuse
    Boolean
    Refuse

tns.refuse_data  Refuse Data
    String
    Refuse Data

tns.refuse_data_length  Refuse Data Length
    Unsigned 16-bit integer
    Length of Refuse Data

tns.refuse_reason_system  Refuse Reason (System)
    Unsigned 8-bit integer
    Refuse Reason from System

tns.refuse_reason_user  Refuse Reason (User)
    Unsigned 8-bit integer
    Refuse Reason from Application

tns.request  Request
    Boolean
    TRUE if TNS request

tns.reserved_byte  Reserved Byte
    Byte array
    Reserved Byte

tns.response  Response
    Boolean
    TRUE if TNS response

tns.sdu_size  Session Data Unit Size
    Unsigned 16-bit integer
    Session Data Unit Size

tns.service_options  Service Options
    Unsigned 16-bit integer
    Service Options

tns.so_flag.ap  Attention Processing
    Boolean
    Attention Processing

tns.so_flag.bconn  Broken Connect Notify
    Boolean
    Broken Connect Notify
```

```
tns.so_flag.dc1 Don't Care
  Boolean
  Don't Care

tns.so_flag.dc2 Don't Care
  Boolean
  Don't Care

tns.so_flag.dio Direct IO to Transport
  Boolean
  Direct IO to Transport

tns.so_flag.fd Full Duplex
  Boolean
  Full Duplex

tns.so_flag.hc Header Checksum
  Boolean
  Header Checksum

tns.so_flag.hd Half Duplex
  Boolean
  Half Duplex

tns.so_flag.pc Packet Checksum
  Boolean
  Packet Checksum

tns.so_flag.ra Can Receive Attention
  Boolean
  Can Receive Attention

tns.so_flag.sa Can Send Attention
  Boolean
  Can Send Attention

tns.trace_cf1 Trace Cross Facility Item 1
  Unsigned 32-bit integer
  Trace Cross Facility Item 1

tns.trace_cf2 Trace Cross Facility Item 2
  Unsigned 32-bit integer
  Trace Cross Facility Item 2

tns.trace_cid Trace Unique Connection ID
  Unsigned 64-bit integer
  Trace Unique Connection ID

tns.type Packet Type
  Unsigned 8-bit integer
  Type of TNS packet

tns.value_of_one Value of 1 in Hardware
  Byte array
  Value of 1 in Hardware

tns.version Version
  Unsigned 16-bit integer
  Version
```

**Transport Adapter Layer Interface v1.0, RFC 3094 (tali)**

```

tali.msu_length Length
    Unsigned 16-bit integer
    TALI MSU Length

tali.opcode Opcode
    String
    TALI Operation Code

tali.sync Sync
    String
    TALI SYNC

```

**Transport-Neutral Encapsulation Format (tnef)**

```

    Unsigned 16-bit integer
tnef.version  Version
    Unsigned 32-bit integer
```

#### **Trapeze Access Point Access Protocol (tapa)**

```
tapa.discover.flags  Flags
    Unsigned 8-bit integer
tapa.discover.length  Length
    Unsigned 16-bit integer
tapa.discover.newtlv.length  New tlv length
    Unsigned 16-bit integer
tapa.discover.newtlv.pad  New tlv padding
    Unsigned 8-bit integer
tapa.discover.newtlv.type  New tlv type
    Unsigned 8-bit integer
```

```
tapa.discover.newtlv.valuehex  New tlv value
    Byte array
tapa.discover.newtlv.valuetext  New tlv value
    String
tapa.discover.reply.bias  Reply bias
    Unsigned 8-bit integer
tapa.discover.reply.pad  Reply pad
    Byte array
tapa.discover.reply.switchip  Switch Ip
    IPv4 address
tapa.discover.reply.unused  Reply unused
    Unsigned 8-bit integer
tapa.discover.req.length  Req length
    Unsigned 16-bit integer
tapa.discover.req.pad  Req padding
    Unsigned 8-bit integer
tapa.discover.req.type  Req type
    Unsigned 8-bit integer
tapa.discover.req.value  Req value
    Byte array
tapa.discover.type  Type
    Unsigned 8-bit integer
tapa.discover.unknown  Tapa unknown packet
    Byte array
tapa.tunnel.0804  Tapa tunnel 0804
    Unsigned 16-bit integer
tapa.tunnel.dmac  Tapa tunnel dest mac
    6-byte Hardware (MAC) Address
tapa.tunnel.five  Tapa tunnel five
    Unsigned 8-bit integer
tapa.tunnel.length  Tapa tunnel length
    Unsigned 16-bit integer
tapa.tunnel.remaining  Tapa tunnel all data
    Byte array
tapa.tunnel.seqno  Tapa tunnel seqno
    Unsigned 16-bit integer
tapa.tunnel.smac  Tapa tunnel src mac
    6-byte Hardware (MAC) Address
tapa.tunnel.tags  Tapa tunnel tags, seqno, pad
    Byte array
tapa.tunnel.type  Tapa tunnel type
    Unsigned 8-bit integer
tapa.tunnel.version  Tapa tunnel version
    Unsigned 8-bit integer
```

tapa.tunnel.zero Tapa tunnel zeroes  
Byte array

### Trivial File Transfer Protocol (tftp)

tftp.block Block  
Unsigned 16-bit integer  
Block number

tftp.destination\_file DESTINATION File  
String  
TFTP source file name

tftp.error.code Error code  
Unsigned 16-bit integer  
Error code in case of TFTP error message

tftp.error.message Error message  
String  
Error string in case of TFTP error message

tftp.opcode Opcode  
Unsigned 16-bit integer  
TFTP message type

tftp.option.name Option name  
String

tftp.option.value Option value  
String

tftp.source\_file Source File  
String  
TFTP source file name

tftp.type Type  
String  
TFTP transfer type

### TwinCAT IO-RAW (ioraw)

ioraw.data VarData  
No value

ioraw.header Header  
No value

ioraw.summary Summary of the IoRaw Packet  
String

### TwinCAT NV (tc\_nv)

tc\_nv.count Count  
Unsigned 16-bit integer

tc\_nv.cycleindex CycleIndex  
Unsigned 16-bit integer

tc\_nv.data Data  
Byte array

tc\_nv.hash Hash  
Unsigned 16-bit integer

```
tc_nv.header  Header
              No value
tc_nv.id     Id
              Unsigned 16-bit integer
tc_nv.length Length
              Unsigned 16-bit integer
tc_nv.publisher Publisher
              Byte array
tc_nv.quality Quality
              Unsigned 16-bit integer
tc_nv.summary Summary of the Nv Packet
              Byte array
tc_nv.varheader VarHeader
              No value
tc_nv.variable Variable
              Byte array
```

#### **UDP Encapsulation of IPsec Packets (udpencap)**

##### **UNISTIM Protocol (unistim)**

```
uftp.blocksize UFTP Datablock Size
               Unsigned 32-bit integer
uftp.cmd       UFTP CMD
               Unsigned 8-bit integer
uftp.datablock UFTP Data Block
               Byte array
uftp.filename  UFTP Filename
               String
uftp.limit     UFTP Datablock Limit
               Unsigned 8-bit integer
unistim.acd.super.control ACD Supervisor Control
                  Boolean
unistim.add    UNISTIM CMD Address
               Unsigned 8-bit integer
unistim.alert.cad.sel  Alerting Cadence Select
                  Unsigned 8-bit integer
unistim.alert.warb.select Alerting Warbler Select
                  Unsigned 8-bit integer
unistim.apb.operation.data APB Operation Data
                  Byte array
unistim.apb.param.len  APB Operation Parameter Length
                  Unsigned 8-bit integer
unistim.apb.volume.rpt APB Volume Report
                  Unsigned 8-bit integer
```

```
unistim.arrow.direction  Arrow Display Direction
                          Unsigned 8-bit integer
unistim.audio.aa.vol.rpt  Audio Manager Auto Adjust Volume RPT
                          Boolean
unistim.audio.adj.volume  Query Audio Manager Adjustable Receive Volume
                          Boolean
unistim.audio.alerting    Query Audio Manager Alerting
                          Boolean
unistim.audio.apb.number  APB Number
                          Unsigned 8-bit integer
unistim.audio.apb.op.code APB Operation Code
                          Unsigned 8-bit integer
unistim.audio.attenuated.on Audio Manager Transducer Tone Attenuated
                          Boolean
unistim.audio.attr        Query Audio Manager Attributes
                          Boolean
unistim.audio.bytes.per.frame Bytes Per Frame
                          Unsigned 16-bit integer
unistim.audio.def.volume  Query Audio Manager Default Receive Volume
                          Boolean
unistim.audio.desired.jitter Desired Jitter
                          Unsigned 8-bit integer
unistim.audio.direction.codes Stream Direction Code
                          Unsigned 8-bit integer
unistim.audio.frf.11     FRF.11 Enable
                          Boolean
unistim.audio.handset    Query Audio Manager Handset
                          Boolean
unistim.audio.hd.on.air  HD On Air
                          Boolean
unistim.audio.headset    Query Audio Manager Headset
                          Boolean
unistim.audio.hs.on.air  HS On Air
                          Boolean
unistim.audio.max.tone   Audio Manager Enable Max Tone Volume
                          Boolean
unistim.audio.mute       Audio Manager Mute
                          Boolean
unistim.audio.nat.ip     NAT IP Address
                          IPv4 address
unistim.audio.nat.port   NAT Port
                          Unsigned 16-bit integer
unistim.audio.options    Query Audio Manager Options
                          Boolean
```

```
unistim.audio.opts.adj.vol  Audio Manager Adjust Volume
    Boolean
unistim.audio.phone  Audio Cmd (phone)
    Unsigned 8-bit integer
unistim.audio.precedence  Precedence
    Unsigned 8-bit integer
unistim.audio.rtcp.bucket.id  RTCP Bucket ID
    Unsigned 8-bit integer
unistim.audio.rtp.type  RTP Type
    Unsigned 8-bit integer
unistim.audio.rx.tx  Audio Manager RX or TX
    Boolean
unistim.audio.rx.vol.ceiling  RX Volume at Ceiling
    Boolean
unistim.audio.rx.vol.floor  RX Volume at Floor
    Boolean
unistim.audio.sample.rate  Sample Rate
    Unsigned 8-bit integer
unistim.audio.sidetone.disable  Disable Sidetone
    Boolean
unistim.audio.squelch  Audio Manager Noise Squelch
    Boolean
unistim.audio.stream.direction  Audio Stream Direction
    Unsigned 8-bit integer
unistim.audio.stream.id  Audio Manager Stream ID
    Unsigned 8-bit integer
unistim.audio.stream.state  Audio Stream State
    Boolean
unistim.audio.switch  Audio Cmd (switch)
    Unsigned 8-bit integer
unistim.audio.tone.level  Tone Level
    Unsigned 8-bit integer
unistim.audio.transducer.on  Audio Manager Transducer Based Tone On
    Unsigned 8-bit integer
unistim.audio.type.service  Type of Service
    Unsigned 8-bit integer
unistim.audio.volume.adj  Volume Adjustments
    Boolean
unistim.audio.volume.id  Audio Manager Default Receive Volume ID
    Unsigned 8-bit integer
unistim.audio.volume.up  Volume Up
    Boolean
unistim.auto.adj.rx.vol  Auto Adjust RX Volume
    Boolean
```

```
unistim.auto.noise.squelch  Automatic Squelch
    Boolean

unistim.basic.attrs  Query Basic Manager Attributes
    Boolean
    Basic Query Attributes

unistim.basic.code  Query Basic Manager Prod Eng Code
    Boolean
    Basic Query Production Engineering Code

unistim.basic.eeprom.data  EEPROM Data
    Byte array

unistim.basic.element.id  Basic Element ID
    Unsigned 8-bit integer

unistim.basic.eng.code  Product Engineering Code for phone
    String

unistim.basic.fw  Query Basic Switch Firmware
    Boolean
    Basic Query Firmware

unistim.basic.fw.ver  Basic Phone Firmware Version
    String

unistim.basic.gray  Query Basic Manager Gray Mkt Info
    Boolean
    Basic Query Gray Market Info

unistim.basic.hw.id  Basic Phone Hardware ID
    Byte array

unistim.basic.hwid  Query Basic Manager Hardware ID
    Boolean
    Basic Query Hardware ID

unistim.basic.opts  Query Basic Manager Options
    Boolean
    Basic Query Options

unistim.basic.phone  Basic Cmd (phone)
    Unsigned 8-bit integer

unistim.basic.query  Query Basic Manager
    Unsigned 8-bit integer
    INITIAL PHONE QUERY

unistim.basic.secure  Basic Switch Options Secure Code
    Boolean

unistim.basic.switch  Basic Cmd (switch)
    Unsigned 8-bit integer

unistim.basic.type  Query Basic Manager Phone Type
    Boolean
    Basic Query Phone Type

unistim.bit.fields  FLAGS
    Boolean

unistim.broadcast.day  Day
    Unsigned 8-bit integer
```

```
unistim.broadcast.hour    Hour
    Unsigned 8-bit integer
unistim.broadcast.minute  Minute
    Unsigned 8-bit integer
unistim.broadcast.month   Month
    Unsigned 8-bit integer
unistim.broadcast.phone   Broadcas Cmd (phone)
    Unsigned 8-bit integer
unistim.broadcast.second  Second
    Unsigned 8-bit integer
unistim.broadcast.switch  Broadcast Cmd (switch)
    Unsigned 8-bit integer
unistim.broadcast.year    Year
    Unsigned 8-bit integer
unistim.cadence.select    Cadence Select
    Unsigned 8-bit integer
unistim.clear.bucket      Clear Bucket Counter
    Boolean
unistim.config.element    Configure Network Element
    Unsigned 8-bit integer
unistim.conspic.prog.keys  Conspicuous and Programmable Keys Same
    Boolean
unistim.context.width     Phone Context Width
    Unsigned 8-bit integer
unistim.current.rx.vol.level  Current RX Volume Level
    Unsigned 8-bit integer
unistim.current.rx.vol.range  Current RX Volume Range
    Unsigned 8-bit integer
unistim.current.volume.rpt  Current APB Volume Report
    Unsigned 8-bit integer
unistim.cursor.blink      Should Cursor Blink
    Boolean
unistim.cursor.move.cmd    Cursor Movement Command
    Unsigned 8-bit integer
unistim.cursor.skey.id     Soft Key Id
    Unsigned 8-bit integer
unistim.date.width        Phone Date Width
    Unsigned 8-bit integer
unistim.diag.enabled       Diagnostic Command Enabled
    Boolean
unistim.display.char.address  Display Character Address
    Unsigned 8-bit integer
unistim.display.clear.all.sks  Clear All Soft Key Labels
    Boolean
```

```
unistim.display.clear.context  Context Field in InfoBar
  Boolean
unistim.display.clear.date     Date Field
  Boolean
unistim.display.clear.left     Clear Left
  Boolean
unistim.display.clear.line     Line Data
  Boolean
unistim.display.clear.line1    Line 1
  Boolean
unistim.display.clear.line2    Line 2
  Boolean
unistim.display.clear.line3    Line 3
  Boolean
unistim.display.clear.line4    Line 4
  Boolean
unistim.display.clear.line5    Line 5
  Boolean
unistim.display.clear.line6    Line 6
  Boolean
unistim.display.clear.line7    Line 7
  Boolean
unistim.display.clear.line8    Line 8
  Boolean
unistim.display.clear.numeric  Numeric Index Field in InfoBar
  Boolean
unistim.display.clear.right    Clear Right
  Boolean
unistim.display.clear.sbar.icon1  Status Bar Icon 1
  Boolean
unistim.display.clear.sbar.icon2  Status Bar Icon 2
  Boolean
unistim.display.clear.sbar.icon3  Status Bar Icon 3
  Boolean
unistim.display.clear.sbar.icon4  Status Bar Icon 4
  Boolean
unistim.display.clear.sbar.icon5  Status Bar Icon 5
  Boolean
unistim.display.clear.sbar.icon6  Status Bar Icon 6
  Boolean
unistim.display.clear.sbar.icon7  Status Bar Icon 7
  Boolean
unistim.display.clear.sbar.icon8  Status Bar Icon 8
  Boolean
```

```
unistim.display.clear.sk.label.id  Soft Key Label ID
    Unsigned 8-bit integer
unistim.display.clear.soft.key1    Soft Key 1
    Boolean
unistim.display.clear.soft.key2    Soft Key 2
    Boolean
unistim.display.clear.soft.key3    Soft Key 3
    Boolean
unistim.display.clear.soft.key4    Soft Key 4
    Boolean
unistim.display.clear.soft.key5    Soft Key 5
    Boolean
unistim.display.clear.soft.key6    Soft Key 6
    Boolean
unistim.display.clear.soft.key7    Soft Key 7
    Boolean
unistim.display.clear.soft.key8    Soft Key 8
    Boolean
unistim.display.clear.softkey      Soft Key
    Boolean
unistim.display.clear.softkey.label Soft Key Label
    Boolean
unistim.display.clear.time         Time Field
    Boolean
unistim.display.context.field      Context Info Bar Field
    Unsigned 8-bit integer
unistim.display.context.format     Context Info Bar Format
    Unsigned 8-bit integer
unistim.display.cursor.move        Cursor Move
    Boolean
unistim.display.date.format        Date Format
    Unsigned 8-bit integer
unistim.display.highlight          Highlight
    Boolean
unistim.display.line.number        Display Line Number
    Unsigned 8-bit integer
unistim.display.phone              Display Cmd (phone)
    Unsigned 8-bit integer
unistim.display.shift.left         Shift Left
    Boolean
unistim.display.shift.right        Shift Right
    Boolean
unistim.display.statusbar.icon     Status Bar Icon
    Boolean
```

```
unistim.display.switch  Display Cmd (switch)
                        Unsigned 8-bit integer
unistim.display.text.tag  Tag for text
                        Unsigned 8-bit integer
unistim.display.time.format  Time Format
                        Unsigned 8-bit integer
unistim.display.use.date.format  Use Date Format
                        Boolean
unistim.display.use.time.format  Use Time Format
                        Boolean
unistim.display.write.address.char.pos  Character Position or Soft-Label Key ID
                        Unsigned 8-bit integer
unistim.destructive.active  Destructive/Additive
                        Boolean
unistim.dont.force.active  Don't Force Active
                        Boolean
unistim.download.action  Download Server Action
                        Unsigned 8-bit integer
unistim.download.address  Download Server Address
                        Unsigned 32-bit integer
unistim.download.failover  Download Failover Server ID
                        Unsigned 8-bit integer
unistim.download.id  Download Server ID
                        Unsigned 8-bit integer
unistim.download.port  Download Server Port
                        Unsigned 16-bit integer
unistim.download.retry  Download Retry Count
                        Unsigned 8-bit integer
unistim.dynam.cksum  Basic Phone EEPROM Dynamic Checksum
                        Unsigned 8-bit integer
unistim.early.packet.thresh  Threshold in x/8000 sec where packets are too early
                        Unsigned 32-bit integer
unistim.eeprom.insane  EEPROM Insane
                        Boolean
unistim.eeprom.unsafe  EEPROM Unsafe
                        Boolean
unistim.enable.annexa  Enable Annex A
                        Boolean
unistim.enable.annexb  Enable Annex B
                        Boolean
unistim.enable.diag  Network Manager Enable DIAG
                        Boolean
unistim.enable.network.rel.udp  Network Manager Enable RUDP
                        Boolean
```

```
unistim.exist.copy.key  Copy Key Exists
                        Boolean
unistim.exist.hd.key   Headset Key Exists
                        Boolean
unistim.exist.mute.key  Mute Key Exists
                        Boolean
unistim.exist.mwi.key  Message Waiting Indicator Exists
                        Boolean
unistim.exist.quit.key  Quit Key Exists
                        Boolean
unistim.far.ip.address  Distant IP Address for RT[C]P
                        IPv4 address
unistim.far.rtcp.port  Distant RTCP Port
                        Unsigned 16-bit integer
unistim.far.rtp.port   Distant RTP Port
                        Unsigned 16-bit integer
unistim.field.context  Context Field
                        Boolean
unistim.field.numeric  Numeric Index Field
                        Boolean
unistim.field.text.line  Text Line
                        Boolean
unistim.generic.data   DATA
                        String
unistim.handsfree.support  Handsfree supported
                        Boolean
unistim.high.water.mark  Threshold of audio frames where jitter buffer removes f
                        Unsigned 8-bit integer
unistim.hilite.end.pos  Display Highlight End Position
                        Unsigned 8-bit integer
unistim.hilite.start.pos  Display Highlight Start Position
                        Unsigned 8-bit integer
unistim.icon.cadence   Icon Cadence
                        Unsigned 8-bit integer

TRUE if Reply Request

uts.retxrequest ReTxRequest  
Boolean  
TRUE if Re-transmit Request

uts.rid RID  
Unsigned 8-bit integer  
Remote Identifier address

uts.sid SID  
Unsigned 8-bit integer  
Site Identifier address

#### **Universal Computer Protocol (ucp)**

ucp.hdr.LEN Length  
Unsigned 16-bit integer  
Total number of characters between <stx>...<etx>.

ucp.hdr.OT Operation  
Unsigned 8-bit integer  
The operation that is requested with this message.

ucp.hdr.O\_R Type  
Unsigned 8-bit integer  
Your basic 'is a request or response'.

ucp.hdr.TRN Transaction Reference Number  
Unsigned 8-bit integer  
Transaction number for this command, used in windowing.

ucp.message Data  
No value  
The actual message or data.

ucp.parm.Data Data  
No value  
The actual content of the operation.

ucp.parm.AAC AAC  
String  
Accumulated charges.

ucp.parm.AC AC  
String  
Authentication code.

ucp.parm.ACK (N)Ack  
Unsigned 8-bit integer  
Positive or negative acknowledge of the operation.

ucp.parm.AMsg AMsg  
String  
The alphanumeric message that is being sent.

ucp.parm.A\_D A\_D  
Unsigned 8-bit integer  
Add to/delete from fixed subscriber address list record.

ucp.parm.AdC AdC  
String  
Address code recipient.

ucp.parm.BAS BAS  
Unsigned 8-bit integer  
Barring status flag.

ucp.parm.CPg CPg  
String  
Reserved for Code Page.

ucp.parm.CS CS  
Unsigned 8-bit integer  
Additional character set number.

ucp.parm.CT CT  
Date/Time stamp  
Accumulated charges timestamp.

ucp.parm.DAdC DAdC  
String  
Diverted address code.

ucp.parm.DCs DCs  
Unsigned 8-bit integer  
Data coding scheme (deprecated).

ucp.parm.DD DD  
Unsigned 8-bit integer  
Deferred delivery requested.

ucp.parm.DDT DDT  
Date/Time stamp  
Deferred delivery time.

ucp.parm.DSCTS DSCTS  
Date/Time stamp  
Delivery timestamp.

```
ucp.parm.Dst  Dst
    Unsigned 8-bit integer
    Delivery status.

ucp.parm.EC  Error code
    Unsigned 8-bit integer
    The result of the requested operation.

ucp.parm.GA  GA
    String
    GA?? haven't got a clue.

ucp.parm.GAdC  GAdC
    String
    Group address code.

ucp.parm.HPLMN  HPLMN
    String
    Home PLMN address.

ucp.parm.IVR5x  IVR5x
    String
    UCP release number supported/accepted.

ucp.parm.L1P  L1P
    String
    New leg. code for level 1 priority.

ucp.parm.L1R  L1R
    Unsigned 8-bit integer
    Leg. code for priority 1 flag.

ucp.parm.L3P  L3P
    String
    New leg. code for level 3 priority.

ucp.parm.L3R  L3R
    Unsigned 8-bit integer
    Leg. code for priority 3 flag.

ucp.parm.LAC  LAC
    String
    New leg. code for all calls.

ucp.parm.LAR  LAR
    Unsigned 8-bit integer
    Leg. code for all calls flag.

ucp.parm.LAdC  LAdC
    String
    Address for VSMSC list operation.

ucp.parm.LCR  LCR
    Unsigned 8-bit integer
    Leg. code for reverse charging flag.

ucp.parm.LMN  LMN
    Unsigned 8-bit integer
    Last message number.

ucp.parm.LNPI  LNPI
    Unsigned 8-bit integer
    Numbering plan id. list address.
```

ucp.parm.LNo LNo  
String  
Standard text list number requested by calling party.

