

**NAME**

wireshark-filter – Wireshark filter syntax and reference

**SYNOPSIS**

**wireshark** [other options] [ **-R** “filter expression” ]

**tshark** [other options] [ **-R** “filter expression” ]

**DESCRIPTION**

**Wireshark** and **TShark** share a powerful filter engine that helps remove the noise from a packet trace and lets you see only the packets that interest you. If a packet meets the requirements expressed in your filter, then it is displayed in the list of packets. Display filters let you compare the fields within a protocol against a specific value, compare fields against fields, and check the existence of specified fields or protocols.

Filters are also used by other features such as statistics generation and packet list colorization (the latter is only available to **Wireshark**). This manual page describes their syntax and provides a comprehensive reference of filter fields.

**FILTER SYNTAX****Check whether a field or protocol exists**

The simplest filter allows you to check for the existence of a protocol or field. If you want to see all packets which contain the IP protocol, the filter would be “ip” (without the quotation marks). To see all packets that contain a Token-Ring RIF field, use “tr.rif”.

Think of a protocol or field in a filter as implicitly having the “exists” operator.

Note: all protocol and field names that are available in **Wireshark** and **TShark** filters are listed in the comprehensive **FILTER PROTOCOL REFERENCE** (see below).

**Comparison operators**

Fields can also be compared against values. The comparison operators can be expressed either through English-like abbreviations or through C-like symbols:

```
eq, ==      Equal
ne, !=      Not Equal
gt, >       Greater Than
lt, <       Less Than
ge, >=      Greater than or Equal to
le, <=      Less than or Equal to
```

**Search and match operators**

Additional operators exist expressed only in English, not C-like syntax:

```
contains    Does the protocol, field or slice contain a value
matches     Does the protocol or text string match the given Perl
            regular expression
```

The “contains” operator allows a filter to search for a sequence of characters, expressed as a string (quoted or unquoted), or bytes, expressed as a byte array. For example, to search for a given HTTP URL in a capture, the following filter can be used:

```
http contains "http://www.wireshark.org"
```

The “contains” operator cannot be used on atomic fields, such as numbers or IP addresses.

The “matches” operator allows a filter to apply to a specified Perl-compatible regular expression (PCRE). The “matches” operator is only implemented for protocols and for protocol fields with a text string representation. For example, to search for a given WAP WSP User-Agent, you can write:

```
wsp.user_agent matches "(?i)cldc"
```

This example shows an interesting PCRE feature: pattern match options have to be specified with the

(*?option*) construct. For instance, (*?i*) performs a case-insensitive pattern match. More information on PCRE can be found in the *pcrpattern*(3) man page (Perl Regular Expressions are explained in <<http://www.perl-doc.com/perl5.8.0/pod/perlre.html>>).

Note: the “matches” operator is only available if **Wireshark** or **TShark** have been compiled with the PCRE library. This can be checked by running:

```
wireshark -v
tshark -v
```

or selecting the “About Wireshark” item from the “Help” menu in **Wireshark**.

## Functions

The filter language has the following functions:

```
upper(string-field) - converts a string field to uppercase
lower(string-field) - converts a string field to lowercase
```

*upper()* and *lower()* are useful for performing case-insensitive string comparisons. For example:

```
upper(ncp.nds_stream_name) contains "MACRO"
lower(mount.dump.hostname) == "angel"
```

## Protocol field types

Each protocol field is typed. The types are:

```
Unsigned integer (8-bit, 16-bit, 24-bit, or 32-bit)
Signed integer (8-bit, 16-bit, 24-bit, or 32-bit)
Boolean
Ethernet address (6 bytes)
Byte array
IPv4 address
IPv6 address
IPX network number
Text string
Double-precision floating point number
```

An integer may be expressed in decimal, octal, or hexadecimal notation. The following three display filters are equivalent:

```
frame.pkt_len > 10
frame.pkt_len > 012
frame.pkt_len > 0xa
```

Boolean values are either true or false. In a display filter expression testing the value of a Boolean field, “true” is expressed as 1 or any other non-zero value, and “false” is expressed as zero. For example, a token-ring packet’s source route field is Boolean. To find any source-routed packets, a display filter would be:

```
tr.sr == 1
```

Non source-routed packets can be found with:

```
tr.sr == 0
```

Ethernet addresses and byte arrays are represented by hex digits. The hex digits may be separated by colons, periods, or hyphens:

```
eth.dst eq ff:ff:ff:ff:ff:ff
aim.data == 0.1.0.d
fddi.src == aa-aa-aa-aa-aa-aa
echo.data == 7a
```

IPv4 addresses can be represented in either dotted decimal notation or by using the hostname:

```
ip.dst eq www.mit.edu
ip.src == 192.168.1.1
```

IPv4 addresses can be compared with the same logical relations as numbers: eq, ne, gt, ge, lt, and le. The IPv4 address is stored in host order, so you do not have to worry about the endianness of an IPv4 address when using it in a display filter.