ucp.parm.LPID LPID  
Unsigned 16-bit integer  
Last resort PID value.

ucp.parm.LPR LPR  
String  
Legitimation code for priority requested.

ucp.parm.LRAd LRAd  
String  
Last resort address.

ucp.parm.LRC LRC  
String  
Legitimation code for reverse charging.

ucp.parm.LRP LRP  
String  
Legitimation code for repetition.

ucp.parm.LRR LRR  
Unsigned 8-bit integer  
Leg. code for repetition flag.

ucp.parm.LRq LRq  
Unsigned 8-bit integer  
Last resort address request.

ucp.parm.LST LST  
String  
Legitimation code for standard text.

ucp.parm.LTON LTON  
Unsigned 8-bit integer  
Type of number list address.

ucp.parm.LUM LUM  
String  
Legitimation code for urgent message.

ucp.parm.LUR LUR  
Unsigned 8-bit integer  
Leg. code for urgent message flag.

ucp.parm.MCLs MCLs  
Unsigned 8-bit integer  
Message class.

ucp.parm.MMS MMS  
Unsigned 8-bit integer  
More messages to send.

ucp.parm.MNo MNo  
String  
Message number.

ucp.parm.MT MT  
Unsigned 8-bit integer  
Message type.

```
ucp.parm.MVP MVP
    Date/Time stamp
    Modified validity period.
ucp.parm.NAC NAC
    String
    New authentication code.
ucp.parm.NAdC NAdC
    String
    Notification address.
ucp.parm.NB NB
    String
    No. of bits in Transparent Data (TD) message.
ucp.parm.NMESS NMESS
    Unsigned 8-bit integer
    Number of stored messages.
ucp.parm.NMESS_str NMESS_str
    String
    Number of stored messages.
ucp.parm.NPID NPID
    Unsigned 16-bit integer
    Notification PID value.
ucp.parm.NPL NPL
    Unsigned 16-bit integer
    Number of parameters in the following list.
ucp.parm.NPWD NPWD
    String
    New password.
ucp.parm.NRq NRq
    Unsigned 8-bit integer
    Notification request.
ucp.parm.NT NT
    Unsigned 8-bit integer
    Notification type.
ucp.parm.NoA NoA
    Unsigned 16-bit integer
    Maximum number of alphanumerical characters accepted.
ucp.parm.NoB NoB
    Unsigned 16-bit integer
    Maximum number of data bits accepted.
ucp.parm.NoN NoN
    Unsigned 16-bit integer
    Maximum number of numerical characters accepted.
ucp.parm.OAC OAC
    String
    Authentication code, originator.
ucp.parm.OAdC OAdC
    String
    Address code originator.
```

```
ucp.parm.ONPI  ONPI
    Unsigned 8-bit integer
    Originator numbering plan id.

ucp.parm.OPID  OPID
    Unsigned 8-bit integer
    Originator protocol identifier.

ucp.parm.OTOA  OTOA
    String
    Originator Type Of Address.

ucp.parm.OTON  OTON
    Unsigned 8-bit integer
    Originator type of number.

ucp.parm.PID  PID
    Unsigned 16-bit integer
    SMT PID value.

ucp.parm.PNC  PNC
    Unsigned 8-bit integer
    Paging network controller.

ucp.parm.PR  PR
    Unsigned 8-bit integer
    Priority requested.

ucp.parm.PWD  PWD
    String
    Current password.

ucp.parm.RC  RC
    Unsigned 8-bit integer
    Reverse charging request.

ucp.parm.REQ_OT  REQ_OT
    Unsigned 8-bit integer
    UCP release number supported/accepted.

ucp.parm.RES1  RES1
    String
    Reserved for future use.

ucp.parm.RES2  RES2
    String
    Reserved for future use.

ucp.parm.RES4  RES4
    String
    Reserved for future use.

ucp.parm.RES5  RES5
    String
    Reserved for future use.

ucp.parm.RP  RP
    Unsigned 8-bit integer
    Repitition requested.

ucp.parm.RPI  RPI
    Unsigned 8-bit integer
    Reply path.
```

ucp.parm.RPID RPID  
String  
Replace PID

ucp.parm.RPLy RPLy  
String  
Reserved for Reply type.

ucp.parm.RT RT  
Unsigned 8-bit integer  
Receiver type.

ucp.parm.R\_T R\_T  
Unsigned 8-bit integer  
Message number.

ucp.parm.Rsn Rsn  
Unsigned 16-bit integer  
Reason code.

ucp.parm.SCTS SCTS  
Date/Time stamp  
Service Centre timestamp.

ucp.parm.SM SM  
String  
System message.

ucp.parm.SP SP  
Date/Time stamp  
Stop time.

ucp.parm.SSTAT SSTAT  
Unsigned 8-bit integer  
Supplementary services for which status is requested.

ucp.parm.ST ST  
Date/Time stamp  
Start time.

ucp.parm.STYP0 STYP0  
Unsigned 8-bit integer  
Subtype of operation.

ucp.parm.STYP1 STYP1  
Unsigned 8-bit integer  
Subtype of operation.

ucp.parm.STx STx  
No value  
Standard text.

ucp.parm.TNo TNo  
String  
Standard text number requested by calling party.

ucp.parm.UM UM  
Unsigned 8-bit integer  
Urgent message indicator.

ucp.parm.VERS VERS  
String  
Version number.

```
ucp.parm.VP  VP
             Date/Time stamp
             Validity period.

ucp.parm.XSer  Extra services:
             No value
             Extra services.

ucp.xser.service  Type of service
                 Unsigned 8-bit integer
                 The type of service specified.
```

#### Unlicensed Mobile Access (uma)

```
uma.ciphering_command_mac  Ciphering Command MAC (Message Authentication Code)
                           Byte array
                           Ciphering Command MAC (Message Authentication Code)

uma.ciphering_key_seq_num  Values for the ciphering key
                           Unsigned 8-bit integer
                           Values for the ciphering key

uma.li  Length Indicator
        Unsigned 16-bit integer
        Length Indicator

uma.pd  Protocol Discriminator
        Unsigned 8-bit integer
        Protocol Discriminator

uma.rand_val  Ciphering Command RAND value
              Byte array
              Ciphering Command RAND value

            Unsigned 8-bit integer
            Cipher Response(CR)
```

```
uma.urr.ECMP  ECMP, Emergency Call Mode Preference
    Unsigned 8-bit integer
    ECMP, Emergency Call Mode Preference

uma.urr.GPRS_resumption  GPRS resumption ACK
    Unsigned 8-bit integer
    GPRS resumption ACK

uma.urr.L3_protocol_discriminator  Protocol discriminator
    Unsigned 8-bit integer
    Protocol discriminator

uma.urr.LBLI  LBLI, Location Black List indicator
    Unsigned 8-bit integer
    LBLI, Location Black List indicator

uma.urr.LS  Location Status(LS)
    Unsigned 8-bit integer
    Location Status(LS)

uma.urr.NMO  NMO, Network Mode of Operation
    Unsigned 8-bit integer
    NMO, Network Mode of Operation

uma.urr.PDU_in_error  PDU in Error,
    Byte array
    PDU in Error,

uma.urr.PFCFM  PFCFM, PFC_FEATURE_MODE
    Unsigned 8-bit integer
    PFCFM, PFC_FEATURE_MODE

uma.urr.RE  RE, Call reestablishment allowed
    Unsigned 8-bit integer
    RE, Call reestablishment allowed

uma.urr.RI  Reset Indicator(RI)
    Unsigned 8-bit integer
    Reset Indicator(RI)

uma.urr.SC  SC
    Unsigned 8-bit integer
    SC

uma.urr.SGSNR  SGSN Release
    Unsigned 8-bit integer
    SGSN Release

uma.urr.ULQI  ULQI, UL Quality Indication
    Unsigned 8-bit integer
    ULQI, UL Quality Indication

uma.urr.URLCcause  URLC Cause
    Unsigned 8-bit integer
    URLC Cause

uma.urr.algorithm_identifier  Algorithm identifier
    Unsigned 8-bit integer
    Algorithm_identifier

uma.urr.ap_location  AP Location
    Byte array
    AP Location
```

```
uma.urr.ap_service_name_type  AP Service Name type
    Unsigned 8-bit integer
    AP Service Name type

uma.urr.ap_service_name_value  AP Service Name Value
    String
    AP Service Name Value

uma.urr.att  ATT, Attach-detach allowed
    Unsigned 8-bit integer
    ATT, Attach-detach allowed

uma.urr.bcc  BCC
    Unsigned 8-bit integer
    BCC

uma.urr.cbs  CBS Cell Broadcast Service
    Unsigned 8-bit integer
    CBS Cell Broadcast Service

uma.urr.cell_id  Cell Identity
    Unsigned 16-bit integer
    Cell Identity

uma.urr.communication_port  Communication Port
    Unsigned 16-bit integer
    Communication Portt

uma.urr.dtm  DTM, Dual Transfer Mode of Operation by network
    Unsigned 8-bit integer
    DTM, Dual Transfer Mode of Operation by network

uma.urr.establishment_cause  Establishment Cause
    Unsigned 8-bit integer
    Establishment Cause

uma.urr.fqdn  Fully Qualified Domain/Host Name (FQDN)
    String
    Fully Qualified Domain/Host Name (FQDN)

uma.urr.gc  GC, GERAN Capable
    Unsigned 8-bit integer
    GC, GERAN Capable

uma.urr.gci  GCI, GSM Coverage Indicator
    Unsigned 8-bit integer
    GCI, GSM Coverage Indicator

uma.urr.gprs_port  UDP Port for GPRS user data transport
    Unsigned 16-bit integer
    UDP Port for GPRS user data transport

uma.urr.gprs_usr_data_ipv4  IP address for GPRS user data transport
    IPv4 address
    IP address for GPRS user data transport

uma.urr.gsmrrstate  GSM RR State value
    Unsigned 8-bit integer
    GSM RR State value

uma.urr.ie.len  URR Information Element length
    Unsigned 16-bit integer
    URR Information Element length
```

```
uma.urr.ie.mobileid.type  Mobile Identity Type
    Unsigned 8-bit integer
    Mobile Identity Type

uma.urr.ie.type  URR Information Element
    Unsigned 8-bit integer
    URR Information Element

uma.urr.ip_type  IP address type number value
    Unsigned 8-bit integer
    IP address type number value

uma.urr.is_rej_cau  Discovery Reject Cause
    Unsigned 8-bit integer
    Discovery Reject Cause

uma.urr.l3  L3 message contents
    Byte array
    L3 message contents

uma.urr.lac  Location area code
    Unsigned 16-bit integer
    Location area code

uma.urr.llc_pdu  LLC-PDU
    Byte array
    LLC-PDU

uma.urr.mcc  Mobile Country Code
    Unsigned 16-bit integer
    Mobile Country Code

uma.urr.mnc  Mobile network code
    Unsigned 16-bit integer
    Mobile network code

uma.urr.mps  UMPS, Manual PLMN Selection indicator
    Unsigned 8-bit integer
    MPS, Manual PLMN Selection indicator

uma.urr.ms_radio_id  MS Radio Identity
    6-byte Hardware (MAC) Address
    MS Radio Identity

uma.urr.msqr  MSCR, MSC Release
    Unsigned 8-bit integer
    MSCR, MSC Release

uma.urr.msg.type  URR Message Type
    Unsigned 16-bit integer
    URR Message Type

uma.urr.ncc  NCC
    Unsigned 8-bit integer
    NCC

uma.urr.num_of_cbs_frms  Number of CBS Frames
    Unsigned 8-bit integer
    Number of CBS Frames

uma.urr.num_of_plms  Number of PLMN:s
    Unsigned 8-bit integer
    Number of PLMN:s
```

```
uma.urr.oddevenind  Odd/even indication
    Unsigned 8-bit integer
    Mobile Identity

uma.urr.peak_tpt_cls  PEAK_THROUGHPUT_CLASS
    Unsigned 8-bit integer
    PEAK_THROUGHPUT_CLASS

uma.urr.rac  Routing Area Code
    Unsigned 8-bit integer
    Routing Area Code

uma.urr.radio_id  Radio Identity
    6-byte Hardware (MAC) Address
    Radio Identity

uma.urr.radio_pri  Radio Priority
    Unsigned 8-bit integer
    RADIO_PRIORITY

uma.urr.radio_type_of_id  Type of identity
    Unsigned 8-bit integer
    Type of identity

uma.urr.redirection_counter  Redirection Counter
    Unsigned 8-bit integer
    Redirection Counter

uma.urr.rrlc_mode  RLC mode
    Unsigned 8-bit integer
    RLC mode

uma.urr.rrs  RTP Redundancy Support(RRS)
    Unsigned 8-bit integer
    RTP Redundancy Support(RRS)

uma.urr.rtcp_port  RTCP UDP port
    Unsigned 16-bit integer
    RTCP UDP port

uma.urr.rtp_port  RTP UDP port
    Unsigned 16-bit integer
    RTP UDP port

uma.urr.rxlevel  RX Level
    Unsigned 8-bit integer
    RX Level

uma.urr.sample_size  Sample Size
    Unsigned 8-bit integer
    Sample Size

uma.urr.service_zone_str_len  Length of UMA Service Zone string
    Unsigned 8-bit integer
    Length of UMA Service Zone string

uma.urr.sgwipv4  SGW IPv4 address
    IPv4 address
    SGW IPv4 address

uma.urr.state  URR State
    Unsigned 8-bit integer
    URR State
```

```
uma.urr.t3212  T3212 Timer value(seconds)
  Unsigned 8-bit integer
  T3212 Timer value(seconds)

uma.urr.tu3902  TU3902 Timer value(seconds)
  Unsigned 16-bit integer
  TU3902 Timer value(seconds)

uma.urr.tu3906  TU3907 Timer value(seconds)
  Unsigned 16-bit integer
  TU3906 Timer value(seconds)

uma.urr.tu3907  TU3907 Timer value(seconds)
  Unsigned 16-bit integer
  TU3907 Timer value(seconds)

uma.urr.tu3910  TU3907 Timer value(seconds)
  Unsigned 16-bit integer
  TU3910 Timer value(seconds)

uma.urr.tu3920  TU3920 Timer value(seconds)
  Unsigned 16-bit integer
  TU3920 Timer value(hundreds of of ms)

uma.urr.tu4001  TU4001 Timer value(seconds)
  Unsigned 16-bit integer
  TU4001 Timer value(seconds)

uma.urr.tu4003  TU4003 Timer value(seconds)
  Unsigned 16-bit integer
  TU4003 Timer value(seconds)

uma.urr.tura   TURA, Type of Unlicensed Radio
  Unsigned 8-bit integer
  TURA, Type of Unlicensed Radio

uma.urr.uc    UC, UTRAN Capable
  Unsigned 8-bit integer
  GC, GERAN Capable

uma.urr.uma_UTRAN_cell_id_disc  UTRAN Cell Identification Discriminator
  Unsigned 8-bit integer
  UTRAN Cell Identification Discriminator

uma.urr.uma_codec_mode  Codec Mode
  Unsigned 8-bit integer
  Codec Mode

uma.urr.uma_service_zone_icon_ind  UMA Service Zone Icon Indicator
  Unsigned 8-bit integer
  UMA Service Zone Icon Indicator

uma.urr.uma_service_zone_str  UMA Service Zone string,
  String
  UMA Service Zone string,

uma.urr.uma_suti  SUTI, Serving UNC table indicator indicator
  Unsigned 8-bit integer
  SUTI, Serving UNC table indicator indicator

uma.urr.uma_window_size  Window Size
  Unsigned 8-bit integer
  Window Size
```

```

uma.urr.umaband  UMA Band
    Unsigned 8-bit integer
    UMA Band

uma.urr.unc_fqdn  UNC Fully Qualified Domain/Host Name (FQDN)
    String
    UNC Fully Qualified Domain/Host Name (FQDN)

uma.urr.uncipv4  UNC IPv4 address
    IPv4 address
    UNC IPv4 address

uma.urr.uri      UMA Release Indicator (URI)
    Unsigned 8-bit integer
    URI

uma_urr.imei     IMEI
    String
    IMEI

uma_urr.imeisv   IMEISV
    String
    IMEISV

uma_urr.imsi     IMSI
    String
    IMSI

uma_urr.tmsi_p_tmsi  TMSI/P-TMSI
    String
    TMSI/P-TMSI

```

### Unreassembled Fragmented Packet (unreassembled)

#### User Datagram Protocol (udp)

```

udp.checksum     Checksum
    Unsigned 16-bit integer
    Details at: http://www.wireshark.org/docs/wsug\_html\_chunked/ChAdvChecksums.h

udp.checksum_bad  Bad Checksum
    Boolean
    True: checksum doesn't match packet content; False: matches content or not c

udp.checksum_good  Good Checksum
    Boolean
    True: checksum matches packet content; False: doesn't match content or not c

udp.dstport      Destination Port
    Unsigned 16-bit integer

udp.length       Length
    Unsigned 16-bit integer

udp.port         Source or Destination Port
    Unsigned 16-bit integer

udp.srcport      Source Port
    Unsigned 16-bit integer

```

**V5.2–User Adaptation Layer (v5ua)**

v5ua.adaptation\_layer\_id Adaptation Layer ID  
String

v5ua.asp\_reason Reason  
Unsigned 32-bit integer

v5ua.channel\_id Channel Identifier  
Unsigned 8-bit integer

v5ua.diagnostic\_info Diagnostic Information  
Byte array

v5ua.dlci\_one\_bit One bit  
Boolean

v5ua.dlci\_sapi SAPI  
Unsigned 8-bit integer

v5ua.dlci\_spare\_bit Spare bit  
Boolean

v5ua.dlci\_tei TEI  
Unsigned 8-bit integer

v5ua.dlci\_zero\_bit Zero bit  
Boolean

v5ua.draft\_error\_code Error code (draft)  
Unsigned 32-bit integer

v5ua.efa Envelope Function Address  
Unsigned 16-bit integer

v5ua.error\_code Error code  
Unsigned 32-bit integer

v5ua.error\_reason Error Reason  
Unsigned 32-bit integer

v5ua.heartbeat\_data Heartbeat data  
Byte array

v5ua.info\_string Info String  
String

v5ua.interface\_range\_end Interface range End  
Unsigned 32-bit integer

v5ua.interface\_range\_start Interface range Start  
Unsigned 32-bit integer

v5ua.l3\_ack\_request\_indicator Ack request indicator  
Unsigned 8-bit integer

v5ua.l3\_address Layer3 address  
Unsigned 8-bit integer

v5ua.l3\_auto\_signalling\_sequence Autonomous signalling sequence  
Unsigned 8-bit integer

v5ua.l3\_bcc\_protocol\_cause BCC Protocol error cause type  
Unsigned 8-bit integer

v5ua.l3\_cad\_ringing Cadenced ringing type  
Unsigned 8-bit integer

```
v5ua.l3_cause_type Cause type
    Unsigned 8-bit integer
v5ua.l3_connection_incomplete_reason Reason
    Unsigned 8-bit integer
v5ua.l3_control_function Control function ID
    Unsigned 8-bit integer
v5ua.l3_control_function_element Control function element
    Unsigned 8-bit integer
v5ua.l3_cp_rejection_cause Rejection cause
    Unsigned 8-bit integer
v5ua.l3_digit_ack Digit ack request indication
    Unsigned 8-bit integer
v5ua.l3_digit_info Digit information
    Unsigned 8-bit integer
v5ua.l3_duration_type Duration Type
    Unsigned 8-bit integer
v5ua.l3_info_element Layer3 information element
    Unsigned 8-bit integer
v5ua.l3_interface_id Interface ID
    Unsigned 32-bit integer
v5ua.l3_isdn_user_port_id ISDN User Port Identification Value
    Unsigned 8-bit integer
v5ua.l3_isdn_user_port_ts_num ISDN user port time slot number
    Unsigned 8-bit integer
v5ua.l3_line_info Line_Information
    Unsigned 8-bit integer
v5ua.l3_link_control_function Link control function
    Unsigned 8-bit integer
v5ua.l3_link_id V5 2048 kbit/s Link Identifier
    Unsigned 8-bit integer
v5ua.l3_low_address Layer3 low address
    Unsigned 8-bit integer
v5ua.l3_msg_type Layer3 message type
    Unsigned 8-bit integer
v5ua.l3_number_of_pulses Number of pulses
    Unsigned 8-bit integer
v5ua.l3_override Override
    Boolean
v5ua.l3_performance_grading Performance grading
    Unsigned 8-bit integer
v5ua.l3_protocol_disc Protocol Discriminator
    Unsigned 8-bit integer
v5ua.l3_pstn_sequence_number Sequence number
    Unsigned 8-bit integer
```

```
v5ua.l3_pstn_user_port_id  PSTN User Port identification Value
    Unsigned 8-bit integer
v5ua.l3_pstn_user_port_id_lower  PSTN User Port Identification Value (lower)
    Unsigned 8-bit integer
v5ua.l3_pulse_duration  Pulse duration type
    Unsigned 8-bit integer
v5ua.l3_pulse_notification  Pulse notification
    Unsigned 8-bit integer
v5ua.l3_pulse_type  Pulse Type
    Unsigned 8-bit integer
v5ua.l3_reject_cause_type  Reject cause type
    Unsigned 8-bit integer
v5ua.l3_res_unavailable  Resource unavailable
    String
v5ua.l3_sequence_number  Sequence number
    Unsigned 8-bit integer
v5ua.l3_sequence_response  Sequence response
    Unsigned 8-bit integer
v5ua.l3_state  PSTN FSM state
    Unsigned 8-bit integer
v5ua.l3_steady_signal  Steady Signal
    Unsigned 8-bit integer
v5ua.l3_suppression_indicator  Suppression indicator
    Unsigned 8-bit integer
v5ua.l3_user_port_id_lower  ISDN User Port Identification Value (lower)
    Unsigned 8-bit integer
v5ua.l3_v5_time_slot  V5 Time Slot Number
    Unsigned 8-bit integer
v5ua.l3_variant  Variant
    Unsigned 8-bit integer
v5ua.link_id  Link Identifier
    Unsigned 32-bit integer
v5ua.link_status  Link Status
    Unsigned 32-bit integer
v5ua.msg_class  Message class
    Unsigned 8-bit integer
v5ua.msg_length  Message length
    Unsigned 32-bit integer
v5ua.msg_type  Message Type
    Unsigned 8-bit integer
v5ua.msg_type_id  Message Type ID
    Unsigned 8-bit integer
v5ua.parameter_length  Parameter length
    Unsigned 16-bit integer
```

```
v5ua.parameter_padding  Parameter padding
    Byte array
v5ua.parameter_tag      Parameter Tag
    Unsigned 16-bit integer
v5ua.parameter_value    Parameter value
    Byte array
v5ua.release_reason     Release Reason
    Unsigned 32-bit integer
v5ua.reserved           Reserved
    Unsigned 8-bit integer
v5ua.sa_bit_id          BIT ID
    Unsigned 16-bit integer
v5ua.sa_bit_value       Bit Value
    Unsigned 16-bit integer
v5ua.scn_protocol_id    SCN Protocol Identifier
    String
v5ua.status_id          Status identification
    Unsigned 16-bit integer
v5ua.status_type        Status type
    Unsigned 16-bit integer
v5ua.tei_draft_status   TEI status
    Unsigned 32-bit integer
v5ua.tei_status         TEI status
    Unsigned 32-bit integer
v5ua.text_interface_id  Text interface identifier
    String
v5ua.traffic_mode_type  Traffic mode type
    Unsigned 32-bit integer
v5ua.version            Version
    Unsigned 8-bit integer
```

**Veritas Low Latency Transport (LLT) (llt)**

```
llt.cluster_num         Cluster number
    Unsigned 8-bit integer
    Cluster number that this node belongs to
llt.message_time        Message time
    Unsigned 32-bit integer
    Number of ticks since this node was last rebooted
llt.message_type        Message type
    Unsigned 8-bit integer
    Type of LLT message contained in this frame
llt.node_id             Node ID
    Unsigned 8-bit integer
    Number identifying this node within the cluster
```

llt.sequence\_num Sequence number  
Unsigned 32-bit integer  
Sequence number of this frame