Classless InterDomain Routing (CIDR) notation can be used to test if an IPv4 address is in a certain subnet. For example, this display filter will find all packets in the 129.111 Class-B network:

```
ip.addr == 129.111.0.0/16
```

Remember, the number after the slash represents the number of bits used to represent the network. CIDR notation can also be used with hostnames, as in this example of finding IP addresses on the same Class C network as 'sneezy':

```
ip.addr eq sneezy/24
```

The CIDR notation can only be used on IP addresses or hostnames, not in variable names. So, a display filter like "ip.src/24 == ip.dst/24" is not valid (yet).

IPX networks are represented by unsigned 32-bit integers. Most likely you will be using hexadecimal when testing IPX network values:

```
ipx.src.net == 0xc0a82c00
```

Strings are enclosed in double quotes:

```
http.request.method == "POST"
```

Inside double quotes, you may use a backslash to embed a double quote or an arbitrary byte represented in either octal or hexadecimal.

```
browser.comment == "An embedded \" double-quote"
```

Use of hexadecimal to look for "HEAD":

```
http.request.method == "\x48EAD"
```

Use of octal to look for "HEAD":

```
http.request.method == "\110EAD"
```

This means that you must escape backslashes with backslashes inside double quotes.

```
smb.path contains "\\\"SERVER\"SHARE"
```

looks for \\SERVER\SHARE in "smb.path".

### The slice operator

You can take a slice of a field if the field is a text string or a byte array. For example, you can filter on the vendor portion of an ethernet address (the first three bytes) like this:

```
eth.src[0:3] == 00:00:83
```

Another example is:

```
http.content_type[0:4] == "text"
```

You can use the slice operator on a protocol name, too. The "frame" protocol can be useful, encompassing all the data captured by **Wireshark** or **TShark**.

```
token[0:5] ne 0.0.0.1.1
llc[0] eq aa
frame[100-199] contains "wireshark"
```

The following syntax governs slices:

```

[i:j]    i = start_offset, j = length
[i-j]    i = start_offset, j = end_offset, inclusive.
[i]      i = start_offset, length = 1
[:j]     start_offset = 0, length = j
[i:]     start_offset = i, end_offset = end_of_field

```

Offsets can be negative, in which case they indicate the offset from the **end** of the field. The last byte of the field is at offset  $-1$ , the last but one byte is at offset  $-2$ , and so on. Here's how to check the last four bytes of a frame:

```
frame[-4:4] == 0.1.2.3
```

or

```
frame[-4:] == 0.1.2.3
```

You can concatenate slices using the comma operator:

```
ftp[1,3-5,9:] == 01:03:04:05:09:0a:0b
```

This concatenates offset 1, offsets 3–5, and offset 9 to the end of the ftp data.

### Type conversions

If a field is a text string or a byte array, it can be expressed in whichever way is most convenient.

So, for instance, the following filters are equivalent:

```

http.request.method == "GET"
http.request.method == 47.45.54

```

A range can also be expressed in either way:

```

frame[60:2] gt 50.51
frame[60:2] gt "PQ"

```

### Bit field operations

It is also possible to define tests with bit field operations. Currently the following bit field operation is supported:

```
bitwise_and, &      Bitwise AND
```

The bitwise AND operation allows testing to see if one or more bits are set. Bitwise AND operates on integer protocol fields and slices.

When testing for TCP SYN packets, you can write:

```
tcp.flags & 0x02
```

That expression will match all packets that contain a “tcp.flags” field with the 0x02 bit, i.e. the SYN bit, set.

Similarly, filtering for all WSP GET and extended GET methods is achieved with:

```
wsp.pdu_type & 0x40
```

When using slices, the bit mask must be specified as a byte string, and it must have the same number of bytes as the slice itself, as in:

```
ip[42:2] & 40:ff
```

### Logical expressions

Tests can be combined using logical expressions. These too are expressible in C-like syntax or with English-like abbreviations:

```

and, &&   Logical AND
or,  ||   Logical OR
not, !    Logical NOT

```

Expressions can be grouped by parentheses as well. The following are all valid display filter expressions:

```

tcp.port == 80 and ip.src == 192.168.2.1
not llc
http and frame[100-199] contains "wireshark"
(ipx.src.net == 0xbad && ipx.src.node == 0.0.0.0.0.1) || ip

```

Remember that whenever a protocol or field name occurs in an expression, the “exists” operator is implicitly called. The “exists” operator has the highest priority. This means that the first filter expression must be read as “show me the packets for which tcp.port exists and equals 80, and ip.src exists and equals 192.168.2.1”. The second filter expression means “show me the packets where not (llc exists)”, or in other words “where llc does not exist” and hence will match all packets that do not contain the llc protocol. The third filter expression includes the constraint that offset 199 in the frame exists, in other words the length of the frame is at least 200.