### Virtual Network Computing (vnc)

vnc.auth\_challenge Authentication challenge  
String  
Random authentication challenge from server to client

vnc.auth\_error Authentication error  
String  
Authentication error (present only if the authentication result is fail)

vnc.auth\_response Authentication response  
String  
Client's encrypted response to the server's authentication challenge

vnc.auth\_result Authentication result  
Unsigned 32-bit integer  
Authentication result

vnc.button\_1\_pos Mouse button #1 position  
Unsigned 8-bit integer  
Whether mouse button #1 is being pressed or not

vnc.button\_2\_pos Mouse button #2 position  
Unsigned 8-bit integer  
Whether mouse button #2 is being pressed or not

vnc.button\_3\_pos Mouse button #3 position  
Unsigned 8-bit integer  
Whether mouse button #3 is being pressed or not

vnc.button\_4\_pos Mouse button #4 position  
Unsigned 8-bit integer  
Whether mouse button #4 is being pressed or not

vnc.button\_5\_pos Mouse button #5 position  
Unsigned 8-bit integer  
Whether mouse button #5 is being pressed or not

vnc.button\_6\_pos Mouse button #6 position  
Unsigned 8-bit integer  
Whether mouse button #6 is being pressed or not

vnc.button\_7\_pos Mouse button #7 position  
Unsigned 8-bit integer  
Whether mouse button #7 is being pressed or not

vnc.button\_8\_pos Mouse button #8 position  
Unsigned 8-bit integer  
Whether mouse button #8 is being pressed or not

vnc.client\_big\_endian\_flag Big endian flag  
Boolean  
True if multi-byte pixels are interpreted as big endian by client

vnc.client\_bits\_per\_pixel Bits per pixel  
Unsigned 8-bit integer  
Number of bits used by server for each pixel value on the wire from the client

vnc.client\_blue\_max Blue maximum  
Unsigned 16-bit integer  
Maximum blue value on client as  $n: 2^n - 1$

vnc.client\_blue\_shift Blue shift  
Unsigned 8-bit integer  
Number of shifts needed to get the blue value in a pixel to the least significant bit

vnc.client\_cut\_text Text  
String  
Text string in the client's copy/cut text (clipboard)

vnc.client\_cut\_text\_len Length  
Unsigned 32-bit integer  
Length of client's copy/cut text (clipboard) string in bytes

vnc.client\_depth Depth  
Unsigned 8-bit integer  
Number of useful bits in the pixel value on client

vnc.client\_green\_max Green maximum  
Unsigned 16-bit integer  
Maximum green value on client as  $n: 2^n - 1$

vnc.client\_green\_shift Green shift  
Unsigned 8-bit integer  
Number of shifts needed to get the green value in a pixel to the least significant bit

vnc.client\_message\_type Client Message Type  
Unsigned 8-bit integer  
Message type from client

vnc.client\_proto\_ver Client protocol version  
String  
VNC protocol version on client

vnc.client\_red\_max Red maximum  
Unsigned 16-bit integer  
Maximum red value on client as  $n: 2^n - 1$

vnc.client\_red\_shift Red shift  
Unsigned 8-bit integer  
Number of shifts needed to get the red value in a pixel to the least significant bit

vnc.client\_set\_encodings\_encoding\_type Encoding type  
Signed 32-bit integer  
Type of encoding used to send pixel data from server to client

vnc.client\_true\_color\_flag True color flag  
Boolean  
If true, then the next six items specify how to extract the red, green and blue values from a pixel

vnc.colormap\_blue Blue  
Unsigned 16-bit integer  
Blue intensity

vnc.colormap\_first\_color First color  
Unsigned 16-bit integer  
First color that should be mapped to given RGB intensities

vnc.colormap\_green Green  
Unsigned 16-bit integer  
Green intensity

vnc.colormap\_groups Number of color groups  
Unsigned 16-bit integer  
Number of red/green/blue color groups

vnc.colormap\_red Red  
Unsigned 16-bit integer  
Red intensity

vnc.copyrect\_src\_x\_pos Source x position  
Unsigned 16-bit integer  
X position of the rectangle to copy from

vnc.copyrect\_src\_y\_pos Source y position  
Unsigned 16-bit integer  
Y position of the rectangle to copy from

vnc.cursor\_encoding\_bitmask Cursor encoding bitmask  
Byte array  
Cursor encoding pixel bitmask

vnc.cursor\_encoding\_pixels Cursor encoding pixels  
Byte array  
Cursor encoding pixel data

vnc.desktop\_name Desktop name  
String  
Name of the VNC desktop on the server

vnc.desktop\_name\_len Desktop name length  
Unsigned 32-bit integer  
Length of desktop name in bytes

vnc.fb\_update\_encoding\_type Encoding type  
Signed 32-bit integer  
Encoding type of this server framebuffer update

vnc.fb\_update\_width Width  
Unsigned 16-bit integer  
Width of this server framebuffer update

vnc.fb\_update\_x\_pos X position  
Unsigned 16-bit integer  
X position of this server framebuffer update

vnc.hextile\_anysubrects Any Subrects  
Unsigned 8-bit integer  
Any subrects subencoding is used in this tile

vnc.hextile\_bg Background Specified  
Unsigned 8-bit integer  
Background Specified subencoding is used in this tile

vnc.hextile\_bg\_value Background pixel value  
Byte array  
Background color for this tile

vnc.hextile\_fg Foreground Specified  
Unsigned 8-bit integer  
Foreground Specified subencoding is used in this tile

vnc.hextile\_fg\_value Foreground pixel value  
Byte array  
Foreground color for this tile

vnc.hextile\_num\_subrects Number of subrectangles  
Unsigned 8-bit integer  
Number of subrectangles that follow

vnc.hextile\_raw Raw  
Unsigned 8-bit integer  
Raw subencoding is used in this tile

vnc.hextile\_raw\_value Raw pixel values  
Byte array  
Raw subencoding pixel values

vnc.hextile\_subencoding Subencoding type  
Unsigned 8-bit integer  
Hextile subencoding type.

vnc.hextile\_subrect\_height Height  
Unsigned 8-bit integer  
Subrectangle height minus one

vnc.hextile\_subrect\_pixel\_value Pixel value  
Byte array  
Pixel value of this subrectangle

vnc.hextile\_subrect\_width Width  
Unsigned 8-bit integer  
Subrectangle width minus one

vnc.hextile\_subrect\_x\_pos X position  
Unsigned 8-bit integer  
X position of this subrectangle

vnc.hextile\_subrect\_y\_pos Y position  
Unsigned 8-bit integer  
Y position of this subrectangle

vnc.hextile\_subrectscolored Subrects Colored  
Unsigned 8-bit integer  
Subrects colored subencoding is used in this tile

vnc.key Key  
Unsigned 32-bit integer  
Key being pressed/depressed

vnc.key\_down Key down  
Unsigned 8-bit integer  
Specifies whether the key is being pressed or not

vnc.num\_client\_message\_types Client message types  
Unsigned 16-bit integer  
Unknown

vnc.num\_encoding\_types Encoding types  
Unsigned 16-bit integer  
Unknown

vnc.num\_security\_types Number of security types  
Unsigned 8-bit integer  
Number of security (authentication) types supported by the server

vnc.num\_server\_message\_types Server message types  
Unsigned 16-bit integer  
Unknown

vnc.padding Padding  
No value  
Unused space

vnc.pointer\_x\_pos X position  
Unsigned 16-bit integer  
Position of mouse cursor on the x-axis

vnc.pointer\_y\_pos Y position  
Unsigned 16-bit integer  
Position of mouse cursor on the y-axis

vnc.raw\_pixel\_data Pixel data  
Byte array  
Raw pixel data.

vnc.rre\_bg\_pixel Background pixel value  
Byte array  
Background pixel value

vnc.rre\_num\_subrects Number of subrectangles  
Unsigned 32-bit integer  
Number of subrectangles contained in this encoding type

vnc.rre\_subrect\_height Height  
Unsigned 16-bit integer  
Height of this subrectangle

vnc.rre\_subrect\_pixel Pixel value  
Byte array  
Subrectangle pixel value

vnc.rre\_subrect\_width Width  
Unsigned 16-bit integer  
Width of this subrectangle

vnc.rre\_subrect\_x\_pos X position  
Unsigned 16-bit integer  
Position of this subrectangle on the x axis

vnc.rre\_subrect\_y\_pos Y position  
Unsigned 16-bit integer  
Position of this subrectangle on the y axis

vnc.security\_type Security type  
Unsigned 8-bit integer  
Security types offered by the server (VNC versions => 3.007)

vnc.security\_type\_string Security type string  
String  
Security type being used

vnc.server\_big\_endian\_flag Big endian flag  
Boolean  
True if multi-byte pixels are interpreted as big endian by server

vnc.server\_bits\_per\_pixel Bits per pixel  
Unsigned 8-bit integer  
Number of bits used by server for each pixel value on the wire from the server

vnc.server\_blue\_max Blue maximum  
Unsigned 16-bit integer  
Maximum blue value on server as  $n: 2^n - 1$

vnc.server\_blue\_shift Blue shift  
Unsigned 8-bit integer  
Number of shifts needed to get the blue value in a pixel to the least significant bit

vnc.server\_cut\_text Text  
String  
Text string in the server's copy/cut text (clipboard)

vnc.server\_cut\_text\_len Length  
Unsigned 32-bit integer  
Length of server's copy/cut text (clipboard) string in bytes

vnc.server\_depth Depth  
Unsigned 8-bit integer  
Number of useful bits in the pixel value on server

vnc.server\_green\_max Green maximum  
Unsigned 16-bit integer  
Maximum green value on server as  $n: 2^n - 1$

vnc.server\_green\_shift Green shift  
Unsigned 8-bit integer  
Number of shifts needed to get the green value in a pixel to the least significant bit

vnc.server\_message\_type Server Message Type  
Unsigned 8-bit integer  
Message type from server

vnc.server\_proto\_ver Server protocol version  
String  
VNC protocol version on server

vnc.server\_red\_max Red maximum  
Unsigned 16-bit integer  
Maximum red value on server as  $n: 2^n - 1$

vnc.server\_red\_shift Red shift  
Unsigned 8-bit integer  
Number of shifts needed to get the red value in a pixel to the least significant bit

vnc.server\_security\_type Security type  
Unsigned 32-bit integer  
Security type mandated by the server

vnc.server\_true\_color\_flag True color flag  
Boolean  
If true, then the next six items specify how to extract the red, green and blue values from a pixel

vnc.share\_desktop\_flag Share desktop flag  
Unsigned 8-bit integer  
Client's desire to share the server's desktop with other clients

vnc.update\_req\_height Height  
Unsigned 16-bit integer  
Height of framebuffer (screen) update request

vnc.update\_req\_incremental Incremental update  
Boolean  
Specifies if the client wants an incremental update instead of a full one

vnc.update\_req\_width Width  
Unsigned 16-bit integer  
Width of framebuffer (screen) update request

vnc.update\_req\_x\_pos X position  
Unsigned 16-bit integer  
X position of framebuffer (screen) update requested

vnc.update\_req\_y\_pos Y position  
Unsigned 16-bit integer  
Y position of framebuffer (screen) update request

vnc.vendor\_code Vendor code  
String  
Identifies the VNC server software's vendor

vnc.width Framebuffer width  
Unsigned 16-bit integer  
Width of the framebuffer (screen) in pixels

vnc.zrle\_data ZRLE compressed data  
Byte array  
Compressed ZRLE data. Compiling with zlib support will uncompress and disse

vnc.zrle\_len ZRLE compressed length  
Unsigned 32-bit integer  
Length of compressed ZRLE data that follows

vnc.zrle\_palette Palette  
Byte array  
Palette pixel values

vnc.zrle\_palette\_size Palette size  
Unsigned 8-bit integer  
Palette size

vnc.zrle\_raw Pixel values  
Byte array  
Raw pixel values for this tile

vnc.zrle\_rle RLE  
Unsigned 8-bit integer  
Specifies that data is run-length encoded

vnc.zrle\_subencoding Subencoding type  
Unsigned 8-bit integer  
Subencoding type byte

#### **Virtual Router Redundancy Protocol (vrrp)**

vrrp.adver\_int Adver Int  
Unsigned 8-bit integer  
Time interval (in seconds) between ADVERTISEMENTS

vrrp.auth\_type Auth Type  
Unsigned 8-bit integer  
The authentication method being utilized

vrrp.count\_ip\_addrs Count IP Addrs  
Unsigned 8-bit integer  
The number of IP addresses contained in this VRRP advertisement

vrrp.ip\_addr IP Address  
IPv4 address  
IP address associated with the virtual router

vrrp.ipv6\_addr IPv6 Address  
IPv6 address  
IPv6 address associated with the virtual router

vrrp.prio Priority  
Unsigned 8-bit integer  
Sending VRRP router's priority for the virtual router

vrrp.type VRRP packet type  
Unsigned 8-bit integer  
VRRP type

vrrp.typever VRRP message version and type  
Unsigned 8-bit integer  
VRRP version and type

vrrp.version VRRP protocol version  
Unsigned 8-bit integer  
VRRP version

vrrp.virt\_rtr\_id Virtual Rtr ID  
Unsigned 8-bit integer  
Virtual router this packet is reporting status for

#### Virtual Trunking Protocol (vtp)

vtp.code Code  
Unsigned 8-bit integer

vtp.conf\_rev\_num Configuration Revision Number  
Unsigned 32-bit integer  
Revision number of the configuration information

vtp.followers Followers  
Unsigned 8-bit integer  
Number of following Subset-Advert messages

vtp.md Management Domain  
String  
Management domain

vtp.md5\_digest MD5 Digest  
Byte array

vtp.md\_len Management Domain Length  
Unsigned 8-bit integer  
Length of management domain string

vtp.seq\_num Sequence Number  
Unsigned 8-bit integer  
Order of this frame in the sequence of Subset-Advert frames

vtp.start\_value Start Value  
Unsigned 16-bit integer  
Virtual LAN ID of first VLAN for which information is requested

vtp.upd\_id Updater Identity  
IPv4 address  
IP address of the updater

vtp.upd\_ts Update Timestamp  
String  
Time stamp of the current configuration revision

```
vtp.version Version
  Unsigned 8-bit integer

vtp.vlan_info.802_10_index 802.10 Index
  Unsigned 32-bit integer
  IEEE 802.10 security association identifier for this VLAN

vtp.vlan_info.isl_vlan_id ISL VLAN ID
  Unsigned 16-bit integer
  ID of this VLAN on ISL trunks

vtp.vlan_info.len VLAN Information Length
  Unsigned 8-bit integer
  Length of the VLAN information field

vtp.vlan_info.mtu_size MTU Size
  Unsigned 16-bit integer
  MTU for this VLAN

vtp.vlan_info.status.vlan_susp VLAN suspended
  Boolean
  VLAN suspended

vtp.vlan_info.tlv_len Length
  Unsigned 8-bit integer

vtp.vlan_info.tlv_type Type
  Unsigned 8-bit integer

vtp.vlan_info.vlan_name VLAN Name
  String
  VLAN name

vtp.vlan_info.vlan_name_len VLAN Name Length
  Unsigned 8-bit integer
  Length of VLAN name string

vtp.vlan_info.vlan_type VLAN Type
  Unsigned 8-bit integer
  Type of VLAN
```

**WAP Binary XML (wbxml)**

```
wbxml.charset Character Set
  Unsigned 32-bit integer
  WBXML Character Set

wbxml.public_id.known Public Identifier (known)
  Unsigned 32-bit integer
  WBXML Known Public Identifier (integer)

wbxml.public_id.literal Public Identifier (literal)
  String
  WBXML Literal Public Identifier (text string)

wbxml.version Version
  Unsigned 8-bit integer
  WBXML Version
```

**WAP Session Initiation Request (wap-sir)**

```
wap.sir    Session Initiation Request
           No value
           Session Initiation Request content

wap.sir.app_id_list  Application-ID List
           No value
           Application-ID list

wap.sir.app_id_list.length  Application-ID List Length
           Unsigned 32-bit integer
           Length of the Application-ID list (bytes)

wap.sir.contact_points  Non-WSP Contact Points
           No value
           Non-WSP Contact Points list

wap.sir.contact_points.length  Non-WSP Contact Points Length
           Unsigned 32-bit integer
           Length of the Non-WSP Contact Points list (bytes)

wap.sir.cpi_tag    CPITag
           Byte array
           CPITag (OTA-HTTP)

wap.sir.cpi_tag.length  CPITag List Entries
           Unsigned 32-bit integer
           Number of entries in the CPITag list

wap.sir.protocol_options  Protocol Options
           Unsigned 16-bit integer
           Protocol Options list

wap.sir.protocol_options.length  Protocol Options List Entries
           Unsigned 32-bit integer
           Number of entries in the Protocol Options list

wap.sir.prov_url    X-Wap-ProvURL
           String
           X-Wap-ProvURL (Identifies the WAP Client Provisioning Context)

wap.sir.prov_url.length  X-Wap-ProvURL Length
           Unsigned 32-bit integer
           Length of the X-Wap-ProvURL (Identifies the WAP Client Provisioning Context)

wap.sir.version    Version
           Unsigned 8-bit integer
           Version of the Session Initiation Request document

wap.sir.wsp_contact_points  WSP Contact Points
           No value
           WSP Contact Points list

wap.sir.wsp_contact_points.length  WSP Contact Points Length
           Unsigned 32-bit integer
           Length of the WSP Contact Points list (bytes)
```

**WINS (Windows Internet Name Service) Replication (winsrepl)**

```
winsrepl.assoc_ctx  Assoc_Ctx
    Unsigned 32-bit integer
    WINS Replication Assoc_Ctx

winsrepl.initiator  Initiator
    IPv4 address
    WINS Replication Initiator

winsrepl.ip_address  IP Address
    IPv4 address
    WINS Replication IP Address

winsrepl.ip_owner   IP Owner
    IPv4 address
    WINS Replication IP Owner

winsrepl.major_version  Major Version
    Unsigned 16-bit integer
    WINS Replication Major Version

winsrepl.max_version  Max Version
    Unsigned 64-bit integer
    WINS Replication Max Version

winsrepl.message_type  Message_Type
    Unsigned 32-bit integer
    WINS Replication Message_Type

winsrepl.min_version  Min Version
    Unsigned 64-bit integer
    WINS Replication Min Version

winsrepl.minor_version  Minor Version
    Unsigned 16-bit integer
    WINS Replication Minor Version

winsrepl.name_flags  Name Flags
    Unsigned 32-bit integer
    WINS Replication Name Flags

winsrepl.name_flags.hosttype  Host Type
    Unsigned 32-bit integer
    WINS Replication Name Flags Host Type

winsrepl.name_flags.local  Local
    Boolean
    WINS Replication Name Flags Local Flag

winsrepl.name_flags.recstate  Record State
    Unsigned 32-bit integer
    WINS Replication Name Flags Record State

winsrepl.name_flags.rectype  Record Type
    Unsigned 32-bit integer
    WINS Replication Name Flags Record Type

winsrepl.name_flags.static  Static
    Boolean
    WINS Replication Name Flags Static Flag
```

```
winsrepl.name_group_flag  Name Group Flag
    Unsigned 32-bit integer
    WINS Replication Name Group Flag

winsrepl.name_len        Name Len
    Unsigned 32-bit integer
    WINS Replication Name Len

winsrepl.name_version_id  Name Version Id
    Unsigned 64-bit integer
    WINS Replication Name Version Id

winsrepl.num_ips         Num IPs
    Unsigned 32-bit integer
    WINS Replication Num IPs

winsrepl.num_names       Num Names
    Unsigned 32-bit integer
    WINS Replication Num Names

winsrepl.opcode          Opcode
    Unsigned 32-bit integer
    WINS Replication Opcode

winsrepl.owner_address   Owner Address
    IPv4 address
    WINS Replication Owner Address

winsrepl.owner_type      Owner Type
    Unsigned 32-bit integer
    WINS Replication Owner Type

winsrepl.partner_count   Partner Count
    Unsigned 32-bit integer
    WINS Replication Partner Count

winsrepl.reason          Reason
    Unsigned 32-bit integer
    WINS Replication Reason

winsrepl.repl_cmd        Replication Command
    Unsigned 32-bit integer
    WINS Replication Command

winsrepl.size            Packet Size
    Unsigned 32-bit integer
    WINS Replication Packet Size

winsrepl.unknown         Unknown IP
    IPv4 address
    WINS Replication Unknown IP
```

**Wake On LAN (wol)**

```
wol.mac  MAC
    6-byte Hardware (MAC) Address

wol.passwd  Password
    Byte array

wol.sync  Sync stream
    Byte array
```

**Web Cache Coordination Protocol (wccp)**

wccp.cache\_ip Web Cache IP address  
IPv4 address  
The IP address of a Web cache

wccp.change\_num Change Number  
Unsigned 32-bit integer  
The Web-Cache list entry change number

wccp.hash\_revision Hash Revision  
Unsigned 32-bit integer  
The cache hash revision

wccp.message WCCP Message Type  
Unsigned 32-bit integer  
The WCCP message that was sent

wccp.recvd\_id Received ID  
Unsigned 32-bit integer  
The number of I\_SEE\_YOU's that have been sent

wccp.version WCCP Version  
Unsigned 32-bit integer  
The WCCP version

**WebSphere MQ (mq)**

mq.api.completioncode Completion code  
Unsigned 32-bit integer  
API Completion code

mq.api.hobj Object handle  
Unsigned 32-bit integer  
API Object handle

mq.api.reasoncode Reason code  
Unsigned 32-bit integer  
API Reason code

mq.api.replylength Reply length  
Unsigned 32-bit integer  
API Reply length

mq.conn.acttoken Accounting token  
Byte array  
CONN accounting token

mq.conn.appname Application name  
String  
CONN application name

mq.conn.apptype Application type  
Signed 32-bit integer  
CONN application type

mq.conn.options Options  
Unsigned 32-bit integer  
CONN options

mq.conn.qm Queue manager  
String  
CONN queue manager

```
mq.conn.version  Version
    Unsigned 32-bit integer
    CONN version

mq.dh.flagspmr  Flags PMR
    Unsigned 32-bit integer
    DH flags PMR

mq.dh.nbrrec    Number of records
    Unsigned 32-bit integer
    DH number of records

mq.dh.offsetor  Offset of first OR
    Unsigned 32-bit integer
    DH offset of first OR

mq.dh.offsetpmr  Offset of first PMR
    Unsigned 32-bit integer
    DH offset of first PMR

mq.dlh.ccsid    Character set
    Signed 32-bit integer
    DLH character set

mq.dlh.destq    Destination queue
    String
    DLH destination queue

mq.dlh.destqmgr  Destination queue manager
    String
    DLH destination queue manager

mq.dlh.encoding  Encoding
    Unsigned 32-bit integer
    DLH encoding

mq.dlh.format    Format
    String
    DLH format

mq.dlh.putapplname  Put application name
    String
    DLH put application name

mq.dlh.putappltype  Put application type
    Signed 32-bit integer
    DLH put application type

mq.dlh.putdate    Put date
    String
    DLH put date

mq.dlh.puttime    Put time
    String
    DLH put time

mq.dlh.reason     Reason
    Unsigned 32-bit integer
    DLH reason

mq.dlh.structid   DLH structid
    String
    DLH structid
```

```
mq.dlh.version  Version
    Unsigned 32-bit integer
    DLH version

mq.gmo.grpstat  Group status
    Unsigned 8-bit integer
    GMO group status

mq.gmo.matchopt Match options
    Unsigned 32-bit integer
    GMO match options

mq.gmo.msgtoken Message token
    Byte array
    GMO message token

mq.gmo.options  Options
    Unsigned 32-bit integer
    GMO options

mq.gmo.reserved Reserved
    Unsigned 8-bit integer
    GMO reserved

mq.gmo.resolvq  Resolved queue name
    String
    GMO resolved queue name

mq.gmo.retlen   Returned length
    Signed 32-bit integer
    GMO returned length

mq.gmo.segmentation Segmentation
    Unsigned 8-bit integer
    GMO segmentation

mq.gmo.sgmtstat Segment status
    Unsigned 8-bit integer
    GMO segment status

mq.gmo.signal1  Signal 1
    Unsigned 32-bit integer
    GMO signal 1

mq.gmo.signal2  Signal 2
    Unsigned 32-bit integer
    GMO signal 2

mq.gmo.structid GMO structid
    String
    GMO structid

mq.gmo.version  Version
    Unsigned 32-bit integer
    GMO version

mq.gmo.waitint  Wait Interval
    Signed 32-bit integer
    GMO wait interval

mq.head.ccsid  Character set
    Signed 32-bit integer
    Header character set
```

```
mq.head.encoding  Encoding
    Unsigned 32-bit integer
    Header encoding

mq.head.flags     Flags
    Unsigned 32-bit integer
    Header flags

mq.head.format    Format
    String
    Header format

mq.head.length    Length
    Unsigned 32-bit integer
    Header length

mq.head.struct    Struct
    Byte array
    Header struct

mq.head.structid  Structid
    String
    Header structid

mq.head.version   Structid
    Unsigned 32-bit integer
    Header version

mq.id.capflags    Capability flags
    Unsigned 8-bit integer
    ID Capability flags

mq.id.ccsid       Character set
    Unsigned 16-bit integer
    ID character set

mq.id.channelname Channel name
    String
    ID channel name

mq.id.flags       Flags
    Unsigned 8-bit integer
    ID flags

mq.id.hbint       Heartbeat interval
    Unsigned 32-bit integer
    ID Heartbeat interval

mq.id.icf.convcap Conversion capable
    Boolean
    ID ICF Conversion capable

mq.id.icf.mqreq   MQ request
    Boolean
    ID ICF MQ request

mq.id.icf.msgseq  Message sequence
    Boolean
    ID ICF Message sequence

mq.id.icf.runtime Runtime application
    Boolean
    ID ICF Runtime application
```

```
mq.id.icf.splitmsg  Split messages
  Boolean
  ID ICF Split message
mq.id.icf.svrsec   Server connection security
  Boolean
  ID ICF Server connection security
mq.id.ief         Initial error flags
  Unsigned 8-bit integer
  ID initial error flags
mq.id.ief.ccsid   Invalid CCSID
  Boolean
  ID invalid CCSID
mq.id.ief.enc     Invalid encoding
  Boolean
  ID invalid encoding
mq.id.ief.fap     Invalid FAP level
  Boolean
  ID invalid FAP level
mq.id.ief.hbint   Invalid heartbeat interval
  Boolean
  ID invalid heartbeat interval
mq.id.ief.mxmsgpb Invalid maximum message per batch
  Boolean
  ID maximum message per batch
mq.id.ief.mxmsgsz Invalid message size
  Boolean
  ID invalid message size
mq.id.ief.mxtrsz  Invalid maximum transmission size
  Boolean
  ID invalid maximum transmission size
mq.id.ief.seqwrap Invalid sequence wrap value
  Boolean
  ID invalid sequence wrap value
mq.id.level       FAP level
  Unsigned 8-bit integer
  ID Formats And Protocols level
mq.id.maxmsgperbatch Maximum messages per batch
  Unsigned 16-bit integer
  ID max msg per batch
mq.id.maxmsgsize  Maximum message size
  Unsigned 32-bit integer
  ID max msg size
mq.id.maxtranssize Maximum transmission size
  Unsigned 32-bit integer
  ID max trans size
mq.id.qm          Queue manager
  String
  ID Queue manager
```

```
mq.id.seqwrap  Sequence wrap value
                Unsigned 32-bit integer
                ID seq wrap value
mq.id.structid ID structid
                String
                ID structid
mq.id.unknown2 Unknown2
                Unsigned 8-bit integer

    String
    XQH remote queue
```

```
mq.xqh.remotemgr Remote queue manager
  String
  XQH remote queue manager
mq.xqh.structid XQH structid
  String
  XQH structid
mq.xqh.version Version
  Unsigned 32-bit integer
  XQH version
```

### **WebSphere MQ Programmable Command Formats (mqpcf)**

```
mqpcf.cfh.command Command
  Unsigned 32-bit integer
  CFH command
mqpcf.cfh.compcode Completion code
  Unsigned 32-bit integer
  CFH completion code
mqpcf.cfh.control Control
  Unsigned 32-bit integer
  CFH control
mqpcf.cfh.length Length
  Unsigned 32-bit integer
  CFH length
mqpcf.cfh.msgseqnumber Message sequence number
  Unsigned 32-bit integer
  CFH message sequence number
mqpcf.cfh.paramcount Parameter count
  Unsigned 32-bit integer
  CFH parameter count
mqpcf.cfh.reasoncode Reason code
  Unsigned 32-bit integer
  CFH reason code
mqpcf.cfh.type Type
  Unsigned 32-bit integer
  CFH type
mqpcf.cfh.version Version
  Unsigned 32-bit integer
  CFH version
```

### **Wellfleet Breath of Life (bofl)**

```
bofl.pdu PDU
  Unsigned 32-bit integer
  PDU; normally equals 0x01010000 or 0x01011111
bofl.sequence Sequence
  Unsigned 32-bit integer
  incremental counter
```

**Wellfleet Compression (wcp)**

```
wcp.alg Alg
  Unsigned 8-bit integer
  Algorithm

wcp.alg1 Alg 1
  Unsigned 8-bit integer
  Algorithm #1

wcp.alg2 Alg 2
  Unsigned 8-bit integer
  Algorithm #2

wcp.alg3 Alg 3
  Unsigned 8-bit integer
  Algorithm #3

wcp.alg4 Alg 4
  Unsigned 8-bit integer
  Algorithm #4

wcp.alg_cnt Alg Count
  Unsigned 8-bit integer
  Algorithm Count

wcp.checksum Checksum
  Unsigned 8-bit integer
  Packet Checksum

wcp.cmd Command
  Unsigned 8-bit integer
  Compression Command

wcp.ext_cmd Extended Command
  Unsigned 8-bit integer
  Extended Compression Command

wcp.flag Compress Flag
  Unsigned 8-bit integer
  Compressed byte flag

wcp.hist History
  Unsigned 8-bit integer
  History Size

wcp.init Initiator
  Unsigned 8-bit integer
  Initiator

wcp.long_comp Long Compression
  Unsigned 16-bit integer
  Long Compression type

wcp.long_len Compress Length
  Unsigned 8-bit integer
  Compressed length

wcp.mark Compress Marker
  Unsigned 8-bit integer
  Compressed marker
```

wcp.off Source offset  
Unsigned 16-bit integer  
Data source offset

wcp.pib PIB  
Unsigned 8-bit integer  
PIB

wcp.ppc PerPackComp  
Unsigned 8-bit integer  
Per Packet Compression

wcp.rev Revision  
Unsigned 8-bit integer  
Revision

wcp.rexmit Rexmit  
Unsigned 8-bit integer  
Retransmit

wcp.seq SEQ  
Unsigned 16-bit integer  
Sequence Number

wcp.seq\_size Seq Size  
Unsigned 8-bit integer  
Sequence Size

wcp.short\_comp Short Compression  
Unsigned 8-bit integer  
Short Compression type

wcp.short\_len Compress Length  
Unsigned 8-bit integer  
Compressed length

wcp.tid TID  
Unsigned 16-bit integer  
TID

**Wellfleet HDLC (whdlc)**

wfleet\_hdlc.address Address  
Unsigned 8-bit integer

wfleet\_hdlc.command Command  
Unsigned 8-bit integer

**Who (who)**

who.boottime Boot Time  
Date/Time stamp

who.hostname Hostname  
String

who.idle Time Idle  
Unsigned 32-bit integer

who.loadav\_10 Load Average Over Past 10 Minutes  
Double-precision floating point

```
who.loadav_15  Load Average Over Past 15 Minutes
                Double-precision floating point
who.loadav_5   Load Average Over Past 5 Minutes
                Double-precision floating point
who.rcvtime    Receive Time
                Date/Time stamp
who.sendtime   Send Time
                Date/Time stamp
who.timeon     Time On
                Date/Time stamp
who.tty        TTY Name
                String
who.type       Type
                Unsigned 8-bit integer
who.uid        User ID
                String
who.vers       Version
                Unsigned 8-bit integer
who.whoent     Who utmp Entry
                No value
```