A special caveat must be given regarding fields that occur more than once per packet. “ip.addr” occurs twice per IP packet, once for the source address, and once for the destination address. Likewise, “tr.rif.ring” fields can occur more than once per packet. The following two expressions are not equivalent:

```

ip.addr ne 192.168.4.1
not ip.addr eq 192.168.4.1

```

The first filter says “show me packets where an ip.addr exists that does not equal 192.168.4.1”. That is, as long as one ip.addr in the packet does not equal 192.168.4.1, the packet passes the display filter. The other ip.addr could equal 192.168.4.1 and the packet would still be displayed. The second filter says “don’t show me any packets that have an ip.addr field equal to 192.168.4.1”. If one ip.addr is 192.168.4.1, the packet does not pass. If **neither** ip.addr field is 192.168.4.1, then the packet is displayed.

It is easy to think of the ‘ne’ and ‘eq’ operators as having an implicit “exists” modifier when dealing with multiply-recurring fields. “ip.addr ne 192.168.4.1” can be thought of as “there exists an ip.addr that does not equal 192.168.4.1”. “not ip.addr eq 192.168.4.1” can be thought of as “there does not exist an ip.addr equal to 192.168.4.1”.

Be careful with multiply-recurring fields; they can be confusing.

Care must also be taken when using the display filter to remove noise from the packet trace. If, for example, you want to filter out all IP multicast packets to address 224.1.2.3, then using:

```
ip.dst ne 224.1.2.3
```

may be too restrictive. Filtering with “ip.dst” selects only those **IP** packets that satisfy the rule. Any other packets, including all non-IP packets, will not be displayed. To display the non-IP packets as well, you can use one of the following two expressions:

```

not ip or ip.dst ne 224.1.2.3
not ip.addr eq 224.1.2.3

```

The first filter uses “not ip” to include all non-IP packets and then lets “ip.dst ne 224.1.2.3” filter out the unwanted IP packets. The second filter has already been explained above where filtering with multiply occurring fields was discussed.

## FILTER PROTOCOL REFERENCE

Each entry below provides an abbreviated protocol or field name. Every one of these fields can be used in a display filter. The type of the field is also given.

**3Com XNS Encapsulation (3comxns)**

3comxns.type Type  
Unsigned 16-bit integer

**3GPP2 A11 (a11)**

a11.ackstat Reply Status  
Unsigned 8-bit integer  
All Registration Ack Status.

a11.auth.auth Authenticator  
Byte array  
Authenticator.

a11.auth.spi SPI  
Unsigned 32-bit integer  
Authentication Header Security Parameter Index.

a11.b Broadcast Datagrams  
Boolean  
Broadcast Datagrams requested

a11.coa Care of Address  
IPv4 address  
Care of Address.

a11.code Reply Code  
Unsigned 8-bit integer  
All Registration Reply code.

a11.d Co-located Care-of Address  
Boolean  
MN using Co-located Care-of address

a11.ext.apptype Application Type  
Unsigned 8-bit integer  
Application Type.

a11.ext.ase.key GRE Key  
Unsigned 32-bit integer  
GRE Key.

a11.ext.ase.len Entry Length  
Unsigned 8-bit integer  
Entry Length.

a11.ext.ase.pcfip PCF IP Address  
IPv4 address  
PCF IP Address.

a11.ext.ase.ptype GRE Protocol Type  
Unsigned 16-bit integer  
GRE Protocol Type.

a11.ext.ase.srid Service Reference ID (SRID)  
Unsigned 8-bit integer  
Service Reference ID (SRID).

a11.ext.ase.srvopt Service Option  
Unsigned 16-bit integer  
Service Option.

all.ext.auth.subtype Gen Auth Ext SubType  
Unsigned 8-bit integer  
Mobile IP Auth Extension Sub Type.

all.ext.canid CANID  
Byte array  
CANID

all.ext.code Reply Code  
Unsigned 8-bit integer  
PDSN Code.

all.ext.dormant All Dormant Indicator  
Unsigned 16-bit integer  
All Dormant Indicator.

all.ext.fqi.dscp Forward DSCP  
Unsigned 8-bit integer  
Forward Flow DSCP.

all.ext.fqi.entrylen Entry Length  
Unsigned 8-bit integer  
Forward Entry Length.

all.ext.fqi.flags Flags  
Unsigned 8-bit integer  
Forward Flow Entry Flags.

all.ext.fqi.flowcount Forward Flow Count  
Unsigned 8-bit integer  
Forward Flow Count.

all.ext.fqi.flowid Forward Flow Id  
Unsigned 8-bit integer  
Forward Flow Id.

all.ext.fqi.flowstate Forward Flow State  
Unsigned 8-bit integer  
Forward Flow State.

all.ext.fqi.graqos Granted QoS  
Byte array  
Forward Granted QoS.

all.ext.fqi.graqoslen Granted QoS Length  
Unsigned 8-bit integer  
Forward Granted QoS Length.

all.ext.fqi.length Length  
Unsigned 16-bit integer

all.ext.fqi.reqqos Requested QoS  
Byte array  
Forward Requested QoS.

all.ext.fqi.reqqoslen Requested QoS Length  
Unsigned 8-bit integer  
Forward Requested QoS Length.

all.ext.fqi.srid SRID  
Unsigned 8-bit integer  
Forward Flow Entry SRID.

all.ext.fqui.flowcount Forward QoS Update Flow Count  
Unsigned 8-bit integer  
Forward QoS Update Flow Count.

all.ext.fqui.updatedqos Foward Updated QoS Sub-Blob  
Byte array  
Foward Updated QoS Sub-Blob.

all.ext.fqui.updatedqoslen Foward Updated QoS Sub-Blob Length  
Unsigned 8-bit integer  
Foward Updated QoS Sub-Blob Length.

all.ext.key Key  
Unsigned 32-bit integer  
Session Key.

all.ext.len Extension Length  
Unsigned 16-bit integer  
Mobile IP Extension Length.

all.ext.mnsrid MNSR-ID  
Unsigned 16-bit integer  
MNSR-ID

all.ext.msids MSID(BCD)  
String  
MSID(BCD).

all.ext.msidslen MSID Length  
Unsigned 8-bit integer  
MSID Length.

all.ext.msids\_type MSID Type  
Unsigned 16-bit integer  
MSID Type.

all.ext.panid PANID  
Byte array  
PANID

all.ext.ppaddr Anchor P-P Address  
IPv4 address  
Anchor P-P Address.

all.ext.ptype Protocol Type  
Unsigned 16-bit integer  
Protocol Type.

all.ext.qosmode QoS Mode  
Unsigned 8-bit integer  
QoS Mode.

all.ext.rqi.entrylen Entry Length  
Unsigned 8-bit integer  
Reverse Flow Entry Length.

all.ext.rqi.flowcount Reverse Flow Count  
Unsigned 8-bit integer  
Reverse Flow Count.

all.ext.rqi.flowid Reverse Flow Id  
Unsigned 8-bit integer  
Reverse Flow Id.

all.ext.rqi.flowstate Flow State  
Unsigned 8-bit integer  
Reverse Flow State.

all.ext.rqi.graqos Granted QoS  
Byte array  
Reverse Granted QoS.

all.ext.rqi.graqoslen Granted QoS Length  
Unsigned 8-bit integer  
Reverse Granted QoS Length.

all.ext.rqi.length Length  
Unsigned 16-bit integer

all.ext.rqi.reqqos Requested QoS  
Byte array  
Reverse Requested QoS.

all.ext.rqi.reqqoslen Requested QoS Length  
Unsigned 8-bit integer  
Reverse Requested QoS Length.

all.ext.rqi.srid SRID  
Unsigned 8-bit integer  
Reverse Flow Entry SRID.

all.ext.rqui.flowcount Reverse QoS Update Flow Count  
Unsigned 8-bit integer  
Reverse QoS Update Flow Count.

all.ext.rqui.updatedqos Reverse Updated QoS Sub-Blob  
Byte array  
Reverse Updated QoS Sub-Blob.

all.ext.rqui.updatedqoslen Reverse Updated QoS Sub-Blob Length  
Unsigned 8-bit integer  
Reverse Updated QoS Sub-Blob Length.

all.ext.sidver Session ID Version  
Unsigned 8-bit integer  
Session ID Version

all.ext.sqp.profile Subscriber QoS Profile  
Byte array  
Subscriber QoS Profile.

all.ext.sqp.profilelen Subscriber QoS Profile Length  
Byte array  
Subscriber QoS Profile Length.

all.ext.srvopt Service Option  
Unsigned 16-bit integer  
Service Option.

all.ext.type Extension Type  
Unsigned 8-bit integer  
Mobile IP Extension Type.

all.ext.vid Vendor ID  
Unsigned 32-bit integer  
Vendor ID.

all.extension Extension  
Byte array  
Extension

all.flags Flags  
Unsigned 8-bit integer

all.g GRE  
Boolean  
MN wants GRE encapsulation

all.haaddr Home Agent  
IPv4 address  
Home agent IP Address.

all.homeaddr Home Address  
IPv4 address  
Mobile Node's home address.

all.ident Identification  
Byte array  
MN Identification.

all.life Lifetime  
Unsigned 16-bit integer  
All Registration Lifetime.

all.m Minimal Encapsulation  
Boolean  
MN wants Minimal encapsulation

all.nai NAI  
String  
NAI

all.s Simultaneous Bindings  
Boolean  
Simultaneous Bindings Allowed

all.t Reverse Tunneling  
Boolean  
Reverse tunneling requested

all.type Message Type  
Unsigned 8-bit integer  
All Message type.