#### **WiMAX ASN Control Plane Protocol (wimaxasncp)**

```
wimaxasncp.authentication_msg  Message Type
                                Unsigned 8-bit integer
wimaxasncp.context_delivery_msg Message Type
                                Unsigned 8-bit integer
wimaxasncp.data_path_control_msg Message Type
                                Unsigned 8-bit integer
wimaxasncp.flags               Flags
                                Unsigned 8-bit integer
wimaxasncp.function_type       Function Type
                                Unsigned 8-bit integer
wimaxasncp.ho_control_msg      Message Type
                                Unsigned 8-bit integer
wimaxasncp.length              Length
                                Unsigned 16-bit integer
wimaxasncp.message_type        Message Type
                                Unsigned 8-bit integer
wimaxasncp.ms_state_msg        Message Type
                                Unsigned 8-bit integer
wimaxasncp.msids               MSID
                                6-byte Hardware (MAC) Address
wimaxasncp.opid                OP ID
                                Unsigned 8-bit integer
```

```
wimaxasncp.paging_msg  Message Type
    Unsigned 8-bit integer
wimaxasncp.qos_msg  Message Type
    Unsigned 8-bit integer
wimaxasncp.r3_mobility_msg  Message Type
    Unsigned 8-bit integer
wimaxasncp.reauthentication_msg  Message Type
    Unsigned 8-bit integer
wimaxasncp.reserved1  Reserved
    Unsigned 32-bit integer
wimaxasncp.reserved2  Reserved
    Unsigned 16-bit integer
wimaxasncp.rrm_msg  Message Type
    Unsigned 8-bit integer
wimaxasncp.session_msg  Message Type
    Unsigned 8-bit integer
wimaxasncp.tlv  TLV
    Byte array
wimaxasncp.tlv.AK  AK
    Byte array
    type=5
wimaxasncp.tlv.AK.value  Value
    Byte array
    value for type=5
wimaxasncp.tlv.AK_Context  AK Context
    Byte array
    type=6, Compound
wimaxasncp.tlv.AK_ID  AK ID
    Byte array
    type=7
wimaxasncp.tlv.AK_ID.value  Value
    Byte array
    value for type=7
wimaxasncp.tlv.AK_Lifetime  AK Lifetime
    Byte array
    type=8
wimaxasncp.tlv.AK_Lifetime.value  Value
    Unsigned 16-bit integer
    value for type=8
wimaxasncp.tlv.AK_SN  AK SN
    Byte array
    type=9
wimaxasncp.tlv.AK_SN.value  Value
    Unsigned 8-bit integer
    value for type=9
```

```
wimaxasncp.tlv.Accept_Reject_Indicator  Accept/Reject Indicator
  Byte array
  type=1

wimaxasncp.tlv.Accept_Reject_Indicator.value  Value
  Unsigned 8-bit integer
  value for type=1

wimaxasncp.tlv.Accounting_Extension  Accounting Extension
  Byte array
  type=2

wimaxasncp.tlv.Accounting_Extension.value  Value
  Byte array
  value for type=2

wimaxasncp.tlv.Action_Code  Action Code
  Byte array
  type=3

wimaxasncp.tlv.Action_Code.value  Value
  Unsigned 16-bit integer
  value for type=3

wimaxasncp.tlv.Action_Time  Action Time
  Byte array
  type=4

wimaxasncp.tlv.Action_Time.value  Value
  Unsigned 32-bit integer
  value for type=4

wimaxasncp.tlv.Anchor_ASN_GW_ID_Anchor_DPF_Identifier  Anchor ASN GW ID / Anchor
  Byte array
  type=10

wimaxasncp.tlv.Anchor_ASN_GW_ID_Anchor_DPF_Identifier.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=10

wimaxasncp.tlv.Anchor_ASN_GW_ID_Anchor_DPF_Identifier.ipv4_value  IPv4 Address
  IPv4 address
  value for type=10

wimaxasncp.tlv.Anchor_ASN_GW_ID_Anchor_DPF_Identifier.ipv6_value  IPv6 Address
  IPv6 address
  value for type=10

wimaxasncp.tlv.Anchor_Authenticator_ID  Anchor Authenticator ID
  Byte array
  type=16

wimaxasncp.tlv.Anchor_Authenticator_ID.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=16

wimaxasncp.tlv.Anchor_Authenticator_ID.ipv4_value  IPv4 Address
  IPv4 address
  value for type=16

wimaxasncp.tlv.Anchor_Authenticator_ID.ipv6_value  IPv6 Address
  IPv6 address
  value for type=16
```

```
wimaxasncp.tlv.Anchor_MM_Context  Anchor MM Context
  Byte array
  type=11, Compound

wimaxasncp.tlv.Anchor_PCID_Anchor_Paging_Controller_ID  Anchor PCID - Anchor Pag
  Byte array
  type=12

wimaxasncp.tlv.Anchor_PCID_Anchor_Paging_Controller_ID.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=12

wimaxasncp.tlv.Anchor_PCID_Anchor_Paging_Controller_ID.ipv4_value  IPv4 Address
  IPv4 address
  value for type=12

wimaxasncp.tlv.Anchor_PCID_Anchor_Paging_Controller_ID.ipv6_value  IPv6 Address
  IPv6 address
  value for type=12

wimaxasncp.tlv.Anchor_PC_Relocation_Destination  Anchor PC Relocation Destinati
  Byte array
  type=13

wimaxasncp.tlv.Anchor_PC_Relocation_Destination.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=13

wimaxasncp.tlv.Anchor_PC_Relocation_Destination.ipv4_value  IPv4 Address
  IPv4 address
  value for type=13

wimaxasncp.tlv.Anchor_PC_Relocation_Destination.ipv6_value  IPv6 Address
  IPv6 address
  value for type=13

wimaxasncp.tlv.Anchor_PC_Relocation_Request_Response  Anchor PC Relocation Reque
  Byte array
  type=14

wimaxasncp.tlv.Anchor_PC_Relocation_Request_Response.value  Value
  Unsigned 8-bit integer
  value for type=14

wimaxasncp.tlv.Associated_PHSI  Associated PHSI
  Byte array
  type=15

wimaxasncp.tlv.Associated_PHSI.value  Value
  Unsigned 8-bit integer
  value for type=15

wimaxasncp.tlv.Auth_IND  Auth-IND
  Byte array
  type=20

wimaxasncp.tlv.Auth_IND.value  Value
  Unsigned 8-bit integer
  value for type=20

wimaxasncp.tlv.Authentication_Complete  Authentication Complete
  Byte array
  type=17, Compound
```

```
wimaxasncp.tlv.Authentication_Result  Authentication Result
  Byte array
  type=18

wimaxasncp.tlv.Authentication_Result.value  Value
  Unsigned 8-bit integer
  value for type=18

wimaxasncp.tlv.Authenticator_Identifier  Authenticator Identifier
  Byte array
  type=19

wimaxasncp.tlv.Authenticator_Identifier.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=19

wimaxasncp.tlv.Authenticator_Identifier.ipv4_value  IPv4 Address
  IPv4 address
  value for type=19

wimaxasncp.tlv.Authenticator_Identifier.ipv6_value  IPv6 Address
  IPv6 address
  value for type=19

wimaxasncp.tlv.Authorization_Policy  Authorization Policy
  Byte array
  type=21

wimaxasncp.tlv.Authorization_Policy.value  Value
  Unsigned 16-bit integer
  value for type=21

wimaxasncp.tlv.Available_Radio_Resource_DL  Available Radio Resource DL
  Byte array
  type=22

wimaxasncp.tlv.Available_Radio_Resource_DL.value  Value
  Unsigned 8-bit integer
  value for type=22

wimaxasncp.tlv.Available_Radio_Resource_UL  Available Radio Resource UL
  Byte array
  type=23

wimaxasncp.tlv.Available_Radio_Resource_UL.value  Value
  Unsigned 8-bit integer
  value for type=23

wimaxasncp.tlv.BE_Data_Delivery_Service  BE Data Delivery Service
  Byte array
  type=24, Compound

wimaxasncp.tlv.BS_ID  BS ID
  Byte array
  type=25

wimaxasncp.tlv.BS_ID.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=25

wimaxasncp.tlv.BS_ID.ipv4_value  IPv4 Address
  IPv4 address
  value for type=25
```

```
wimaxasncp.tlv.BS_ID.ipv6_value  IPv6 Address
    IPv6 address
    value for type=25
wimaxasncp.tlv.BS_Info  BS Info
    Byte array
    type=26, Compound
wimaxasncp.tlv.BS_originated_EAP_Start_Flag  BS-originated EAP-Start Flag
    Byte array
    type=27, Value = Null
wimaxasncp.tlv.CID  CID
    Byte array
    type=29
wimaxasncp.tlv.CID.value  Value
    Unsigned 16-bit integer
    value for type=29
wimaxasncp.tlv.CMAC_KEY_COUNT  CMAC_KEY_COUNT
    Byte array
    type=34
wimaxasncp.tlv.CMAC_KEY_COUNT.value  Value
    Unsigned 16-bit integer
    value for type=34
wimaxasncp.tlv.CS_Type  CS Type
    Byte array
    type=39
wimaxasncp.tlv.CS_Type.value  Value
    Unsigned 8-bit integer
    value for type=39
wimaxasncp.tlv.Care_Of_Address_CoA  Care-Of Address (CoA)
    Byte array
    type=28
wimaxasncp.tlv.Care_Of_Address_CoA.value  Value
    IPv4 address
    value for type=28
wimaxasncp.tlv.Classifier  Classifier
    Byte array
    type=30, Compound
wimaxasncp.tlv.Classifier_Action  Classifier Action
    Byte array
    type=31
wimaxasncp.tlv.Classifier_Action.value  Value
    Unsigned 8-bit integer
    value for type=31
wimaxasncp.tlv.Classifier_Rule_Priority  Classifier Rule Priority
    Byte array
    type=32
wimaxasncp.tlv.Classifier_Rule_Priority.value  Value
    Unsigned 8-bit integer
    value for type=32
```

```
wimaxasncp.tlv.Classifier_Type Classifier Type
  Byte array
  type=33

wimaxasncp.tlv.Classifier_Type.value Value
  Unsigned 8-bit integer
  value for type=33

wimaxasncp.tlv.Combined_Resources_Required Combined Resources Required
  Byte array
  type=35

wimaxasncp.tlv.Combined_Resources_Required.value Value
  Unsigned 16-bit integer
  value for type=35

wimaxasncp.tlv.Context_Purpose_Indicator Context Purpose Indicator
  Byte array
  type=36

wimaxasncp.tlv.Context_Purpose_Indicator.value Value
  Unsigned 32-bit integer
  value for type=36

wimaxasncp.tlv.Control_Plane_Indicator Control Plane Indicator
  Byte array
  type=1136

wimaxasncp.tlv.Control_Plane_Indicator.value Value
  Unsigned 8-bit integer
  value for type=1136

wimaxasncp.tlv.Correlation_ID Correlation ID
  Byte array
  type=37

wimaxasncp.tlv.Correlation_ID.value Value
  Unsigned 32-bit integer
  value for type=37

wimaxasncp.tlv.Cryptographic_Suite Cryptographic Suite
  Byte array
  type=38

wimaxasncp.tlv.Cryptographic_Suite.value Value
  Unsigned 32-bit integer
  value for type=38

wimaxasncp.tlv.DCD_Setting DCD Setting
  Byte array
  type=49, TBD

wimaxasncp.tlv.DCD_Setting.value Value
  Byte array
  value for type=49

wimaxasncp.tlv.DCD_UCD_Configuration_Change_Count DCD/UCD Configuration Change
  Byte array
  type=48, TBD

wimaxasncp.tlv.DCD_UCD_Configuration_Change_Count.value Value
  Byte array
  value for type=48
```

```
wimaxasncp.tlv.DHCP_Key    DHCP Key
    Byte array
    type=51

wimaxasncp.tlv.DHCP_Key.value  Value
    Byte array
    value for type=51

wimaxasncp.tlv.DHCP_Key_ID  DHCP Key ID
    Byte array
    type=52

wimaxasncp.tlv.DHCP_Key_ID.value  Value
    Unsigned 32-bit integer
    value for type=52

wimaxasncp.tlv.DHCP_Key_Lifetime  DHCP Key Lifetime
    Byte array
    type=53

wimaxasncp.tlv.DHCP_Key_Lifetime.value  Value
    Unsigned 32-bit integer
    value for type=53

wimaxasncp.tlv.DHCP_Proxy_Info  DHCP Proxy Info
    Byte array
    type=54, Compound

wimaxasncp.tlv.DHCP_Relay_Address  DHCP Relay Address
    Byte array
    type=55

wimaxasncp.tlv.DHCP_Relay_Address.value  Value
    IPv4 address
    value for type=55

wimaxasncp.tlv.DHCP_Relay_Info  DHCP Relay Info
    Byte array
    type=56, Compound

wimaxasncp.tlv.DHCP_Server_Address  DHCP Server Address
    Byte array
    type=57

wimaxasncp.tlv.DHCP_Server_Address.value  Value
    IPv4 address
    value for type=57

wimaxasncp.tlv.DHCP_Server_List  DHCP Server List
    Byte array
    type=58, Compound

wimaxasncp.tlv.DL_PHY_Quality_Info  DL PHY Quality Info
    Byte array
    type=60, TBD

wimaxasncp.tlv.DL_PHY_Quality_Info.value  Value
    Byte array
    value for type=60

wimaxasncp.tlv.DL_PHY_Service_Level  DL PHY Service Level
    Byte array
    type=61, TBD
```

```
wimaxasncp.tlv.DL_PHY_Service_Level.value  Value
  Byte array
  value for type=61

wimaxasncp.tlv.Data_Integrity  Data Integrity
  Byte array
  type=40

wimaxasncp.tlv.Data_Integrity.value  Value
  Unsigned 8-bit integer
  value for type=40

wimaxasncp.tlv.Data_Integrity_Info  Data Integrity Info
  Byte array
  type=41, TBD

wimaxasncp.tlv.Data_Integrity_Info.value  Value
  Byte array
  value for type=41

wimaxasncp.tlv.Data_Path_Encapsulation_Type  Data Path Encapsulation Type
  Byte array
  type=42

wimaxasncp.tlv.Data_Path_Encapsulation_Type.value  Value
  Unsigned 8-bit integer
  value for type=42

wimaxasncp.tlv.Data_Path_Establishment_Option  Data Path Establishment Option
  Byte array
  type=43

wimaxasncp.tlv.Data_Path_Establishment_Option.value  Value
  Unsigned 8-bit integer
  value for type=43

wimaxasncp.tlv.Data_Path_ID  Data Path ID
  Byte array
  type=44

wimaxasncp.tlv.Data_Path_ID.value  Value
  Unsigned 32-bit integer
  value for type=44

wimaxasncp.tlv.Data_Path_Info  Data Path Info
  Byte array
  type=45, Compound

wimaxasncp.tlv.Data_Path_Integrity_Mechanism  Data Path Integrity Mechanism
  Byte array
  type=46

wimaxasncp.tlv.Data_Path_Integrity_Mechanism.value  Value
  Unsigned 8-bit integer
  value for type=46

wimaxasncp.tlv.Data_Path_Type  Data Path Type
  Byte array
  type=47

wimaxasncp.tlv.Data_Path_Type.value  Value
  Unsigned 8-bit integer
  value for type=47
```

```
wimaxasncp.tlv.Destination_Identifier  Destination Identifier
    Byte array
    type=65282

wimaxasncp.tlv.Destination_Identifier.bsid_value  BS ID
    6-byte Hardware (MAC) Address
    value for type=65282

wimaxasncp.tlv.Destination_Identifier.ipv4_value  IPv4 Address
    IPv4 address
    value for type=65282

wimaxasncp.tlv.Destination_Identifier.ipv6_value  IPv6 Address
    IPv6 address
    value for type=65282

wimaxasncp.tlv.Device_Authentication_Indicator  Device Authentication Indicator
    Byte array
    type=50

wimaxasncp.tlv.Device_Authentication_Indicator.value  Value
    Unsigned 8-bit integer
    value for type=50

wimaxasncp.tlv.Direction  Direction
    Byte array
    type=59

wimaxasncp.tlv.Direction.value  Value
    Unsigned 16-bit integer
    value for type=59

wimaxasncp.tlv.EAP_Payload  EAP Payload
    Byte array
    type=62

wimaxasncp.tlv.EAP_Payload.value  Value
    Byte array
    EAP payload embedded in Value

wimaxasncp.tlv.EIK  EIK
    Byte array
    type=63

wimaxasncp.tlv.EIK.value  Value
    Byte array
    value for type=63

wimaxasncp.tlv.ERT_VR_Data_Delivery_Service  ERT-VR Data Delivery Service
    Byte array
    type=64, Compound

wimaxasncp.tlv.Exit_IDLE_Mode_Operation_Indication  Exit IDLE Mode Operation Ind
    Byte array
    type=65

wimaxasncp.tlv.Exit_IDLE_Mode_Operation_Indication.value  Value
    Unsigned 8-bit integer
    value for type=65

wimaxasncp.tlv.FA_HA_Key  FA-HA Key
    Byte array
    type=66
```

```
wimaxasncp.tlv.FA_HA_Key.value  Value
    Byte array
    value for type=66

wimaxasncp.tlv.FA_HA_Key_Lifetime  FA-HA Key Lifetime
    Byte array
    type=67

wimaxasncp.tlv.FA_HA_Key_Lifetime.value  Value
    Unsigned 32-bit integer
    value for type=67

wimaxasncp.tlv.FA_HA_Key_SPI  FA-HA Key SPI
    Byte array
    type=68

wimaxasncp.tlv.FA_HA_Key_SPI.value  Value
    Unsigned 32-bit integer
    value for type=68

wimaxasncp.tlv.FA_IP_Address  FA IP Address
    Byte array
    type=70

wimaxasncp.tlv.FA_IP_Address.value  Value
    IPv4 address
    value for type=70

wimaxasncp.tlv.FA_Relocation_Indication  FA Relocation Indication
    Byte array
    type=71

wimaxasncp.tlv.FA_Relocation_Indication.value  Value
    Unsigned 8-bit integer
    value for type=71

wimaxasncp.tlv.Failure_Indication  Failure Indication
    Byte array
    type=69

wimaxasncp.tlv.Failure_Indication.value  Value
    Unsigned 8-bit integer
    value for type=69

wimaxasncp.tlv.Full_DCD_Setting  Full DCD Setting
    Byte array
    type=72, TBD

wimaxasncp.tlv.Full_DCD_Setting.value  Value
    Byte array
    value for type=72

wimaxasncp.tlv.Full_UCD_Setting  Full UCD Setting
    Byte array
    type=73, TBD

wimaxasncp.tlv.Full_UCD_Setting.value  Value
    Byte array
    value for type=73

wimaxasncp.tlv.Global_Service_Class_Change  Global Service Class Change
    Byte array
    type=74, TBD
```

```
wimaxasncp.tlv.Global_Service_Class_Change.value  Value
  Byte array
  value for type=74
wimaxasncp.tlv.HA_IP_Address  HA IP Address
  Byte array
  type=75
wimaxasncp.tlv.HA_IP_Address.ipv4_value  IPv4 Address
  IPv4 address
  value for type=75
wimaxasncp.tlv.HA_IP_Address.ipv6_value  IPv6 Address
  IPv6 address
  value for type=75
wimaxasncp.tlv.HO_Confirm_Type  HO Confirm Type
  Byte array
  type=76
wimaxasncp.tlv.HO_Confirm_Type.value  Value
  Unsigned 8-bit integer
  value for type=76
wimaxasncp.tlv.HO_Process_Optimization  HO Process Optimization
  Byte array
  type=78, TBD
wimaxasncp.tlv.HO_Process_Optimization.value  Value
  Byte array
  value for type=78
wimaxasncp.tlv.HO_Type  HO Type
  Byte array
  type=79
wimaxasncp.tlv.HO_Type.value  Value
  Unsigned 32-bit integer
  value for type=79
wimaxasncp.tlv.Home_Address_HoA  Home Address (HoA)
  Byte array
  type=77
wimaxasncp.tlv.Home_Address_HoA.value  Value
  IPv4 address
  value for type=77
wimaxasncp.tlv.IDLE_Mode_Info  IDLE Mode Info
  Byte array
  type=80, Compound
wimaxasncp.tlv.IDLE_Mode_Retain_Info  IDLE Mode Retain Info
  Byte array
  type=81, TBD
wimaxasncp.tlv.IDLE_Mode_Retain_Info.value  Value
  Byte array
  value for type=81
wimaxasncp.tlv.IM_Auth_Indication  IM Auth Indication
  Byte array
  type=1228
```

```
wimaxasncp.tlv.IM_Auth_Indication.value  Value
    Unsigned 8-bit integer
    value for type=1228

wimaxasncp.tlv.IP_Destination_Address_and_Mask  IP Destination Address and Mask
    Byte array
    type=82

wimaxasncp.tlv.IP_Destination_Address_and_Mask.value  Value
    Byte array
    value for type=82

wimaxasncp.tlv.IP_Destination_Address_and_Mask.value.ipv4  IPv4 Address
    IPv4 address
    value component for type=82

wimaxasncp.tlv.IP_Destination_Address_and_Mask.value.ipv4_mask  IPv4 Mask
    IPv4 address
    value component for type=82

wimaxasncp.tlv.IP_Destination_Address_and_Mask.value.ipv6  IPv6 Address
    IPv6 address
    value component for type=82

wimaxasncp.tlv.IP_Destination_Address_and_Mask.value.ipv6_mask  IPv6 Mask
    IPv6 address
    value component for type=82

wimaxasncp.tlv.IP_Remained_Time  IP Remained Time
    Byte array
    type=83

wimaxasncp.tlv.IP_Remained_Time.value  Value
    Unsigned 32-bit integer
    value for type=83

wimaxasncp.tlv.IP_Source_Address_and_Mask  IP Source Address and Mask
    Byte array
    type=84

wimaxasncp.tlv.IP_Source_Address_and_Mask.value  Value
    Byte array
    value for type=84

wimaxasncp.tlv.IP_Source_Address_and_Mask.value.ipv4  IPv4 Address
    IPv4 address
    value component for type=84

wimaxasncp.tlv.IP_Source_Address_and_Mask.value.ipv4_mask  IPv4 Mask
    IPv4 address
    value component for type=84

wimaxasncp.tlv.IP_Source_Address_and_Mask.value.ipv6  IPv6 Address
    IPv6 address
    value component for type=84

wimaxasncp.tlv.IP_Source_Address_and_Mask.value.ipv6_mask  IPv6 Mask
    IPv6 address
    value component for type=84

wimaxasncp.tlv.IP_TOS_DSCP_Range_and_Mask  IP TOS/DSCP Range and Mask
    Byte array
    type=85, TBD
```

```
wimaxasncp.tlv.IP_TOS_DSCP_Range_and_Mask.value  Value
  Byte array
  value for type=85
wimaxasncp.tlv.Key_Change_Indicator  Key Change Indicator
  Byte array
  type=86
wimaxasncp.tlv.Key_Change_Indicator.value  Value
  Unsigned 8-bit integer
  value for type=86
wimaxasncp.tlv.LU_Result_Indicator  LU Result Indicator
  Byte array
  type=90
wimaxasncp.tlv.LU_Result_Indicator.value  Value
  Unsigned 8-bit integer
  value for type=90
wimaxasncp.tlv.L_BSID  L-BSID
  Byte array
  type=87
wimaxasncp.tlv.L_BSID.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=87
wimaxasncp.tlv.L_BSID.ipv4_value  IPv4 Address
  IPv4 address
  value for type=87
wimaxasncp.tlv.L_BSID.ipv6_value  IPv6 Address
  IPv6 address
  value for type=87
wimaxasncp.tlv.Location_Update_Status  Location Update Status
  Byte array
  type=88
wimaxasncp.tlv.Location_Update_Status.value  Value
  Unsigned 8-bit integer
  value for type=88
wimaxasncp.tlv.Location_Update_Success_Failure_Indication  Location Update Success/Failure Indication
  Byte array
  type=89
wimaxasncp.tlv.Location_Update_Success_Failure_Indication.value  Value
  Unsigned 8-bit integer
  value for type=89
wimaxasncp.tlv.MIP4_Info  MIP4 Info
  Byte array
  type=96, Compound
wimaxasncp.tlv.MIP4_Security_Info  MIP4 Security Info
  Byte array
  type=97, Compound
wimaxasncp.tlv.MN_FA_Key  MN-FA Key
  Byte array
  type=98
```

```
wimaxasncp.tlv.MN_FA_Key.value  Value
    Byte array
    value for type=98

wimaxasncp.tlv.MN_FA_SPI  MN-FA SPI
    Byte array
    type=99

wimaxasncp.tlv.MN_FA_SPI.value  Value
    Unsigned 32-bit integer
    value for type=99

wimaxasncp.tlv.MS_Authorization_Context  MS Authorization Context
    Byte array
    type=100, Compound

wimaxasncp.tlv.MS_FA_Context  MS FA Context
    Byte array
    type=101, Compound

wimaxasncp.tlv.MS_ID  MS ID
    Byte array
    type=102

wimaxasncp.tlv.MS_ID.value  Value
    6-byte Hardware (MAC) Address
    value for type=102

wimaxasncp.tlv.MS_Info  MS Info
    Byte array
    type=103, Compound

wimaxasncp.tlv.MS_Mobility_Mode  MS Mobility Mode
    Byte array
    type=104, TBD

wimaxasncp.tlv.MS_Mobility_Mode.value  Value
    Byte array
    value for type=104

wimaxasncp.tlv.MS_NAI  MS NAI
    Byte array
    type=105

wimaxasncp.tlv.MS_NAI.value  Value
    String
    value for type=105

wimaxasncp.tlv.MS_Networking_Context  MS Networking Context
    Byte array
    type=106, Compound

wimaxasncp.tlv.MS_Security_Context  MS Security Context
    Byte array
    type=107, Compound

wimaxasncp.tlv.MS_Security_History  MS Security History
    Byte array
    type=108, Compound

wimaxasncp.tlv.Maximum_Latency  Maximum Latency
    Byte array
    type=91
```

```
wimaxasncp.tlv.Maximum_Latency.value  Value
    Unsigned 32-bit integer
    value for type=91

wimaxasncp.tlv.Maximum_Sustained_Traffic_Rate  Maximum Sustained Traffic Rate
    Byte array
    type=92

wimaxasncp.tlv.Maximum_Sustained_Traffic_Rate.value  Value
    Unsigned 32-bit integer
    value for type=92

wimaxasncp.tlv.Maximum_Traffic_Burst  Maximum Traffic Burst
    Byte array
    type=93

wimaxasncp.tlv.Maximum_Traffic_Burst.value  Value
    Unsigned 32-bit integer
    value for type=93

wimaxasncp.tlv.Media_Flow_Type  Media Flow Type
    Byte array
    type=94, TBD

wimaxasncp.tlv.Media_Flow_Type.value  Value
    Byte array
    value for type=94

wimaxasncp.tlv.Minimum_Reserved_Traffic_Rate  Minimum Reserved Traffic Rate
    Byte array
    type=95

wimaxasncp.tlv.Minimum_Reserved_Traffic_Rate.value  Value
    Unsigned 32-bit integer
    value for type=95

wimaxasncp.tlv.NRT_VR_Data_Delivery_Service  NRT-VR Data Delivery Service
    Byte array
    type=111, Compound

wimaxasncp.tlv.Network_Exit_Indicator  Network Exit Indicator
    Byte array
    type=109

wimaxasncp.tlv.Network_Exit_Indicator.value  Value
    Unsigned 8-bit integer
    value for type=109

wimaxasncp.tlv.Newer_TEK_Parameters  Newer TEK Parameters
    Byte array
    type=110, Compound

wimaxasncp.tlv.Old_Anchor_PCID  Old Anchor PCID
    Byte array
    type=113

wimaxasncp.tlv.Old_Anchor_PCID.bsid_value  BS ID
    6-byte Hardware (MAC) Address
    value for type=113

wimaxasncp.tlv.Old_Anchor_PCID.ipv4_value  IPv4 Address
    IPv4 address
    value for type=113
```

```
wimaxasncp.tlv.Old_Anchor_PCID.ipv6_value  IPv6 Address
  IPv6 address
  value for type=113
wimaxasncp.tlv.Older_TEK_Parameters  Older TEK Parameters
  Byte array
  type=112, Compound
wimaxasncp.tlv.PC_Relocation_Indication  PC Relocation Indication
  Byte array
  type=122, TBD
wimaxasncp.tlv.PC_Relocation_Indication.value  Value
  Byte array
  value for type=122
wimaxasncp.tlv.PGID_Paging_Group_ID  PGID - Paging Group ID
  Byte array
  type=123
wimaxasncp.tlv.PGID_Paging_Group_ID.value  Value
  Unsigned 16-bit integer
  value for type=123
wimaxasncp.tlv.PHSF  PHSF
  Byte array
  type=124
wimaxasncp.tlv.PHSF.value  Value
  Byte array
  value for type=124
wimaxasncp.tlv.PHSI  PHSI
  Byte array
  type=125
wimaxasncp.tlv.PHSI.value  Value
  Unsigned 8-bit integer
  value for type=125
wimaxasncp.tlv.PHSM  PHSM
  Byte array
  type=126
wimaxasncp.tlv.PHSM.value  Value
  Byte array
  value for type=126
wimaxasncp.tlv.PHSS  PHSS
  Byte array
  type=129
wimaxasncp.tlv.PHSS.value  Value
  Unsigned 8-bit integer
  value for type=129
wimaxasncp.tlv.PHSV  PHSV
  Byte array
  type=130
wimaxasncp.tlv.PHSV.value  Value
  Unsigned 8-bit integer
  value for type=130
```

```
wimaxasncp.tlv.PHS_Rule    PHS Rule
    Byte array
    type=127, Compound

wimaxasncp.tlv.PHS_Rule_Action    PHS Rule Action
    Byte array
    type=128

wimaxasncp.tlv.PHS_Rule_Action.value    Value
    Unsigned 8-bit integer
    value for type=128

wimaxasncp.tlv.PKM2    PKM2
    Byte array
    type=134

wimaxasncp.tlv.PKM2.value    Value
    Unsigned 8-bit integer
    value for type=134

wimaxasncp.tlv.PKM_Context    PKM Context
    Byte array
    type=131

wimaxasncp.tlv.PKM_Context.value    Value
    Unsigned 8-bit integer
    value for type=131

wimaxasncp.tlv.PMIP4_Client_Location    PMIP4 Client Location
    Byte array
    type=132

wimaxasncp.tlv.PMIP4_Client_Location.value    Value
    IPv4 address
    value for type=132

wimaxasncp.tlv.PMK2_SN    PMK2 SN
    Byte array
    type=135

wimaxasncp.tlv.PMK2_SN.value    Value
    Unsigned 8-bit integer
    value for type=135

wimaxasncp.tlv.PMK_SN    PMK SN
    Byte array
    type=133

wimaxasncp.tlv.PMK_SN.value    Value
    Unsigned 8-bit integer
    value for type=133

wimaxasncp.tlv.PN_Counter    PN Counter
    Byte array
    type=136

wimaxasncp.tlv.PN_Counter.value    Value
    Unsigned 32-bit integer
    value for type=136

wimaxasncp.tlv.Packet_Classification_Rule_Media_Flow_Description    Packet Classif
    Byte array
    type=114, Compound
```

```
wimaxasncp.tlv.Paging_Announce_Timer  Paging Announce Timer
  Byte array
  type=115

wimaxasncp.tlv.Paging_Announce_Timer.value  Value
  Unsigned 16-bit integer
  value for type=115

wimaxasncp.tlv.Paging_Cause  Paging Cause
  Byte array
  type=116

wimaxasncp.tlv.Paging_Cause.value  Value
  Unsigned 8-bit integer
  value for type=116

wimaxasncp.tlv.Paging_Controller_Identifier  Paging Controller Identifier
  Byte array
  type=117

wimaxasncp.tlv.Paging_Controller_Identifier.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=117

wimaxasncp.tlv.Paging_Controller_Identifier.ipv4_value  IPv4 Address
  IPv4 address
  value for type=117

wimaxasncp.tlv.Paging_Controller_Identifier.ipv6_value  IPv6 Address
  IPv6 address
  value for type=117

wimaxasncp.tlv.Paging_Cycle  Paging Cycle
  Byte array
  type=118, TBD

wimaxasncp.tlv.Paging_Cycle.value  Value
  Byte array
  value for type=118

wimaxasncp.tlv.Paging_Information  Paging Information
  Byte array
  type=119, Compound

wimaxasncp.tlv.Paging_Offset  Paging Offset
  Byte array
  type=120

wimaxasncp.tlv.Paging_Offset.value  Value
  Unsigned 16-bit integer
  value for type=120

wimaxasncp.tlv.Paging_Start_Stop  Paging Start/Stop
  Byte array
  type=121, TBD

wimaxasncp.tlv.Paging_Start_Stop.value  Value
  Byte array
  value for type=121

wimaxasncp.tlv.Preamble_Index_Sub_channel_Index  Preamble Index/Sub-channel Index
  Byte array
  type=137
```

```
wimaxasncp.tlv.Preamble_Index_Sub_channel_Index.value  Value
  Unsigned 8-bit integer
  value for type=137
wimaxasncp.tlv.Protocol  Protocol
  Byte array
  type=138
wimaxasncp.tlv.Protocol.value  Value
  Byte array
  value for type=138
wimaxasncp.tlv.Protocol.value.protocol  Protocol
  Unsigned 16-bit integer
  value component for type=138
wimaxasncp.tlv.Protocol_Destination_Port_Range  Protocol Destination Port Range
  Byte array
  type=139
wimaxasncp.tlv.Protocol_Destination_Port_Range.value  Value
  Byte array
  value for type=139
wimaxasncp.tlv.Protocol_Destination_Port_Range.value.port_high  Port High
  Unsigned 16-bit integer
  value component for type=139
wimaxasncp.tlv.Protocol_Destination_Port_Range.value.port_low  Port Low
  Unsigned 16-bit integer
  value component for type=139
wimaxasncp.tlv.Protocol_Source_Port_Range  Protocol Source Port Range
  Byte array
  type=140
wimaxasncp.tlv.Protocol_Source_Port_Range.value  Value
  Byte array
  value for type=140
wimaxasncp.tlv.Protocol_Source_Port_Range.value.port_high  Port High
  Unsigned 16-bit integer
  value component for type=140
wimaxasncp.tlv.Protocol_Source_Port_Range.value.port_low  Port Low
  Unsigned 16-bit integer
  value component for type=140
wimaxasncp.tlv.QoS_Parameters  QoS Parameters
  Byte array
  type=141, Compound
wimaxasncp.tlv.R3_Operation_Status  R3 Operation Status
  Byte array
  type=167, TBD
wimaxasncp.tlv.R3_Operation_Status.value  Value
  Byte array
  value for type=167
wimaxasncp.tlv.R3_Release_Reason  R3 Release Reason
  Byte array
  type=168
```

```
wimaxasncp.tlv.R3_Release_Reason.value  Value
    Unsigned 8-bit integer
    value for type=168

wimaxasncp.tlv.REG_Context  REG Context
    Byte array
    type=144

wimaxasncp.tlv.REG_Context.value  Value
    Unsigned 8-bit integer
    value for type=144

wimaxasncp.tlv.ROHC_EC RTP_Context_ID  ROHC/EC RTP Context ID
    Byte array
    type=155, TBD

wimaxasncp.tlv.ROHC_EC RTP_Context_ID.value  Value
    Byte array
    value for type=155

wimaxasncp.tlv.RRM_Absolute_Threshold_Value_J  RRM Absolute Threshold Value J
    Byte array
    type=157

wimaxasncp.tlv.RRM_Absolute_Threshold_Value_J.value  Value
    Unsigned 8-bit integer
    value for type=157

wimaxasncp.tlv.RRM_Averaging_Time_T  RRM Averaging Time T
    Byte array
    type=158

wimaxasncp.tlv.RRM_Averaging_Time_T.value  Value
    Unsigned 16-bit integer
    value for type=158

wimaxasncp.tlv.RRM_BS_Info  RRM BS Info
    Byte array
    type=159, Compound

wimaxasncp.tlv.RRM_BS_MS_PHY_Quality_Info  RRM BS-MS PHY Quality Info
    Byte array
    type=160, Compound

wimaxasncp.tlv.RRM_Relative_Threshold_RT  RRM Relative Threshold RT
    Byte array
    type=161

wimaxasncp.tlv.RRM_Relative_Threshold_RT.value  Value
    Unsigned 8-bit integer
    value for type=161

wimaxasncp.tlv.RRM_Reporting_Characteristics  RRM Reporting Characteristics
    Byte array
    type=162

wimaxasncp.tlv.RRM_Reporting_Characteristics.value  Value
    Unsigned 32-bit integer
    value for type=162

wimaxasncp.tlv.RRM_Reporting_Period_P  RRM Reporting Period P
    Byte array
    type=163
```

```
wimaxasncp.tlv.RRM_Reporting_Period_P.value  Value
  Unsigned 16-bit integer
  value for type=163

wimaxasncp.tlv.RRM_Spare_Capacity_Report_Type  RRM Spare Capacity Report Type
  Byte array
  type=164

wimaxasncp.tlv.RRM_Spare_Capacity_Report_Type.value  Value
  Unsigned 8-bit integer
  value for type=164

wimaxasncp.tlv.RT_VR_Data_Delivery_Service  RT-VR Data Delivery Service
  Byte array
  type=165, Compound

wimaxasncp.tlv.Radio_Resource_Fluctuation  Radio Resource Fluctuation
  Byte array
  type=142

wimaxasncp.tlv.Radio_Resource_Fluctuation.value  Value
  Unsigned 8-bit integer
  value for type=142

wimaxasncp.tlv.Reduced_Resources_Code  Reduced Resources Code
  Byte array
  type=143, Value = Null

wimaxasncp.tlv.Registration_Type  Registration Type
  Byte array
  type=145

wimaxasncp.tlv.Registration_Type.value  Value
  Unsigned 32-bit integer
  value for type=145

wimaxasncp.tlv.Relative_Delay  Relative Delay
  Byte array
  type=146

wimaxasncp.tlv.Relative_Delay.value  Value
  Unsigned 8-bit integer
  value for type=146

wimaxasncp.tlv.Relocation_Destination_ID  Relocation Destination ID
  Byte array
  type=147

wimaxasncp.tlv.Relocation_Destination_ID.bsid_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=147

wimaxasncp.tlv.Relocation_Destination_ID.ipv4_value  IPv4 Address
  IPv4 address
  value for type=147

wimaxasncp.tlv.Relocation_Destination_ID.ipv6_value  IPv6 Address
  IPv6 address
  value for type=147

wimaxasncp.tlv.Relocation_Response  Relocation Response
  Byte array
  type=148, TBD
```

```
wimaxasncp.tlv.Relocation_Response.value  Value
  Byte array
  value for type=148
wimaxasncp.tlv.Relocation_Success_Indication  Relocation Success Indication
  Byte array
  type=149, TBD
wimaxasncp.tlv.Relocation_Success_Indication.value  Value
  Byte array
  value for type=149
wimaxasncp.tlv.Request_Transmission_Policy  Request/Transmission Policy
  Byte array
  type=150
wimaxasncp.tlv.Request_Transmission_Policy.value  Value
  Unsigned 32-bit integer
  value for type=150
wimaxasncp.tlv.Reservation_Action  Reservation Action
  Byte array
  type=151
wimaxasncp.tlv.Reservation_Action.value  Value
  Unsigned 16-bit integer
  value for type=151
wimaxasncp.tlv.Reservation_Result  Reservation Result
  Byte array
  type=152
wimaxasncp.tlv.Reservation_Result.value  Value
  Unsigned 16-bit integer
  value for type=152
wimaxasncp.tlv.Response_Code  Response Code
  Byte array
  type=153
wimaxasncp.tlv.Response_Code.value  Value
  Unsigned 8-bit integer
  value for type=153
wimaxasncp.tlv.Result_Code  Result Code
  Byte array
  type=154
wimaxasncp.tlv.Result_Code.value  Value
  Unsigned 8-bit integer
  value for type=154
wimaxasncp.tlv.Round_Trip_Delay  Round Trip Delay
  Byte array
  type=156
wimaxasncp.tlv.Round_Trip_Delay.value  Value
  Unsigned 8-bit integer
  value for type=156
wimaxasncp.tlv.RxPN_Counter  RxPN Counter
  Byte array
  type=166
```

```
wimaxasncp.tlv.RxPN_Counter.value  Value
    Unsigned 32-bit integer
    value for type=166
wimaxasncp.tlv.SAID  SAID
    Byte array
    type=169, TBD
wimaxasncp.tlv.SAID.value  Value
    Byte array
    value for type=169
wimaxasncp.tlv.SA_Descriptor  SA Descriptor
    Byte array
    type=170, Compound
wimaxasncp.tlv.SA_Index  SA Index
    Byte array
    type=171
wimaxasncp.tlv.SA_Index.value  Value
    Unsigned 32-bit integer
    value for type=171
wimaxasncp.tlv.SA_Service_Type  SA Service Type
    Byte array
    type=172
wimaxasncp.tlv.SA_Service_Type.value  Value
    Unsigned 8-bit integer
    value for type=172
wimaxasncp.tlv.SA_Type  SA Type
    Byte array
    type=173
wimaxasncp.tlv.SA_Type.value  Value
    Unsigned 8-bit integer
    value for type=173
wimaxasncp.tlv.SBC_Context  SBC Context
    Byte array
    type=174, TBD
wimaxasncp.tlv.SBC_Context.value  Value
    Byte array
    value for type=174
wimaxasncp.tlv.SDU_BSN_Map  SDU BSN Map
    Byte array
    type=175
wimaxasncp.tlv.SDU_BSN_Map.value  Value
    Byte array
    value for type=175
wimaxasncp.tlv.SDU_Info  SDU Info
    Byte array
    type=176, Compound
wimaxasncp.tlv.SDU_SN  SDU SN
    Byte array
    type=178
```

```
wimaxasncp.tlv.SDU_SN.value  Value
    Unsigned 32-bit integer
    value for type=178

wimaxasncp.tlv.SDU_Size  SDU Size
    Byte array
    type=177

wimaxasncp.tlv.SDU_Size.value  Value
    Unsigned 8-bit integer
    value for type=177

wimaxasncp.tlv.SFID  SFID
    Byte array
    type=184

wimaxasncp.tlv.SFID.value  Value
    Unsigned 32-bit integer
    value for type=184

wimaxasncp.tlv.SF_Classification  SF Classification
    Byte array
    type=183

wimaxasncp.tlv.SF_Classification.value  Value
    Unsigned 8-bit integer
    value for type=183

wimaxasncp.tlv.SF_Info  SF Info
    Byte array
    type=185, Compound

wimaxasncp.tlv.Service_Authorization_Code  Service Authorization Code
    Byte array
    type=181, TBD

wimaxasncp.tlv.Service_Authorization_Code.value  Value
    Byte array
    value for type=181

wimaxasncp.tlv.Service_Class_Name  Service Class Name
    Byte array
    type=179

wimaxasncp.tlv.Service_Class_Name.value  Value
    String
    value for type=179

wimaxasncp.tlv.Service_Level_Prediction  Service Level Prediction
    Byte array
    type=180

wimaxasncp.tlv.Service_Level_Prediction.value  Value
    Unsigned 8-bit integer
    value for type=180

wimaxasncp.tlv.Serving_Target_Indicator  Serving/Target Indicator
    Byte array
    type=182

wimaxasncp.tlv.Serving_Target_Indicator.value  Value
    Unsigned 8-bit integer
    value for type=182
```

```
wimaxasncp.tlv.Source_Identifier  Source Identifier
  Byte array
  type=65281

wimaxasncp.tlv.Source_Identifier.bsids_value  BS ID
  6-byte Hardware (MAC) Address
  value for type=65281

wimaxasncp.tlv.Source_Identifier.ipv4_value  IPv4 Address
  IPv4 address
  value for type=65281

wimaxasncp.tlv.Source_Identifier.ipv6_value  IPv6 Address
  IPv6 address
  value for type=65281

wimaxasncp.tlv.Spare_Capacity_Indicator  Spare Capacity Indicator
  Byte array
  type=186

wimaxasncp.tlv.Spare_Capacity_Indicator.value  Value
  Unsigned 16-bit integer
  value for type=186

wimaxasncp.tlv.TEK  TEK
  Byte array
  type=187

wimaxasncp.tlv.TEK.value  Value
  Byte array
  value for type=187

wimaxasncp.tlv.TEK_Lifetime  TEK Lifetime
  Byte array
  type=188

wimaxasncp.tlv.TEK_Lifetime.value  Value
  Unsigned 32-bit integer
  value for type=188

wimaxasncp.tlv.TEK_SN  TEK SN
  Byte array
  type=189

wimaxasncp.tlv.TEK_SN.value  Value
  Unsigned 8-bit integer
  value for type=189

wimaxasncp.tlv.Tolerated_Jitter  Tolerated Jitter
  Byte array
  type=190

wimaxasncp.tlv.Tolerated_Jitter.value  Value
  Unsigned 32-bit integer
  value for type=190

wimaxasncp.tlv.Total_Slots_DL  Total Slots DL
  Byte array
  type=191

wimaxasncp.tlv.Total_Slots_DL.value  Value
  Unsigned 16-bit integer
  value for type=191
```

```
wimaxasncp.tlv.Total_Slots_UL  Total Slots UL
    Byte array
    type=192

wimaxasncp.tlv.Total_Slots_UL.value  Value
    Unsigned 16-bit integer
    value for type=192

wimaxasncp.tlv.Traffic_Priority_QoS_Priority  Traffic Priority/QoS Priority
    Byte array
    type=193

wimaxasncp.tlv.Traffic_Priority_QoS_Priority.value  Value
    Unsigned 8-bit integer
    value for type=193

wimaxasncp.tlv.Tunnel_Endpoint  Tunnel Endpoint
    Byte array
    type=194

wimaxasncp.tlv.Tunnel_Endpoint.ipv4_value  IPv4 Address
    IPv4 address
    value for type=194

wimaxasncp.tlv.Tunnel_Endpoint.ipv6_value  IPv6 Address
    IPv6 address
    value for type=194

wimaxasncp.tlv.UCD_Setting  UCD Setting
    Byte array
    type=195, TBD

wimaxasncp.tlv.UCD_Setting.value  Value
    Byte array
    value for type=195

wimaxasncp.tlv.UGS_Data_Delivery_Service  UGS Data Delivery Service
    Byte array
    type=196, Compound

wimaxasncp.tlv.UL_PHY_Quality_Info  UL PHY Quality Info
    Byte array
    type=197, TBD

wimaxasncp.tlv.UL_PHY_Quality_Info.value  Value
    Byte array
    value for type=197

wimaxasncp.tlv.UL_PHY_Service_Level  UL PHY Service Level
    Byte array
    type=198, TBD

wimaxasncp.tlv.UL_PHY_Service_Level.value  Value
    Byte array
    value for type=198

wimaxasncp.tlv.Unknown  Unknown
    Byte array
    type=Unknown

wimaxasncp.tlv.Unknown.value  Value
    Byte array
    value for unknown type
```

```
wimaxasncp.tlv.Unsolicited_Grant_Interval  Unsolicited Grant Interval
  Byte array
  type=199

wimaxasncp.tlv.Unsolicited_Grant_Interval.value  Value
  Unsigned 16-bit integer
  value for type=199

wimaxasncp.tlv.Unsolicited_Polling_Interval  Unsolicited Polling Interval
  Byte array
  type=200

wimaxasncp.tlv.Unsolicited_Polling_Interval.value  Value
  Unsigned 16-bit integer
  value for type=200

wimaxasncp.tlv.VAAA_IP_Address  VAAA IP Address
  Byte array
  type=201

wimaxasncp.tlv.VAAA_IP_Address.ipv4_value  IPv4 Address
  IPv4 address
  value for type=201

wimaxasncp.tlv.VAAA_IP_Address.ipv6_value  IPv6 Address
  IPv6 address
  value for type=201

wimaxasncp.tlv.VAAA_Realm  VAAA Realm
  Byte array
  type=202

wimaxasncp.tlv.VAAA_Realm.value  Value
  String
  value for type=202

wimaxasncp.tlv.Vendor_Specific  Vendor Specific
  Byte array
  type=65535

wimaxasncp.tlv.Vendor_Specific.value  Value
  Byte array
  value for type=65535

wimaxasncp.tlv.Vendor_Specific.value.vendor_id  Vendor ID
  Unsigned 24-bit integer
  value component for type=65535

wimaxasncp.tlv.Vendor_Specific.value.vendor_rest_of_info  Rest of Info
  Byte array
  value component for type=65535

wimaxasncp.tlv.length  Length
  Unsigned 16-bit integer

wimaxasncp.tlv.type  Type
  Unsigned 16-bit integer

wimaxasncp.tlv_value_bitflags16  Value
  Unsigned 16-bit integer

wimaxasncp.tlv_value_bitflags32  Value
  Unsigned 32-bit integer
```