all.v Van Jacobson  
Boolean  
Van Jacobson

### **3com Network Jack (njack)**

njack.getresp.unknown1 Unknown1  
Unsigned 8-bit integer

njack.magic Magic  
String

njack.set.length SetLength  
Unsigned 16-bit integer

```
njack.set.salt    Salt
                  Unsigned 32-bit integer

            Byte array
            VLAN Trailer
```

### 802.1X Authentication (eapol)

```
eapol.keydes.data  WPA Key
                  Byte array
                  WPA Key Data

eapol.keydes.dataLen  WPA Key Length
                     Unsigned 16-bit integer
                     WPA Key Data Length

eapol.keydes.id  WPA Key ID
                 Byte array
                 WPA Key ID(RSN Reserved)

eapol.keydes.index.indexnum  Index Number
                             Unsigned 8-bit integer
                             Key Index number

eapol.keydes.index.keytype  Key Type
                            Boolean
                            Key Type (unicast/broadcast)

eapol.keydes.key  Key
                  Byte array
                  Key

eapol.keydes.key_info  Key Information
                       Unsigned 16-bit integer
                       WPA key info

eapol.keydes.key_info.encr_key_data  Encrypted Key Data flag
                                      Boolean
                                      Encrypted Key Data flag

eapol.keydes.key_info.error  Error flag
                              Boolean
                              Error flag

eapol.keydes.key_info.install  Install flag
                                Boolean
                                Install flag
```

```
eapol.keydes.key_info.key_ack  Key Ack flag
    Boolean
    Key Ack flag

eapol.keydes.key_info.key_index  Key Index
    Unsigned 16-bit integer
    Key Index (0-3) (RSN: Reserved)

eapol.keydes.key_info.key_mic  Key MIC flag
    Boolean
    Key MIC flag

eapol.keydes.key_info.key_type  Key Type
    Boolean
    Key Type (Pairwise or Group)

eapol.keydes.key_info.keydes_ver  Key Descriptor Version
    Unsigned 16-bit integer
    Key Descriptor Version Type

eapol.keydes.key_info.request  Request flag
    Boolean
    Request flag

eapol.keydes.key_info.secure  Secure flag
    Boolean
    Secure flag

eapol.keydes.key_iv  Key IV
    Byte array
    Key Initialization Vector

eapol.keydes.key_signature  Key Signature
    Byte array
    Key Signature

eapol.keydes.keylen  Key Length
    Unsigned 16-bit integer
    Key Length

eapol.keydes.mic  WPA Key MIC
    Byte array
    WPA Key Message Integrity Check

eapol.keydes.nonce  Nonce
    Byte array
    WPA Key Nonce

eapol.keydes.replay_counter  Replay Counter
    Unsigned 64-bit integer
    Replay Counter

eapol.keydes.rsc  WPA Key RSC
    Byte array
    WPA Key Receive Sequence Counter

eapol.keydes.type  Descriptor Type
    Unsigned 8-bit integer
    Key Descriptor Type

eapol.len  Length
    Unsigned 16-bit integer
    Length
```

eapol.type Type  
Unsigned 8-bit integer

```

### **Address Resolution Protocol (arp)**

```
arp.dst.atm_num_e164  Target ATM number (E.164)
                     String

arp.dst.atm_num_nsap  Target ATM number (NSAP)
                     Byte array

arp.dst.atm_subaddr  Target ATM subaddress
                    Byte array

arp.dst.hlen  Target ATM number length
             Unsigned 8-bit integer

arp.dst.htype  Target ATM number type
             Boolean

arp.dst.hw  Target hardware address
           Byte array

arp.dst.hw_mac  Target MAC address
              6-byte Hardware (MAC) Address

arp.dst.pln  Target protocol size
            Unsigned 8-bit integer

arp.dst.proto  Target protocol address
             Byte array

arp.dst.proto_ipv4  Target IP address
                  IPv4 address

arp.dst.slen  Target ATM subaddress length
            Unsigned 8-bit integer

arp.dst.stype  Target ATM subaddress type
            Boolean

arp.duplicate-address-detected  Duplicate IP address detected
                               No value

arp.duplicate-address-frame  Frame showing earlier use of IP address
                             Frame number
```

```
arp.hw.size    Hardware size
               Unsigned 8-bit integer
arp.hw.type    Hardware type
               Unsigned 16-bit integer
arp.opcode     Opcode
               Unsigned 16-bit integer
arp.packet-storm-detected  Packet storm detected
               No value
arp.proto.size Protocol size
               Unsigned 8-bit integer
arp.proto.type Protocol type
               Unsigned 16-bit integer
arp.seconds-since-duplicate-address-frame  Seconds since earlier frame seen
               Unsigned 32-bit integer
arp.src.atm_num_e164  Sender ATM number (E.164)
               String
arp.src.atm_num_nsap  Sender ATM number (NSAP)
               Byte array
arp.src.atm_subaddr  Sender ATM subaddress
               Byte array
arp.src.hlen  Sender ATM number length
               Unsigned 8-bit integer
arp.src.htype  Sender ATM number type
               Boolean
arp.src.hw  Sender hardware address
               Byte array
arp.src.hw_mac  Sender MAC address
               6-byte Hardware (MAC) Address
arp.src.pln  Sender protocol size
               Unsigned 8-bit integer
arp.src.proto  Sender protocol address
               Byte array
arp.src.proto_ipv4  Sender IP address
               IPv4 address
arp.src.slen  Sender ATM subaddress length
               Unsigned 8-bit integer
arp.src.stype  Sender ATM subaddress type
               Boolean
```

#### **Advanced Message Queueing Protocol (amqp)**

```
amqp.channel  Channel
               Unsigned 16-bit integer
               Channel ID
amqp.header.body-size  Body size
               Unsigned 64-bit integer
               Body size
```

```
amqp.header.class      Class ID
                        Unsigned 16-bit integer
                        Class ID

amqp.header.properties Properties
                        No value
                        Message properties

amqp.header.property-flags Property flags
                        Unsigned 16-bit integer
                        Property flags

amqp.header.weight     Weight
                        Unsigned 16-bit integer
                        Weight

amqp.init.id_major     Protocol ID Major
                        Unsigned 8-bit integer
                        Protocol ID major

amqp.init.id_minor     Protocol ID Minor
                        Unsigned 8-bit integer
                        Protocol ID minor

amqp.init.protocol     Protocol
                        String
                        Protocol name

amqp.init.version_major Version Major
                        Unsigned 8-bit integer
                        Protocol version major

amqp.init.version_minor Version Minor
                        Unsigned 8-bit integer
                        Protocol version minor

amqp.length            Length
                        Unsigned 32-bit integer
                        Length of the frame

amqp.method.arguments  Arguments
                        No value
                        Method arguments

amqp.method.arguments.active Active
                        Boolean
                        active

amqp.method.arguments.arguments Arguments
                        No value
                        arguments

amqp.method.arguments.auto_delete Auto-Delete
                        Boolean
                        auto-delete

amqp.method.arguments.capabilities Capabilities
                        String
                        capabilities

amqp.method.arguments.challenge Challenge
                        Byte array
                        challenge
```

```
amqp.method.arguments.channel_id  Channel-Id
    Byte array
    channel-id

amqp.method.arguments.channel_max  Channel-Max
    Unsigned 16-bit integer
    channel-max

amqp.method.arguments.class_id    Class-Id
    Unsigned 16-bit integer
    class-id

amqp.method.arguments.client_properties  Client-Properties
    No value
    client-properties

amqp.method.arguments.cluster_id  Cluster-Id
    String
    cluster-id

amqp.method.arguments.consume_rate  Consume-Rate
    Unsigned 32-bit integer
    consume-rate

amqp.method.arguments.consumer_count  Consumer-Count
    Unsigned 32-bit integer
    consumer-count

amqp.method.arguments.consumer_tag  Consumer-Tag
    String
    consumer-tag

amqp.method.arguments.content_size  Content-Size
    Unsigned 64-bit integer
    content-size

amqp.method.arguments.delivery_tag  Delivery-Tag
    Unsigned 64-bit integer
    delivery-tag

amqp.method.arguments.dtx_identifier  Dtx-Identifier
    String
    dtx-identifier

amqp.method.arguments.durable  Durable
    Boolean
    durable

amqp.method.arguments.exchange  Exchange
    String
    exchange

amqp.method.arguments.exclusive  Exclusive
    Boolean
    exclusive

amqp.method.arguments.filter  Filter
    No value
    filter

amqp.method.arguments.frame_max  Frame-Max
    Unsigned 32-bit integer
    frame-max
```

```
amqp.method.arguments.global    Global
    Boolean
    global

amqp.method.arguments.heartbeat Heartbeat
    Unsigned 16-bit integer
    heartbeat

amqp.method.arguments.host      Host
    String
    host

amqp.method.arguments.identifier Identifier
    String
    identifier

amqp.method.arguments.if_empty  If-Empty
    Boolean
    if-empty

amqp.method.arguments.if_unused If-Unused
    Boolean
    if-unused

amqp.method.arguments.immediate Immediate
    Boolean
    immediate

amqp.method.arguments.insist    Insist
    Boolean
    insist

amqp.method.arguments.internal  Internal
    Boolean
    internal

amqp.method.arguments.known_hosts Known-Hosts
    String
    known-hosts

amqp.method.arguments.locale    Locale
    String
    locale

amqp.method.arguments.locales   Locales
    Byte array
    locales

amqp.method.arguments.mandatory Mandatory
    Boolean
    mandatory

amqp.method.arguments.mechanism Mechanism
    String
    mechanism

amqp.method.arguments.mechanisms Mechanisms
    Byte array
    mechanisms

amqp.method.arguments.message_count Message-Count
    Unsigned 32-bit integer
    message-count
```