wimaxasncp.tlv\_value\_bytes Value  
Byte array

wimaxasncp.tlv\_value\_protocol Value  
Unsigned 16-bit integer

wimaxasncp.tlv\_value\_vendor\_id Vendor ID  
Unsigned 24-bit integer

wimaxasncp.transaction\_id Transaction ID  
Unsigned 16-bit integer

wimaxasncp.version Version  
Unsigned 8-bit integer

wps.encrypted_settings  Encrypted Settings
    Byte array
    Encrypted Settings

wps.encryption_type      Encryption Type
    Unsigned 16-bit integer
    Encryption Type

wps.encryption_type_flags  Encryption Type Flags
    Unsigned 16-bit integer
    Encryption Type Flags

wps.encryption_type_flags.aes  AES
    Unsigned 16-bit integer
    AES

wps.encryption_type_flags.none  None
    Unsigned 16-bit integer
    None

wps.encryption_type_flags.tkip  TKIP
    Unsigned 16-bit integer
    TKIP

wps.encryption_type_flags.wep  WEP
    Unsigned 16-bit integer
    WEP

wps.enrollee_nonce       Enrollee Nonce
    Byte array
    Enrollee Nonce

wps.feature_id           Feature ID
    Unsigned 32-bit integer
    Feature ID

wps.identity             Identity
    String
    Identity

wps.identity_proof       Identity Proof
    Byte array
    Identity Proof

wps.initialization_vector  Initialization Vector
    Byte array
    Initialization Vector

wps.key_identifier       Key Identifier
    Byte array
    Key Identifier

wps.key_lifetime         Key Lifetime
    Unsigned 32-bit integer
    Key Lifetime

wps.key_provided_automatically  Key Provided Automatically
    Unsigned 16-bit integer
    Key Provided Automatically

wps.key_wrap_authenticator  Key Wrap Authenticator
    Byte array
    Key Wrap Authenticator
```

```
wps.length Data Element Length
    Unsigned 16-bit integer
    Data Element Length

wps.mac_address MAC
    6-byte Hardware (MAC) Address
    MAC

wps.manufacturer Manufacturer
    String
    Manufacturer

wps.message_counter Message Counter
    Unsigned 64-bit integer
    Message Counter

wps.message_type Message Type
    Unsigned 8-bit integer
    Message Type

wps.model_name Model Name
    String
    Model Name

wps.model_number Model Number
    String
    Model Number

wps.network_index Network Index
    Unsigned 8-bit integer
    Network Index

wps.network_key Network Key
    Byte array
    Network Key

wps.network_key_index Network Key Index
    Unsigned 8-bit integer
    Network Key Index

wps.new_device_name New Device Name
    Byte array
    New Device Name

wps.new_password New Password
    Byte array
    New Password

wps.oob_device_password OOB Device Password
    Byte array
    OOB Device Password

wps.os_version OS Version
    Unsigned 32-bit integer
    OS Version

wps.permitted_config_methods Permitted COnfig Methods
    Unsigned 16-bit integer
    Permitted COnfig Methods

wps.portable_device Portable Device
    Unsigned 8-bit integer
    Portable Device
```

```
wps.power_level  Power Level
    Unsigned 8-bit integer
    Power Level

wps.primary_device_type  Primary Device Type
    Byte array
    Primary Device Type

wps.primary_device_type.category  Category
    Unsigned 16-bit integer
    Category

wps.primary_device_type.oui  OUI
    Byte array
    OUI

wps.primary_device_type.subcategory  Subcategory
    Unsigned 16-bit integer
    Subcategory

wps.psk_current  PSK Current
    Unsigned 8-bit integer
    PSK Current

wps.psk_max  PSK Max
    Unsigned 8-bit integer
    PSK Max

wps.public_key  Public Key
    Byte array
    Public Key

wps.public_key_hash  Public Key Hash
    Byte array
    Public Key Hash

wps.r_hash1  Registrar Hash 1
    Byte array
    Registrar Hash 1

wps.r_hash2  Registrar Hash 2
    Byte array
    Registrar Hash 2

wps.r_snonce1  Registrar Snonce1
    Byte array
    Registrar Snonce1

wps.r_snonce2  Registrar Snonce 2
    Byte array
    Registrar Snonce 2

wps.radio_enabled  Radio Enabled
    Unsigned 16-bit integer
    Radio Enabled

wps.reboot  Reboot
    Unsigned 16-bit integer
    Reboot

wps.registrar_current  Registrar current
    Unsigned 8-bit integer
    Registrar current
```

```
wps.registrar_established Registrar established
    Unsigned 16-bit integer
    Registrar established

wps.registrar_list Registrar list
    Byte array
    Registrar list

wps.registrar_max Registrar max
    Unsigned 8-bit integer
    Registrar max

wps.registrar_nonce Registrar Nonce
    Byte array
    Registrar Nonce

wps.rekey_key Rekey Key
    Byte array
    Rekey Key

wps.request_type Request Type
    Unsigned 8-bit integer
    Request Type

wps.response_type Response Type
    Unsigned 8-bit integer
    Response Type

wps.rf_bands RF Bands
    Unsigned 8-bit integer
    RF Bands

wps.secondary_device_type_list Secondary Device Type List
    Byte array
    Secondary Device Type List

wps.selected_registrar Selected Registrar
    Unsigned 16-bit integer
    Selected Registrar

wps.selected_registrar_config_methods Selected Registrar Config Methods
    Unsigned 16-bit integer
    Selected Registrar Config Methods

wps.serial_number Serial Number
    Byte array
    Serial Number

wps.ssid SSID
    String
    SSID

wps.total_networks Total Networks
    Unsigned 8-bit integer
    Total Networks

wps.type Data Element Type
    Unsigned 16-bit integer
    Data Element Type

wps.uuid_e UUID Enrollee
    Byte array
    UUID Enrollee
```

```
wps.uuid_r    UUID Registrar
              Byte array
              UUID Registrar

wps.vendor_extension  Vendor Extension
              Byte array
              Vendor Extension

wps.version    Version
              Unsigned 8-bit integer
              Version

wps.weptransmitkey  WEP Transmit Key
              Unsigned 8-bit integer
              WEP Transmit Key

wps.wifi_protected_setup_state  Wifi Protected Setup State
              Unsigned 8-bit integer
              Wifi Protected Setup State

wps.x509_certificate  X509 Certificate
              Byte array
              X509 Certificate

wps.x509_certificate_request  X509 Certificate Request
              Byte array
              X509 Certificate Request
```

**Windows 2000 DNS (dnsserver)**

```
dnsserver.opnum  Operation
                 Unsigned 16-bit integer
                 Operation

dnsserver.rc     Return code
                 Unsigned 32-bit integer
                 Return code

**Wireless Session Protocol (wsp)**

```
wsp.TID         Transaction ID
                 Unsigned 8-bit integer
                 WSP Transaction ID (for connectionless WSP)

wsp.address     Address Record
                 Unsigned 32-bit integer
                 Address Record

wsp.address.bearer_type  Bearer Type
                 Unsigned 8-bit integer
                 Bearer Type

wsp.address.flags  Flags/Length
                 Unsigned 8-bit integer
                 Address Flags/Length
```

```
wsp.address.flags.bearer_type_included  Bearer Type Included
Boolean
Address bearer type included

wsp.address.flags.length  Address Length
Unsigned 8-bit integer
Address Length

wsp.address.flags.port_number_included  Port Number Included
Boolean
Address port number included

wsp.address.ipv4  IPv4 Address
IPv4 address
Address (IPv4)

wsp.address.ipv6  IPv6 Address
IPv6 address
Address (IPv6)

wsp.address.port  Port Number
Unsigned 16-bit integer
Port Number

wsp.address.unknown  Address
Byte array
Address (unknown)

wsp.capabilities  Capabilities
No value
Capabilities

wsp.capabilities.length  Capabilities Length
Unsigned 32-bit integer
Length of Capabilities field (bytes)

wsp.capability.aliases  Aliases
Byte array
Aliases

wsp.capability.client_message_size  Client Message Size
Unsigned 8-bit integer
Client Message size (bytes)

wsp.capability.client_sdu_size  Client SDU Size
Unsigned 8-bit integer
Client Service Data Unit size (bytes)

wsp.capability.code_pages  Header Code Pages
String
Header Code Pages

wsp.capability.extended_methods  Extended Methods
String
Extended Methods

wsp.capability.method_mor  Method MOR
Unsigned 8-bit integer
Method MOR

wsp.capability.protocol_opt  Protocol Options
String
Protocol Options
```

wsp.capability.protocol\_option.ack\_headers Acknowledgement headers  
Boolean  
If set, this CO-WSP session supports Acknowledgement headers

wsp.capability.protocol\_option.confirmed\_push Confirmed Push facility  
Boolean  
If set, this CO-WSP session supports the Confirmed Push facility

wsp.capability.protocol\_option.large\_data\_transfer Large data transfer  
Boolean  
If set, this CO-WSP session supports Large data transfer

wsp.capability.protocol\_option.push Push facility  
Boolean  
If set, this CO-WSP session supports the Push facility

wsp.capability.protocol\_option.session\_resume Session Resume facility  
Boolean  
If set, this CO-WSP session supports the Session Resume facility

wsp.capability.push\_mor Push MOR  
Unsigned 8-bit integer  
Push MOR

wsp.capability.server\_message\_size Server Message Size  
Unsigned 8-bit integer  
Server Message size (bytes)

wsp.capability.server\_sdu\_size Server SDU Size  
Unsigned 8-bit integer  
Server Service Data Unit size (bytes)

wsp.code\_page Switching to WSP header code-page  
Unsigned 8-bit integer  
Header code-page shift code

wsp.header.accept Accept  
String  
WSP header Accept

wsp.header.accept\_application Accept-Application  
String  
WSP header Accept-Application

wsp.header.if_range      If-Range
    String
    WSP header If-Range
wsp.header.if_unmodified_since  If-Unmodified-Since
    String
    WSP header If-Unmodified-Since
wsp.header.initiator_uri  Initiator-Uri
    String
    WSP header Initiator-Uri
wsp.header.last_modified  Last-Modified
    String
    WSP header Last-Modified
wsp.header.location      Location
    String
    WSP header Location
wsp.header.max_forwards  Max-Forwards
    String
    WSP header Max-Forwards
wsp.header.name          Header name
    String
    Name of the WSP header
wsp.header.pragma        Pragma
    String
    WSP header Pragma
wsp.header.profile        Profile
    String
    WSP header Profile
wsp.header.profile_diff  Profile-Diff
    String
    WSP header Profile-Diff
wsp.header.profile_warning  Profile-Warning
    String
    WSP header Profile-Warning
wsp.header.proxy_authenticate  Proxy-Authenticate
    String
    WSP header Proxy-Authenticate
wsp.header.proxy_authenticate.realm  Authentication Realm
    String
    WSP header Proxy-Authenticate: used realm
wsp.header.proxy_authenticate.scheme  Authentication Scheme
    String
    WSP header Proxy-Authenticate: used scheme
wsp.header.proxy_authorization  Proxy-Authorization
    String
    WSP header Proxy-Authorization
```

```
wsp.header.proxy_authorization.password Password
String
WSP header Proxy-Authorization: password for basic authorization
wsp.header.proxy_authorization.scheme Authorization Scheme
String
WSP header Proxy-Authorization: used scheme
wsp.header.proxy_authorization.user_id User-id
String
WSP header Proxy-Authorization: user ID for basic authorization
wsp.header.public Public
String
WSP header Public
wsp.header.push_flag Push-Flag
String
WSP header Push-Flag
wsp.header.push_flag.authenticated Initiator URI is authenticated
Unsigned 8-bit integer
The X-Wap-Initiator-URI has been authenticated.
wsp.header.push_flag.last Last push message
Unsigned 8-bit integer
Indicates whether this is the last push message.
wsp.header.push_flag.trusted Content is trusted
Unsigned 8-bit integer
The push content is trusted.
wsp.header.range Range
String
WSP header Range
wsp.header.range.first_byte_pos First-byte-position
Unsigned 32-bit integer
WSP header Range: position of first byte
wsp.header.range.last_byte_pos Last-byte-position
Unsigned 32-bit integer
WSP header Range: position of last byte
wsp.header.range.suffix_length Suffix-length
Unsigned 32-bit integer
WSP header Range: length of the suffix
wsp.header.referer Referer
String
WSP header Referer
wsp.header.retry_after Retry-After
String
WSP header Retry-After
wsp.header.server Server
String
WSP header Server
wsp.header.set_cookie Set-Cookie
String
WSP header Set-Cookie
```

```
wsp.header.te      Te
  String
  WSP header Te

wsp.header.trailer Trailer
  String
  WSP header Trailer

wsp.header.transfer_encoding Transfer-Encoding
  String
  WSP header Transfer-Encoding

wsp.header.upgrade Upgrade
  String
  WSP header Upgrade

wsp.header.user_agent User-Agent
  String
  WSP header User-Agent

wsp.header.vary    Vary
  String
  WSP header Vary

wsp.header.via     Via
  String
  WSP header Via

wsp.header.warning Warning
  String
  WSP header Warning

wsp.header.warning.agent Warning agent
  String
  WSP header Warning agent

wsp.header.warning.code Warning code
  Unsigned 8-bit integer
  WSP header Warning code

wsp.header.warning.text Warning text
  String
  WSP header Warning text

wsp.header.www_authenticate Www-Authenticate
  String
  WSP header Www-Authenticate

wsp.header.www_authenticate.realm Authentication Realm
  String
  WSP header WWW-Authenticate: used realm

wsp.header.www_authenticate.scheme Authentication Scheme
  String
  WSP header WWW-Authenticate: used scheme

String
WSP Openwave header x-up-proxy-trust
wsp.header.x_up_1.x_up_proxy_uplink_version  x-up-proxy-uplink-version
String
WSP Openwave header x-up-proxy-uplink-version
wsp.header.x_wap_application_id  X-Wap-Application-Id
String
WSP header X-Wap-Application-Id
wsp.header.x_wap_security  X-Wap-Security
String
WSP header X-Wap-Security
wsp.header.x_wap_tod  X-Wap-Tod
String
WSP header X-Wap-Tod
wsp.headers  Headers
No value
Headers
wsp.headers_length  Headers Length
Unsigned 32-bit integer
Length of Headers field (bytes)
wsp.multipart  Part
Unsigned 32-bit integer
MIME part of multipart data.
wsp.multipart.data  Data in this part
No value
The data of 1 MIME-multipart part.
```

```
wsp.parameter.charset  Charset
    String
    Charset parameter

wsp.parameter.comment  Comment
    String
    Comment parameter

wsp.parameter.domain   Domain
    String
    Domain parameter

wsp.parameter.filename  Filename
    String
    Filename parameter

wsp.parameter.level    Level
    String
    Level parameter

wsp.parameter.mac      MAC
    String
    MAC parameter (Content-Type: application/vnd.wap.connectivity-wbxml)

wsp.parameter.name     Name
    String
    Name parameter

wsp.parameter.path     Path
    String
    Path parameter

wsp.parameter.q        Q
    String
    Q parameter

wsp.parameter.sec      SEC
    Unsigned 8-bit integer
    SEC parameter (Content-Type: application/vnd.wap.connectivity-wbxml)

wsp.parameter.size     Size
    Unsigned 32-bit integer
    Size parameter

wsp.parameter.start    Start
    String
    Start parameter

wsp.parameter.start_info  Start-info
    String
    Start-info parameter

wsp.parameter.type     Type
    Unsigned 32-bit integer
    Type parameter

wsp.parameter.upart.type  Type
    String
    Multipart type parameter

wsp.pdu_type           PDU Type
    Unsigned 8-bit integer
    PDU Type
```

wsp.post.data Data (Post)  
No value  
Post Data

wsp.push.data Push Data  
No value  
Push Data

wsp.redirect.addresses Redirect Addresses  
No value  
List of Redirect Addresses

wsp.redirect.flags Flags  
Unsigned 8-bit integer  
Redirect Flags

wsp.redirect.flags.permanent Permanent Redirect  
Boolean  
Permanent Redirect

wsp.redirect.flags.reuse\_security\_session Reuse Security Session  
Boolean  
If set, the existing Security Session may be reused

wsp.reply.data Data  
No value  
Data

wsp.reply.status Status  
Unsigned 8-bit integer  
Reply Status

wsp.server.session\_id Server Session ID  
Unsigned 32-bit integer  
Server Session ID

wsp.uri URI  
String  
URI

wsp.uri\_length URI Length  
Unsigned 32-bit integer  
Length of URI field

wsp.version.major Version (Major)  
Unsigned 8-bit integer  
Version (Major)

wsp.version.minor Version (Minor)  
Unsigned 8-bit integer  
Version (Minor)

#### **Wireless Transaction Protocol (wtp)**

wtp.RID Re-transmission Indicator  
Boolean  
Re-transmission Indicator

wtp.TID Transaction ID  
Unsigned 16-bit integer  
Transaction ID

```
wtp.TID.response  TID Response
  Boolean
  TID Response

wtp.abort.reason.provider  Abort Reason
  Unsigned 8-bit integer
  Abort Reason

wtp.abort.reason.user  Abort Reason
  Unsigned 8-bit integer
  Abort Reason

wtp.abort.type  Abort Type
  Unsigned 8-bit integer
  Abort Type

wtp.ack.tvetok  Tve/Tok flag
  Boolean
  Tve/Tok flag

wtp.continue_flag  Continue Flag
  Boolean
  Continue Flag

wtp.fragment  WTP Fragment
  Frame number
  WTP Fragment

wtp.fragment.error  Defragmentation error
  Frame number
  Defragmentation error due to illegal fragments

wtp.fragment.multipletails  Multiple tail fragments found
  Boolean
  Several tails were found when defragmenting the packet

wtp.fragment.overlap  Fragment overlap
  Boolean
  Fragment overlaps with other fragments

wtp.fragment.overlap.conflict  Conflicting data in fragment overlap
  Boolean
  Overlapping fragments contained conflicting data

wtp.fragment.toolongfragment  Fragment too long
  Boolean
  Fragment contained data past end of packet

wtp.fragments  WTP Fragments
  No value
  WTP Fragments

wtp.header.TIDNew  TIDNew
  Boolean
  TIDNew

wtp.header.UP  U/P flag
  Boolean
  U/P Flag

wtp.header.missing_packets  Missing Packets
  Unsigned 8-bit integer
  Missing Packets
```

```
wtp.header.sequence  Packet Sequence Number
    Unsigned 8-bit integer
    Packet Sequence Number

wtp.header.version  Version
    Unsigned 8-bit integer
    Version

wtp.header_data  Data
    Byte array
    Data

wtp.header_variable_part  Header: Variable part
    Byte array
    Variable part of the header

wtp.inv.reserved  Reserved
    Unsigned 8-bit integer
    Reserved

wtp.inv.transaction_class  Transaction Class
    Unsigned 8-bit integer
    Transaction Class

wtp.pdu_type  PDU Type
    Unsigned 8-bit integer
    PDU Type

wtp.reassembled.in  Reassembled in
    Frame number
    WTP fragments are reassembled in the given packet

wtp.sub_pdu_size  Sub PDU size
    Unsigned 16-bit integer
    Size of Sub-PDU (bytes)

wtp.tpi  TPI
    Unsigned 8-bit integer
    Identification of the Transport Information Item

wtp.tpi.info  Information
    No value
    The information being send by this TPI

wtp.tpi.opt  Option
    Unsigned 8-bit integer
    The given option for this TPI

wtp.tpi.opt.val  Option Value
    No value
    The value that is supplied with this option

wtp.tpi.psn  Packet sequence number
    Unsigned 8-bit integer
    Sequence number of this packet

wtp.trailer_flags  Trailer Flags
    Unsigned 8-bit integer
    Trailer Flags
```

**Wireless Transport Layer Security (wtls)**

```
wtls.alert Alert
  No value
  Alert

wtls.alert.description Description
  Unsigned 8-bit integer
  Description

wtls.alert.level Level
  Unsigned 8-bit integer
  Level

wtls.handshake Handshake
  Unsigned 8-bit integer
  Handshake

wtls.handshake.certificate Certificate
  No value
  Certificate

wtls.handshake.certificate.after Valid not after
  Date/Time stamp
  Valid not after

wtls.handshake.certificate.before Valid not before
  Date/Time stamp
  Valid not before

wtls.handshake.certificate.issuer.charset Charset
  Unsigned 16-bit integer
  Charset

wtls.handshake.certificate.issuer.name Name
  String
  Name

wtls.handshake.certificate.issuer.size Size
  Unsigned 8-bit integer
  Size

wtls.handshake.certificate.issuer.type Issuer
  Unsigned 8-bit integer
  Issuer

wtls.handshake.certificate.parameter Parameter Set
  String
  Parameter Set

wtls.handshake.certificate.parameter_index Parameter Index
  Unsigned 8-bit integer
  Parameter Index

wtls.handshake.certificate.public.type Public Key Type
  Unsigned 8-bit integer
  Public Key Type

wtls.handshake.certificate.rsa.exponent RSA Exponent Size
  Unsigned 32-bit integer
  RSA Exponent Size
```

```
wtls.handshake.certificate.rsa.modules  RSA Modulus Size
    Unsigned 32-bit integer
    RSA Modulus Size

wtls.handshake.certificate.signature.signature  Signature Size
    Unsigned 32-bit integer
    Signature Size

wtls.handshake.certificate.signature.type  Signature Type
    Unsigned 8-bit integer
    Signature Type

wtls.handshake.certificate.subject.charset  Charset
    Unsigned 16-bit integer
    Charset

wtls.handshake.certificate.subject.name  Name
    String
    Name

wtls.handshake.certificate.subject.size  Size
    Unsigned 8-bit integer
    Size

wtls.handshake.certificate.subject.type  Subject
    Unsigned 8-bit integer
    Subject

wtls.handshake.certificate.type  Type
    Unsigned 8-bit integer
    Type

wtls.handshake.certificate.version  Version
    Unsigned 8-bit integer
    Version

wtls.handshake.certificates  Certificates
    No value
    Certificates

wtls.handshake.client_hello  Client Hello
    No value
    Client Hello

wtls.handshake.client_hello.cipher  Cipher
    String
    Cipher

wtls.handshake.client_hello.ciphers  Cipher Suites
    No value
    Cipher Suite

wtls.handshake.client_hello.client_keys_id  Client Keys
    No value
    Client Keys

wtls.handshake.client_hello.client_keys_len  Length
    Unsigned 16-bit integer
    Length

wtls.handshake.client_hello.comp_methods  Compression Methods
    No value
    Compression Methods
```

```
wtls.handshake.client_hello.compression  Compression
    Unsigned 8-bit integer
    Compression

wtls.handshake.client_hello.gmt  Time GMT
    Date/Time stamp
    Time GMT

wtls.handshake.client_hello.ident_charset  Identifier CharSet
    Unsigned 16-bit integer
    Identifier CharSet

wtls.handshake.client_hello.ident_name  Identifier Name
    String
    Identifier Name

wtls.handshake.client_hello.ident_size  Identifier Size
    Unsigned 8-bit integer
    Identifier Size

wtls.handshake.client_hello.ident_type  Identifier Type
    Unsigned 8-bit integer
    Identifier Type

wtls.handshake.client_hello.identifier  Identifier
    No value
    Identifier

wtls.handshake.client_hello.key.key_exchange  Key Exchange
    Unsigned 8-bit integer
    Key Exchange

wtls.handshake.client_hello.key.key_exchange.suite  Suite
    Unsigned 8-bit integer
    Suite

wtls.handshake.client_hello.parameter  Parameter Set
    String
    Parameter Set

    Signed 32-bit integer
    rtse.INTEGER
```

**X.25 (x.25)**

```
x.25.a  A Bit
    Boolean
    Address Bit

x.25.d  D Bit
    Boolean
    Delivery Confirmation Bit

x.25.gfi  GFI
    Unsigned 16-bit integer
    General format identifier

x.25.lcn  Logical Channel
    Unsigned 16-bit integer
    Logical Channel Number

x.25.m  M Bit
    Boolean
    More Bit

x.25.mod  Modulo
    Unsigned 16-bit integer
    Specifies whether the frame is modulo 8 or 128

x.25.p_r  P(R)
    Unsigned 8-bit integer
    Packet Receive Sequence Number

x.25.p_s  P(S)
    Unsigned 8-bit integer
    Packet Send Sequence Number

x.25.q  Q Bit
    Boolean
    Qualifier Bit
```

x.25.type Packet Type  
Unsigned 8-bit integer  
Packet Type

x25.fragment X.25 Fragment  
Frame number  
X25 Fragment

x25.fragment.error Defragmentation error  
Frame number  
Defragmentation error due to illegal fragments

x25.fragment.multipletails Multiple tail fragments found  
Boolean  
Several tails were found when defragmenting the packet

x25.fragment.overlap Fragment overlap  
Boolean  
Fragment overlaps with other fragments

x25.fragment.overlap.conflict Conflicting data in fragment overlap  
Boolean  
Overlapping fragments contained conflicting data

x25.fragment.toolongfragment Fragment too long  
Boolean  
Fragment contained data past end of packet

x25.fragments X.25 Fragments  
No value  
X.25 Fragments

**X.25 over TCP (xot)**

xot.length Length  
Unsigned 16-bit integer  
Length of X.25 over TCP packet

xot.version Version  
Unsigned 16-bit integer  
Version of X.25 over TCP protocol

**X.29 (x.29)**

x29.error\_type Error type  
Unsigned 8-bit integer  
X.29 error PAD message error type

x29.inv\_msg\_code Invalid message code  
Unsigned 8-bit integer  
X.29 Error PAD message invalid message code

x29.msg\_code Message code  
Unsigned 8-bit integer  
X.29 PAD message code

**Xyplex (xyplex)**

```
xyplex.pad  Pad
  Unsigned 8-bit integer
  Padding

xyplex.reply  Registration Reply
  Unsigned 16-bit integer
  Registration reply

xyplex.reserved  Reserved field
  Unsigned 16-bit integer
  Reserved field

xyplex.return_port  Return Port
  Unsigned 16-bit integer
  Return port

xyplex.server_port  Server Port
  Unsigned 16-bit integer
  Server port

xyplex.type  Type
  Unsigned 8-bit integer
  Protocol type
```

**Yahoo Messenger Protocol (yhoo)**

```
yhoo.connection_id  Connection ID
  Unsigned 32-bit integer
  Connection ID

yhoo.content  Content
  String
  Data portion of the packet

yhoo.len  Packet Length
  Unsigned 32-bit integer
  Packet Length

yhoo.magic_id  Magic ID
  Unsigned 32-bit integer
  Magic ID

yhoo.msgtype  Message Type
  Unsigned 32-bit integer
  Message Type Flags

yhoo.nick1  Real Nick (nick1)
  String
  Real Nick (nick1)

yhoo.nick2  Active Nick (nick2)
  String
  Active Nick (nick2)

yhoo.service  Service Type
  Unsigned 32-bit integer
  Service Type

yhoo.unknown1  Unknown 1
  Unsigned 32-bit integer
  Unknown 1
```

```
yhoo.version  Version
              String
              Packet version identifier
```

#### **Yahoo YMSG Messenger Protocol (ymsg)**

```
ymsg.content  Content
              String
              Data portion of the packet

ymsg.content-line  Content-line
                  String
                  Data portion of the packet

ymsg.content-line.key  Key
                       String
                       Content line key

ymsg.content-line.value  Value
                          String
                          Content line value

ymsg.len  Packet Length
          Unsigned 16-bit integer
          Packet Length

ymsg.service  Service
              Unsigned 16-bit integer
              Service Type

ymsg.session_id  Session ID
                 Unsigned 32-bit integer
                 Connection ID

ymsg.status  Status
             Unsigned 32-bit integer
             Message Type Flags

ymsg.version  Version
              Unsigned 16-bit integer
              Packet version identifier
```

#### **Yellow Pages Bind (ypbind)**

```
ypbind.addr  IP Addr
             IPv4 address
             IP Address of server

ypbind.domain  Domain
              String
              Name of the NIS/YP Domain

ypbind.error  Error
              Unsigned 32-bit integer
              YPBIND Error code

ypbind.port  Port
            Unsigned 32-bit integer
            Port to use
```

```
yplibind.procedure_v1  V1 Procedure
    Unsigned 32-bit integer
    V1 Procedure

yplibind.procedure_v2  V2 Procedure
    Unsigned 32-bit integer
    V2 Procedure

yplibind.resp_type     Response Type
    Unsigned 32-bit integer
    Response type

yplibind.setdom.version Version
    Unsigned 32-bit integer
    Version of setdom
```

### **Yellow Pages Passwd (yppasswd)**

```
yppasswd.newpw  newpw
    No value
    New passwd entry

yppasswd.newpw.dir  dir
    String
    Home Directory

yppasswd.newpw.gecos  gecos
    String
    In real life name

yppasswd.newpw.gid  gid
    Unsigned 32-bit integer
    GroupID

yppasswd.newpw.name  name
    String
    Username

yppasswd.newpw.passwd  passwd
    String
    Encrypted passwd

yppasswd.newpw.shell  shell
    String
    Default shell

yppasswd.newpw.uid  uid
    Unsigned 32-bit integer
    UserID

yppasswd.oldpass  oldpass
    String
    Old encrypted password

yppasswd.procedure_v1  V1 Procedure
    Unsigned 32-bit integer
    V1 Procedure

yppasswd.status  status
    Unsigned 32-bit integer
    YPPasswd update status
```

**Yellow Pages Service (ypserv)**

```
ypserv.domain  Domain
  String
  Domain

ypserv.key     Key
  String
  Key

ypserv.map     Map Name
  String
  Map Name

ypserv.map_parms  YP Map Parameters
  No value
  YP Map Parameters

ypserv.more    More
  Boolean
  More

ypserv.ordernum  Order Number
  Unsigned 32-bit integer
  Order Number for XFR

ypserv.peer    Peer Name
  String
  Peer Name

ypserv.port     Port
  Unsigned 32-bit integer
  Port to use for XFR Callback

ypserv.procedure_v1  V1 Procedure
  Unsigned 32-bit integer
  V1 Procedure

ypserv.procedure_v2  V2 Procedure
  Unsigned 32-bit integer
  V2 Procedure

ypserv.prog     Program Number
  Unsigned 32-bit integer
  Program Number to use for XFR Callback

ypserv.servesdomain  Serves Domain
  Boolean
  Serves Domain

ypserv.status   Status
  Signed 32-bit integer
  Status

ypserv.transid  Host Transport ID
  IPv4 address
  Host Transport ID to use for XFR Callback

ypserv.value    Value
  String
  Value
```

```
ypserv.xfrstat  Xfrstat
                Signed 32-bit integer
                Xfrstat
```

**Yellow Pages Transfer (ypxfr)**

```
ypxfr.procedure_v1  V1 Procedure
                   Unsigned 32-bit integer
                   V1 Procedure
```

**Zebra Protocol (zebra)**

```
zebra.bandwidth  Bandwidth
                 Unsigned 32-bit integer
                 Bandwidth of interface

zebra.command    Command
                 Unsigned 8-bit integer
                 ZEBRA command

zebra.dest4      Destination
                 IPv4 address
                 Destination IPv4 field

zebra.dest6      Destination
                 IPv6 address
                 Destination IPv6 field

zebra.distance   Distance
                 Unsigned 8-bit integer
                 Distance of route

zebra.family     Family
                 Unsigned 32-bit integer
                 Family of IP address

zebra.index      Index
                 Unsigned 32-bit integer
                 Index of interface

zebra.indexnum   Index Number
                 Unsigned 8-bit integer
                 Number of indices for route

zebra.interface  Interface
                 String
                 Interface name of ZEBRA request

zebra.intflags   Flags
                 Unsigned 32-bit integer
                 Flags of interface

zebra.len        Length
                 Unsigned 16-bit integer
                 Length of ZEBRA request

zebra.message    Message
                 Unsigned 8-bit integer
                 Message type of route
```

```
zebra.message.distance  Message Distance
    Boolean
    Message contains distance
zebra.message.index    Message Index
    Boolean
    Message contains index
zebra.message.metric   Message Metric
    Boolean
    Message contains metric
zebra.message.nexthop  Message Nexthop
    Boolean
    Message contains nexthop
zebra.metric           Metric
    Unsigned 32-bit integer
    Metric of interface or route
zebra.mtu             MTU
    Unsigned 32-bit integer
    MTU of interface
zebra.nexthop4        Nexthop
    IPv4 address
    Nethop IPv4 field of route
zebra.nexthop6        Nexthop
    IPv6 address
    Nethop IPv6 field of route
zebra.nexthopnum      Nexthop Number
    Unsigned 8-bit integer
    Number of nexthops in route
zebra.prefix4         Prefix
    IPv4 address
    Prefix IPv4
zebra.prefix6         Prefix
    IPv6 address
    Prefix IPv6
zebra.prefixlen       Prefix length
    Unsigned 32-bit integer
    Prefix length
zebra.request         Request
    Boolean
    TRUE if ZEBRA request
zebra.rtflags         Flags
    Unsigned 8-bit integer
    Flags of route
zebra.type            Type
    Unsigned 8-bit integer
    Type of route
```

**Zone Information Protocol (zip)**

```
zip.atp_function  Function
    Unsigned 8-bit integer

zip.count  Count
    Unsigned 16-bit integer

zip.default_zone  Default zone
    String

zip.flags  Flags
    Boolean

zip.flags.only_one_zone  Only one zone
    Boolean

zip.flags.use_broadcast  Use broadcast
    Boolean

zip.flags.zone_invalid  Zone invalid
    Boolean

zip.function  Function
    Unsigned 8-bit integer
    ZIP function

zip.last_flag  Last Flag
    Boolean
    Non zero if contains last zone name in the zone list

zip.multicast_address  Multicast address
    Byte array
    Multicast address

zip.multicast_length  Multicast length
    Unsigned 8-bit integer
    Multicast address length

zip.network  Network
    Unsigned 16-bit integer

zip.network_count  Count
    Unsigned 8-bit integer

zip.network_end  Network end
    Unsigned 16-bit integer

zip.network_start  Network start
    Unsigned 16-bit integer

zip.start_index  Start index
    Unsigned 16-bit integer

zip.zero_value  Pad (0)
    Byte array
    Pad

zip.zone_name  Zone
    String
```

**eDonkey Protocol (edonkey)**

```
edonkey.client_hash  Client Hash
  Byte array
  eDonkey Client Hash

edonkey.clientid    Client ID
  IPv4 address
  eDonkey Client ID

edonkey.clientinfo  eDonkey Client Info
  No value
  eDonkey Client Info

edonkey.directory  Directory
  String
  eDonkey Directory

edonkey.emule.aich_hash  AICH Hash
  Byte array
  eMule AICH Hash

edonkey.emule.aich_hash_id  AICH Hash ID
  Unsigned 16-bit integer
  eMule AICH Hash ID

edonkey.emule.aich_partnum  Part Number
  Unsigned 16-bit integer
  eMule AICH Part Number

edonkey.emule.aich_root_hash  AICH Root Hash
  Byte array
  eMule AICH Root Hash

edonkey.emule.multipacket_entry  eMule MultiPacket Entry
  No value
  eMule MultiPacket Entry

edonkey.emule.multipacket_opcode  MultiPacket Opcode
  Unsigned 8-bit integer
  eMule MultiPacket Opcode

edonkey.emule.public_key  Public Key
  Byte array
  eMule Public Key

edonkey.emule.signature  Signature
  Byte array
  eMule Signature

edonkey.emule.source_count  Completed Sources Count
  Unsigned 16-bit integer
  eMule Completed Sources Count

edonkey.emule.zlib  Compressed Data
  No value
  eMule Compressed Data

edonkey.file_hash  File Hash
  Byte array
  eDonkey File Hash
```

```
edonkey.file_status  File Status
    Byte array
    eDonkey File Status

edonkey.fileinfo    eDonkey File Info
    No value
    eDonkey File Info

edonkey.hash        Hash
    Byte array
    eDonkey Hash

edonkey.ip          IP
    IPv4 address
    eDonkey IP

edonkey.kademlia    Kademlia Packet
    Unsigned 8-bit integer
    Kademlia Packet Type

edonkey.kademlia.hash  Kademlia Hash
    Byte array
    Kademlia Hash

edonkey.kademlia.ip  IP
    IPv4 address
    eDonkey IP

edonkey.kademlia.peer  Kademlia Peer
    No value
    Kademlia Peer

edonkey.kademlia.peer.hash  Peer Hash
    Byte array
    Kademlia Peer Hash

edonkey.kademlia.peer.type  Kademlia PeerType
    Unsigned 8-bit integer
    Kademlia Peer Type

edonkey.kademlia.search.condition  Search Condition
    Unsigned 8-bit integer
    Kademlia Search Condition

edonkey.kademlia.search.condition.argument.uint32  32bit Argument
    Unsigned 32-bit integer
    Kademlia Search Condition Argument 32bit Value

edonkey.kademlia.search.condition.argument.uint64  64bit Argument
    Unsigned 64-bit integer
    Kademlia Search Condition Argument 64bit Value

edonkey.kademlia.tag.name  Tag Name
    String
    Kademlia Tag Name String

edonkey.kademlia.tag.name.length  Tag Name Length
    Unsigned 16-bit integer
    Kademlia Tag Name String Length

edonkey.kademlia.tag.type  Tag Type
    Unsigned 8-bit integer
    Kademlia Tag Type
```

```
edonkey.kademlia.tag.value.bsob  Tag Value (BSOB)
    Byte array
    BSOB Tag Value

edonkey.kademlia.tag.value.float  Tag Value (Float)
    Float Tag Value

edonkey.kademlia.tag.value.hash  Tag Value (HASH)
    Byte array
    HASH Tag Value

edonkey.kademlia.tag.value.string  Tag Value (String)
    String
    String Tag Value

edonkey.kademlia.tag.value.uint16  Tag Value (UINT16)
    Unsigned 16-bit integer
    UINT16 Tag Value

edonkey.kademlia.tag.value.uint32  Tag Value (UINT32)
    Unsigned 32-bit integer
    UINT32 Tag Value

edonkey.kademlia.tag.value.uint64  Tag Value (UINT64)
    Unsigned 64-bit integer
    UINT64 Tag Value

edonkey.kademlia.tag.value.uint8   Tag Value (UINT8)
    Unsigned 8-bit integer
    UINT8 Tag Value

edonkey.kademlia.tcp_port  TCP Port
    Unsigned 16-bit integer
    Kademlia TCP Port

edonkey.kademlia.udp_port  UDP Port
    Unsigned 16-bit integer
    Kademlia UDP Port

edonkey.kademlia.unparsed  Kademlia unparsed data length
    Unsigned 16-bit integer
    Kademlia trailing data length

edonkey.message  eDonkey Message
    No value
    eDonkey Message

edonkey.message.length  Message Length
    Unsigned 32-bit integer
    eDonkey Message Length

edonkey.message.type  Message Type
    Unsigned 8-bit integer
    eDonkey Message Type

edonkey.metatag  eDonkey Meta Tag
    No value
    eDonkey Meta Tag

edonkey.metatag.id  Meta Tag ID
    Unsigned 8-bit integer
    eDonkey Meta Tag ID
```