```
amqp.method.arguments.meta_data  Meta-Data
    No value
    meta-data

amqp.method.arguments.method_id  Method-Id
    Unsigned 16-bit integer
    method-id

amqp.method.arguments.multiple  Multiple
    Boolean
    multiple

amqp.method.arguments.no_ack    No-Ack
    Boolean
    no-ack

amqp.method.arguments.no_local  No-Local
    Boolean
    no-local

amqp.method.arguments.nowait    Nowait
    Boolean
    nowait

amqp.method.arguments.out_of_band  Out-Of-Band
    String
    out-of-band

amqp.method.arguments.passive  Passive
    Boolean
    passive

amqp.method.arguments.prefetch_count  Prefetch-Count
    Unsigned 16-bit integer
    prefetch-count

amqp.method.arguments.prefetch_size  Prefetch-Size
    Unsigned 32-bit integer
    prefetch-size

amqp.method.arguments.queue  Queue
    String
    queue

amqp.method.arguments.read  Read
    Boolean
    read

amqp.method.arguments.realm  Realm
    String
    realm

amqp.method.arguments.redelivered  Redelivered
    Boolean
    redelivered

amqp.method.arguments.reply_code  Reply-Code
    Unsigned 16-bit integer
    reply-code

amqp.method.arguments.reply_text  Reply-Text
    String
    reply-text
```

```
amqp.method.arguments.requeue    Requeue
    Boolean
    requeue

amqp.method.arguments.response    Response
    Byte array
    response

amqp.method.arguments.routing_key Routing-Key
    String
    routing-key

amqp.method.arguments.server_properties Server-Properties
    No value
    server-properties

amqp.method.arguments.staged_size Staged-Size
    Unsigned 64-bit integer
    staged-size

amqp.method.arguments.ticket      Ticket
    Unsigned 16-bit integer
    ticket

amqp.method.arguments.type        Type
    String
    type

amqp.method.arguments.version_major Version-Major
    Unsigned 8-bit integer
    version-major

amqp.method.arguments.version_minor Version-Minor
    Unsigned 8-bit integer
    version-minor

amqp.method.arguments.virtual_host Virtual-Host
    String
    virtual-host

amqp.method.arguments.write       Write
    Boolean
    write

amqp.method.class                 Class
    Unsigned 16-bit integer
    Class ID

amqp.method.method                 Method
    Unsigned 16-bit integer
    Method ID

amqp.method.properties.app_id     App-Id
    String
    app-id

amqp.method.properties.broadcast Broadcast
    Unsigned 8-bit integer
    broadcast

amqp.method.properties.cluster_id Cluster-Id
    String
    cluster-id
```

```
amqp.method.properties.content_encoding  Content-Encoding
String
content-encoding

amqp.method.properties.content_type      Content-Type
String
content-type

amqp.method.properties.correlation_id    Correlation-Id
String
correlation-id

amqp.method.properties.data_name         Data-Name
String
data-name

amqp.method.properties.delivery_mode     Delivery-Mode
Unsigned 8-bit integer
delivery-mode

amqp.method.properties.durable           Durable
Unsigned 8-bit integer
durable

amqp.method.properties.expiration        Expiration
String
expiration

amqp.method.properties.filename           Filename
String
filename

amqp.method.properties.headers            Headers
No value
headers

amqp.method.properties.message_id        Message-Id
String
message-id

amqp.method.properties.priority           Priority
Unsigned 8-bit integer
priority

amqp.method.properties.proxy_name         Proxy-Name
String
proxy-name

amqp.method.properties.reply_to           Reply-To
String
reply-to

amqp.method.properties.timestamp          Timestamp
Unsigned 64-bit integer
timestamp

amqp.method.properties.type              Type
String
type

amqp.method.properties.user_id            User-Id
String
user-id
```

```
amqp.payload  Payload
  Byte array
  Message payload

amqp.type  Type
  Unsigned 8-bit integer
  Frame type
```

**AgentX (agentx)**

```
agentx.c.reason  Reason
  Unsigned 8-bit integer
  close reason

agentx.flags  Flags
  Unsigned 8-bit integer
  header type

agentx.gb.mrepeat  Max Repetition
  Unsigned 16-bit integer
  getBulk Max repetition

agentx.gb.nrepeat  Repeaters
  Unsigned 16-bit integer
  getBulk Num. repeaters

agentx.n_subid  Number subids
  Unsigned 8-bit integer
  Number subids

agentx.o.timeout  Timeout
  Unsigned 8-bit integer
  open timeout

agentx.oid  OID
  String
  OID

agentx.oid_include  OID include
  Unsigned 8-bit integer
  OID include

agentx.oid_prefix  OID prefix
  Unsigned 8-bit integer
  OID prefix

agentx.ostring  Octet String
  String
  Octet String

agentx.ostring_len  OString len
  Unsigned 32-bit integer
  Octet String Length

agentx.packet_id  PacketID
  Unsigned 32-bit integer
  Packet ID

agentx.payload_len  Payload length
  Unsigned 32-bit integer
  Payload length
```

```
agentx.r.error Resp. error
    Unsigned 16-bit integer
    response error

agentx.r.index Resp. index
    Unsigned 16-bit integer
    response index

agentx.r.priority Priority
    Unsigned 8-bit integer
    Register Priority

agentx.r.range_subid Range_subid
    Unsigned 8-bit integer
    Register range_subid

agentx.r.timeout Timeout
    Unsigned 8-bit integer
    Register timeout

agentx.r.upper_bound Upper bound
    Unsigned 32-bit integer
    Register upper bound

agentx.r.uptime sysUpTime
    Unsigned 32-bit integer
    sysUpTime

agentx.session_id sessionID
    Unsigned 32-bit integer
    Session ID

agentx.transaction_id TransactionID
    Unsigned 32-bit integer
    Transaction ID

agentx.type Type
    Unsigned 8-bit integer
    header type

agentx.u.priority Priority
    Unsigned 8-bit integer
    Unegister Priority

agentx.u.range_subid Range_subid
    Unsigned 8-bit integer
    Unegister range_subid

agentx.u.timeout Timeout
    Unsigned 8-bit integer
    Unregister timeout

agentx.u.upper_bound Upper bound
    Unsigned 32-bit integer
    Register upper bound

agentx.v.tag Variable type
    Unsigned 16-bit integer
    vtag

agentx.v.val32 Value(32)
    Unsigned 32-bit integer
    val32
```

agentx.v.val64 Value(64)  
Unsigned 64-bit integer  
val64

agentx.version Version  
Unsigned 8-bit integer  
header version

### **Aggregate Server Access Protocol (asap)**

asap.cause\_code Cause code  
Unsigned 16-bit integer

asap.cause\_info Cause info  
Byte array

asap.cause\_length Cause length  
Unsigned 16-bit integer

asap.cause\_padding Padding  
Byte array

asap.cookie Cookie  
Byte array

asap.h\_bit H bit  
Boolean

asap.ipv4\_address IP Version 4 address  
IPv4 address

asap.ipv6\_address IP Version 6 address  
IPv6 address

asap.message\_flags Flags  
Unsigned 8-bit integer

asap.message\_length Length  
Unsigned 16-bit integer

asap.message\_type Type  
Unsigned 8-bit integer

asap.parameter\_length Parameter length  
Unsigned 16-bit integer

asap.parameter\_padding Padding  
Byte array

asap.parameter\_type Parameter Type  
Unsigned 16-bit integer

asap.parameter\_value Parameter value  
Byte array

  Spare 7

afs.vldb.spare8  Spare 8
  Unsigned 32-bit integer
  Spare 8

afs.vldb.spare9  Spare 9
  Unsigned 32-bit integer
  Spare 9

afs.vldb.type  Volume Type
  Unsigned 32-bit integer
  Volume Type
```

```
afs.vol Volume Server
  Boolean
  Volume Server

afs.vol.count Volume Count
  Unsigned 32-bit integer
  Volume Count

afs.vol.errcode Error Code
  Unsigned 32-bit integer
  Error Code

afs.vol.id Volume ID
  Unsigned 32-bit integer
  Volume ID

afs.vol.name Volume Name
  String
  Volume Name

afs.vol.opcode Operation
  Unsigned 32-bit integer
  Operation
```

#### **Apache JServ Protocol v1.3 (ajp13)**

```
ajp13.code Code
  String
  Type Code

ajp13.data Data
  String
  Data

ajp13.hname HNAME
  String
  Header Name

ajp13.hval HVAL
  String
  Header Value

ajp13.len Length
  Unsigned 16-bit integer
  Data Length

ajp13.magic Magic
  Byte array
  Magic Number

ajp13.method Method
  String
  HTTP Method

ajp13.nhdr NHDR
  Unsigned 16-bit integer
  Num Headers

ajp13.port PORT
  Unsigned 16-bit integer
  Port
```

```
ajp13.raddr  RADDR
             String
             Remote Address

ajp13.reusep  REUSEP
             Unsigned 8-bit integer
             Reuse Connection?

ajp13.rhost  RHOST
             String
             Remote Host

ajp13.rlen   RLEN
             Unsigned 16-bit integer
             Requested Length

ajp13.rmsg   RMSG
             String
             HTTP Status Message

ajp13.rstatus RSTATUS
             Unsigned 16-bit integer
             HTTP Status Code

ajp13.srv    SRV
             String
             Server

ajp13.sslp   SSLP
             Unsigned 8-bit integer
             Is SSL?

ajp13.uri    URI
             String
             HTTP URI

ajp13.