```
edonkey.metatag.name  Meta Tag Name
String
eDonkey Meta Tag Name

edonkey.metatag.namesize  Meta Tag Name Size
Unsigned 16-bit integer
eDonkey Meta Tag Name Size

edonkey.metatag.type  Meta Tag Type
Unsigned 8-bit integer
eDonkey Meta Tag Type

edonkey.overnet.peer  Overnet Peer
No value
Overnet Peer

edonkey.part_count  Part Count
Unsigned 16-bit integer
eDonkey Part Count

edonkey.port  Port
Unsigned 16-bit integer
eDonkey Port

edonkey.protocol  Protocol
Unsigned 8-bit integer
eDonkey Protocol

edonkey.search  eDonkey Search
No value
eDonkey Search

edonkey.server_hash  Server Hash
Byte array
eDonkey Server Hash

edonkey.serverinfo  eDonkey Server Info
No value
eDonkey Server Info

edonkey.source  Source
No value
eDonkey File Source

edonkey.string  String
String
eDonkey String

edonkey.string_length  String Length
Unsigned 16-bit integer
eDonkey String Length

edonkey.unparsed  eDonkey unparsed data length
Unsigned 32-bit integer
eDonkey trailing or unparsed data length

emule_aich_hash_entry  AICH Hash Entry
No value
eMule AICH Hash Entry
```

**eXtensible Markup Language (xml)**

```
xml.attribute  Attribute
               String

xml.cdata      CDATA
               String

xml.comment    Comment
               String

xml.doctype    Doctype
               String

xml.dtdtag     DTD Tag
               String

xml.tag        Tag
               String

xml.unknown    Unknown
               String

xml.xmlpi      XMLPI
               String

xml.xmlpi.xml  xml.xmlpi.xml
               String

xml.xmlpi.xml.encoding  encoding
               String

xml.xmlpi.xml.standalone  standalone
               String

xml.xmlpi.xml.version  version
               String
```

**giFT Internet File Transfer (gift)**

```
gift.request   Request
               Boolean
               TRUE if giFT request

gift.response  Response
               Boolean
               TRUE if giFT response
```

**iFCP (ifcp)**

```
fcencap.crc    CRC
               Unsigned 32-bit integer

fcencap.framelen  Frame Length (in Words)
               Unsigned 16-bit integer

fcencap.framelenc  Frame Length (1's Complement)
               Unsigned 16-bit integer

fcencap.proto   Protocol
               Unsigned 8-bit integer
               Protocol
```

```
fcencap.protoc Protocol (1's Complement)
    Unsigned 8-bit integer
    Protocol (1's Complement)
fcencap.tsec Time (secs)
    Unsigned 32-bit integer
fcencap.tusec Time (fraction)
    Unsigned 32-bit integer
fcencap.version Version
    Unsigned 8-bit integer
fcencap.versionc Version (1's Complement)
    Unsigned 8-bit integer
ifcp.common_flags Flags
    Unsigned 8-bit integer
ifcp.common_flags.crcv CRCV
    Boolean
    Is the CRC field valid?
ifcp.encap_flagsc iFCP Encapsulation Flags (1's Complement)
    Unsigned 8-bit integer
ifcp.eof EOF
    Unsigned 8-bit integer
ifcp.eof_c EOF Compliment
    Unsigned 8-bit integer
ifcp.flags iFCP Flags
    Unsigned 8-bit integer
ifcp.flags.ses SES
    Boolean
    Is this a Session control frame
ifcp.flags.spc SPC
    Boolean
    Is frame part of link service
ifcp.flags.trp TRP
    Boolean
    Is address transparent mode enabled
ifcp.ls_command_acc Ls Command Acc
    Unsigned 8-bit integer
ifcp.sof SOF
    Unsigned 8-bit integer
ifcp.sof_c SOF Compliment
    Unsigned 8-bit integer
```

**iSCSI (iscsi)**

```
iscsi.I I
    Boolean
    Immediate delivery
```

```
iscsi.X X
  Boolean
  Command Retry

iscsi.ahs AHS
  Byte array
  Additional header segment

iscsi.ahs.bidir.length Bidirectional Read Data Length
  Unsigned 32-bit integer

iscsi.ahs.extended_cdb AHS Extended CDB
  Byte array

iscsi.ahs.length AHS Length
  Unsigned 16-bit integer
  Length of Additional header segment

iscsi.ahs.type AHS Type
  Unsigned 8-bit integer
  Type of Additional header segment

iscsi.ahs.unknown_blob Unknown AHS blob
  Byte array

iscsi.asyncevent AsyncEvent
  Unsigned 8-bit integer
  Async event type

iscsi.asynceventdata AsyncEventData
  Byte array
  Async Event Data

iscsi.bufferOffset BufferOffset
  Unsigned 32-bit integer
  Buffer offset

iscsi.cid CID
  Unsigned 16-bit integer
  Connection identifier

iscsi.cmdsn CmdSN
  Unsigned 32-bit integer
  Sequence number for this command

iscsi.data_in_frame Data In in
  Frame number
  The Data In for this transaction is in this frame

iscsi.data_out_frame Data Out in
  Frame number
  The Data Out for this transaction is in this frame

iscsi.datadigest DataDigest
  Byte array
  Data Digest

iscsi.datadigest32 DataDigest
  Unsigned 32-bit integer
  Data Digest
```

```
iscsi.datasegmentlength  DataSegmentLength
    Unsigned 32-bit integer
    Data segment length (bytes)

iscsi.datasn  DataSN
    Unsigned 32-bit integer
    Data sequence number

iscsi.desireddatalength  DesiredDataLength
    Unsigned 32-bit integer
    Desired data length (bytes)

iscsi.errorpdudata  ErrorPDUData
    Byte array
    Error PDU Data

iscsi.eventvendorcode  EventVendorCode
    Unsigned 8-bit integer
    Event vendor code

iscsi.expcmdsn  ExpCmdSN
    Unsigned 32-bit integer
    Next expected command sequence number

iscsi.expdatasn  ExpDataSN
    Unsigned 32-bit integer
    Next expected data sequence number

iscsi.expstatsn  ExpStatSN
    Unsigned 32-bit integer
    Next expected status sequence number

iscsi.flags  Flags
    Unsigned 8-bit integer
    Opcode specific flags

iscsi.headerdigest32  HeaderDigest
    Unsigned 32-bit integer
    Header Digest

iscsi.immediatedata  ImmediateData
    Byte array
    Immediate Data

iscsi.initcmdsn  InitCmdSN
    Unsigned 32-bit integer
    Initial command sequence number

iscsi.initiatorortasktag  InitiatorTaskTag
    Unsigned 32-bit integer
    Initiator's task tag

iscsi.initstatsn  InitStatSN
    Unsigned 32-bit integer
    Initial status sequence number

iscsi.isid  ISID
    Unsigned 16-bit integer
    Initiator part of session identifier

iscsi.isid.a  ISID_a
    Unsigned 8-bit integer
    Initiator part of session identifier - a
```

```
iscsi.isid.b  ISID_b
  Unsigned 16-bit integer
  Initiator part of session identifier - b
iscsi.isid.c  ISID_c
  Unsigned 8-bit integer
  Initiator part of session identifier - c
iscsi.isid.d  ISID_d
  Unsigned 16-bit integer
  Initiator part of session identifier - d
iscsi.isid.namingauthority  ISID_NamingAuthority
  Unsigned 24-bit integer
  Initiator part of session identifier - naming authority
iscsi.isid.qualifier  ISID_Qualifier
  Unsigned 8-bit integer
  Initiator part of session identifier - qualifier
iscsi.isid.t  ISID_t
  Unsigned 8-bit integer
  Initiator part of session identifier - t
iscsi.isid.type  ISID_Type
  Unsigned 8-bit integer
  Initiator part of session identifier - type
iscsi.keyvalue  KeyValue
  String
  Key/value pair
iscsi.login.C  C
  Boolean
  Text incomplete
iscsi.login.T  T
  Boolean
  Transit to next login stage
iscsi.login.X  X
  Boolean
  Restart Connection
iscsi.login.csg  CSG
  Unsigned 8-bit integer
  Current stage
iscsi.login.nsg  NSG
  Unsigned 8-bit integer
  Next stage
iscsi.login.status  Status
  Unsigned 16-bit integer
  Status class and detail
iscsi.logout.reason  Reason
  Unsigned 8-bit integer
  Reason for logout
iscsi.logout.response  Response
  Unsigned 8-bit integer
  Logout response
```

```
iscsi.lun    LUN
             Byte array
             Logical Unit Number

iscsi.maxcmdsn  MaxCmdSN
             Unsigned 32-bit integer
             Maximum acceptable command sequence number

iscsi.opcode  Opcode
             Unsigned 8-bit integer
             Opcode

iscsi.padding  Padding
             Byte array
             Padding to 4 byte boundary

iscsi.parameter1  Parameter1
             Unsigned 16-bit integer
             Parameter 1

iscsi.parameter2  Parameter2
             Unsigned 16-bit integer
             Parameter 2

iscsi.parameter3  Parameter3
             Unsigned 16-bit integer
             Parameter 3

iscsi.pingdata  PingData
             Byte array
             Ping Data

iscsi.r2tsn    R2TSN
             Unsigned 32-bit integer
             R2T PDU Number

iscsi.readdata  ReadData
             Byte array
             Read Data

iscsi.refcmdsn  RefCmdSN
             Unsigned 32-bit integer
             Command sequence number for command to be aborted

iscsi.reject.reason  Reason
             Unsigned 8-bit integer
             Reason for command rejection

iscsi.request_frame  Request in
                    Frame number
                    The request to this transaction is in this frame

iscsi.response_frame  Response in
                    Frame number
                    The response to this transaction is in this frame

iscsi.scsicommand.F  F
                    Boolean
                    PDU completes command

iscsi.scsicommand.R  R
                    Boolean
                    Command reads from SCSI target
```

```
iscsi.scsicommand.W W
  Boolean
  Command writes to SCSI target
iscsi.scsicommand.addcdb AddCDB
  Unsigned 8-bit integer
  Additional CDB length (in 4 byte units)
iscsi.scsicommand.attr Attr
  Unsigned 8-bit integer
  SCSI task attributes
iscsi.scsicommand.crn CRN
  Unsigned 8-bit integer
  SCSI command reference number
iscsi.scsicommand.expecteddatatransferlength ExpectedDataTransferLength
  Unsigned 32-bit integer
  Expected length of data transfer
iscsi.scsidata.A A
  Boolean
  Acknowledge Requested
iscsi.scsidata.F F
  Boolean
  Final PDU
iscsi.scsidata.O O
  Boolean
  Residual overflow
iscsi.scsidata.S S
  Boolean
  PDU Contains SCSI command status
iscsi.scsidata.U U
  Boolean
  Residual underflow
iscsi.scsidata.readresidualcount ResidualCount
  Unsigned 32-bit integer
  Residual count
iscsi.scsiresponse.O O
  Boolean
  Residual overflow
iscsi.scsiresponse.U U
  Boolean
  Residual underflow
iscsi.scsiresponse.bidireadresidualcount BidiReadResidualCount
  Unsigned 32-bit integer
  Bi-directional read residual count
iscsi.scsiresponse.o o
  Boolean
  Bi-directional read residual overflow
iscsi.scsiresponse.residualcount ResidualCount
  Unsigned 32-bit integer
  Residual count
```

```
iscsi.scsiresponse.response  Response
    Unsigned 8-bit integer
    SCSI command response value

iscsi.scsiresponse.senselength  SenseLength
    Unsigned 16-bit integer
    Sense data length

iscsi.scsiresponse.status  Status
    Unsigned 8-bit integer
    SCSI command status value

iscsi.scsiresponse.u  u
    Boolean
    Bi-directional read residual underflow

iscsi.snack.begrun  BegRun
    Unsigned 32-bit integer
    First missed DataSN or StatSN

iscsi.snack.runlength  RunLength
    Unsigned 32-bit integer
    Number of additional missing status PDUs in this run

iscsi.snack.type  S
    Unsigned 8-bit integer
    Type of SNACK requested

iscsi.statsn  StatSN
    Unsigned 32-bit integer
    Status sequence number

iscsi.targettransferstag  TargetTransferTag
    Unsigned 32-bit integer
    Target transfer tag

iscsi.taskmanfun.function  Function
    Unsigned 8-bit integer
    Requested task function

iscsi.taskmanfun.referencedtasktag  ReferencedTaskTag
    Unsigned 32-bit integer
    Referenced task tag

iscsi.taskmanfun.response  Response
    Unsigned 8-bit integer
    Response

iscsi.text.C  C
    Boolean
    Text incomplete

iscsi.text.F  F
    Boolean
    Final PDU in text sequence

iscsi.time  Time from request
    Time duration
    Time between the Command and the Response

iscsi.time2retain  Time2Retain
    Unsigned 16-bit integer
    Time2Retain
```

```
iscsi.time2wait  Time2Wait
                 Unsigned 16-bit integer
                 Time2Wait

iscsi.totalahslength  TotalAHSLength
                 Unsigned 8-bit integer
                 Total additional header segment length (4 byte words)

iscsi.tsid  TSID
           Unsigned 16-bit integer
           Target part of session identifier

iscsi.tsih  TSIH
           Unsigned 16-bit integer
           Target session identifying handle

iscsi.vendorspecificdata  VendorSpecificData
                         Byte array
                         Vendor Specific Data

iscsi.versionactive  VersionActive
                   Unsigned 8-bit integer
                   Negotiated protocol version

iscsi.versionmax  VersionMax
                 Unsigned 8-bit integer
                 Maximum supported protocol version

iscsi.versionmin  VersionMin
                 Unsigned 8-bit integer
                 Minimum supported protocol version

iscsi.writedata  WriteData
                Byte array
                Write Data
```

**iSNS (isns)**

```
isns.PVer  iSNSP Version
          Unsigned 16-bit integer
          iSNS Protocol Version

isns.assigned_id  Assigned ID
                 Unsigned 32-bit integer
                 Assigned ID

isns.attr.len  Attribute Length
              Unsigned 32-bit integer
              iSNS Attribute Length

isns.attr.tag  Attribute Tag
              Unsigned 32-bit integer
              iSNS Attribute Tag

isns.dd.member_portal.ip_address  DD Member Portal IP Address
                                  IPv6 address
                                  DD Member Portal IPv4/IPv6 Address

isns.dd.symbolic_name  DD Symbolic Name
                      String
                      Symbolic name of this DD
```

```
isns.dd_id DD ID
    Unsigned 32-bit integer
    DD ID

isns.dd_member.iscsi_name DD Member iSCSI Name
    String
    DD Member iSCSI Name of device

isns.dd_member_portal_port DD Member Portal Port
    Unsigned 32-bit integer
    TCP/UDP DD Member Portal Port

isns.dd_set.symbolic_name DD Set Symbolic Name
    String
    Symbolic name of this DD Set

isns.dd_set_id DD Set ID
    Unsigned 32-bit integer
    DD Set ID

isns.dd_set_next_id DD Set Next ID
    Unsigned 32-bit integer
    DD Set Next ID

isns.delimiter Delimiter
    No value
    iSNS Delimiter

isns.entity.index Entity Index
    Unsigned 32-bit integer
    Entity Index

isns.entity.next_index Entity Next Index
    Unsigned 32-bit integer
    Next Entity Index

isns.entity_identifier Entity Identifier
    String
    Entity Identifier of this object

isns.entity_protocol Entity Protocol
    Unsigned 32-bit integer
    iSNS Entity Protocol

isns.errorcode ErrorCode
    Unsigned 32-bit integer
    iSNS Response Error Code

isns.esi_interval ESI Interval
    Unsigned 32-bit integer
    ESI Interval in Seconds

isns.esi_port ESI Port
    Unsigned 32-bit integer
    TCP/UDP ESI Port

isns.fabric_port_name Fabric Port Name
    Unsigned 64-bit integer
    Fabric Port Name

isns.fc4_descriptor FC4 Descriptor
    String
    FC4 Descriptor of this device
```

```
isns.fc_node_name_wwnn  FC Node Name WWNN
    Unsigned 64-bit integer
    FC Node Name WWNN

isns.fc_port_name_wwpn  FC Port Name WWPN
    Unsigned 64-bit integer
    FC Port Name WWPN

isns.flags  Flags
    Unsigned 16-bit integer
    iSNS Flags

isns.flags.authentication_block  Auth
    Boolean
    is iSNS Authentication Block present?

isns.flags.client  Client
    Boolean
    iSNS Client

isns.flags.firstpdu  First PDU
    Boolean
    iSNS First PDU

isns.flags.lastpdu  Last PDU
    Boolean
    iSNS Last PDU

isns.flags.replace  Replace
    Boolean
    iSNS Replace

isns.flags.server  Server
    Boolean
    iSNS Server

isns.functionid  Function ID
    Unsigned 16-bit integer
    iSNS Function ID

isns.hard_address  Hard Address
    Unsigned 24-bit integer
    Hard Address

isns.heartbeat.address  Heartbeat Address (ipv6)
    IPv6 address
    Server IPv6 Address

isns.heartbeat.counter  Heartbeat counter
    Unsigned 32-bit integer
    Server Heartbeat Counter

isns.heartbeat.interval  Heartbeat Interval (secs)
    Unsigned 32-bit integer
    Server Heartbeat interval

isns.heartbeat.tcport  Heartbeat TCP Port
    Unsigned 16-bit integer
    Server TCP Port

isns.heartbeat.udport  Heartbeat UDP Port
    Unsigned 16-bit integer
    Server UDP Port
```

```
isns.index DD ID Next ID
  Unsigned 32-bit integer
  DD ID Next ID

isns.iscsi.node_type iSCSI Node Type
  Unsigned 32-bit integer
  iSCSI Node Type

isns.iscsi_alias iSCSI Alias
  String
  iSCSI Alias of device

isns.iscsi_auth_method iSCSI Auth Method
  String
  Authentication Method required by this device

isns.iscsi_name iSCSI Name
  String
  iSCSI Name of device

isns.isnt.control Control
  Boolean
  Control

isns.isnt.initiator Initiator
  Boolean
  Initiator

isns.isnt.target Target
  Boolean
  Target

isns.member_fc_port_name Member FC Port Name
  Unsigned 32-bit integer
  Member FC Port Name

isns.member_iscsi_index Member iSCSI Index
  Unsigned 32-bit integer
  Member iSCSI Index

isns.member_portal_index Member Portal Index
  Unsigned 32-bit integer
  Member Portal Index

isns.mgmt.ip_address Management IP Address
  IPv6 address
  Management IPv4/IPv6 Address

isns.node.index Node Index
  Unsigned 32-bit integer
  Node Index

isns.node.ip_address Node IP Address
  IPv6 address
  Node IPv4/IPv6 Address

isns.node.next_index Node Next Index
  Unsigned 32-bit integer
  Node INext ndex

isns.node.symbolic_name Symbolic Node Name
  String
  Symbolic name of this node
```

```
isns.node_ipa  Node IPA
  Unsigned 64-bit integer
  Node IPA

isns.not_decoded_yet  Not Decoded Yet
  No value
  This tag is not yet decoded by wireshark

isns.payload  Payload
  Byte array
  Payload

isns.pdulength  PDU Length
  Unsigned 16-bit integer
  iSNS PDU Length

isns.permanent_port_name  Permanent Port Name
  Unsigned 64-bit integer
  Permanent Port Name

isns.pg.portal_port  PG Portal Port
  Unsigned 32-bit integer
  PG Portal TCP/UDP Port

isns.pg_index  PG Index
  Unsigned 32-bit integer
  PG Index

isns.pg_iscsi_name  PG iSCSI Name
  String
  PG iSCSI Name

isns.pg_next_index  PG Next Index
  Unsigned 32-bit integer
  PG Next Index

isns.pg_portal.ip_address  PG Portal IP Address
  IPv6 address
  PG Portal IPv4/IPv6 Address

isns.port.ip_address  Port IP Address
  IPv6 address
  Port IPv4/IPv6 Address

isns.port.port_type  Port Type
  Boolean
  Port Type

isns.port.symbolic_name  Symbolic Port Name
  String
  Symbolic name of this port

isns.port_id  Port ID
  Unsigned 24-bit integer
  Port ID

isns.portal.index  Portal Index
  Unsigned 32-bit integer
  Portal Index

isns.portal.ip_address  Portal IP Address
  IPv6 address
  Portal IPv4/IPv6 Address
```

```
isns.portal.next_index  Portal Next Index
    Unsigned 32-bit integer
    Portal Next Index

isns.portal.symbolic_name  Portal Symbolic Name
    String
    Symbolic name of this portal

isns.portal_group_tag  PG Tag
    Unsigned 32-bit integer
    Portal Group Tag

isns.portal_port  Portal Port
    Unsigned 32-bit integer
    TCP/UDP Portal Port

isns.preferred_id  Preferred ID
    Unsigned 32-bit integer
    Preferred ID

isns.proxy_iscsi_name  Proxy iSCSI Name
    String
    Proxy iSCSI Name

isns.psb  Portal Security Bitmap
    Unsigned 32-bit integer
    Portal Security Bitmap

isns.psb.aggressive_mode  Aggressive Mode
    Boolean
    Aggressive Mode

isns.psb.bitmap  Bitmap
    Boolean
    Bitmap

isns.psb.ike_ipsec  IKE/IPSec
    Boolean
    IKE/IPSec

isns.psb.main_mode  Main Mode
    Boolean
    Main Mode

isns.psb.pfs  PFS
    Boolean
    PFS

isns.psb.transport  Transport Mode
    Boolean
    Transport Mode

isns.psb.tunnel  Tunnel Mode
    Boolean
    Tunnel Mode Preferred

isns.registration_period  Registration Period
    Unsigned 32-bit integer
    Registration Period in Seconds

isns.scn_bitmap  iSCSI SCN Bitmap
    Unsigned 32-bit integer
    iSCSI SCN Bitmap
```

```
isns.scn_bitmap.dd_dds_member_added  DD/DDS Member Added (Mgmt Reg/SCN only)
  Boolean
  DD/DDS Member Added (Mgmt Reg/SCN only)
isns.scn_bitmap.dd_dds_member_removed  DD/DDS Member Removed (Mgmt Reg/SCN only)
  Boolean
  DD/DDS Member Removed (Mgmt Reg/SCN only)
isns.scn_bitmap.initiator_and_self_information_only  Initiator And Self Informat
  Boolean
  Initiator And Self Information Only
isns.scn_bitmap.management_registration_scn  Management Registration/SCN
  Boolean
  Management Registration/SCN
isns.scn_bitmap.object_added  Object Added
  Boolean
  Object Added
isns.scn_bitmap.object_removed  Object Removed
  Boolean
  Object Removed
isns.scn_bitmap.object_updated  Object Updated
  Boolean
  Object Updated
isns.scn_bitmap.target_and_self_information_only  Target And Self Information On
  Boolean
  Target And Self Information Only
isns.scn_port  SCN Port
  Unsigned 32-bit integer
  TCP/UDP SCN Port
isns.sequenceid  Sequence ID
  Unsigned 16-bit integer
  iSNS sequence ID
isns.switch_name  Switch Name
  Unsigned 64-bit integer
  Switch Name
isns.timestamp  Timestamp
  Unsigned 64-bit integer
  Timestamp in Seconds
isns.transactionid  Transaction ID
  Unsigned 16-bit integer
  iSNS transaction ID
isns.virtual_fabric_id  Virtual Fabric ID
  String
  Virtual fabric ID
isns.wwnn_token  WWNN Token
  Unsigned 64-bit integer
  WWNN Token
```

## NOTES

The **wireshark-filters** manpage is part of the **Wireshark** distribution. The latest version of **Wireshark** can be found at <<http://www.wireshark.org>>.

Regular expressions in the “matches” operator are provided with **libpcre**, the Perl-Compatible Regular Expressions library: see <http://www.pcre.org/>.

This manpage does not describe the capture filter syntax, which is different. See the manual page of *pcap-filter*(4) or, if that doesn't exist, *tcpdump*(8) for a description of capture filters. Microsoft Windows versions use WinPcap from <<http://www.winpcap.org/>> for which the capture filter syntax is described in <[http://www.winpcap.org/docs/man/html/group\\_\\_language.html](http://www.winpcap.org/docs/man/html/group__language.html)>.

## SEE ALSO
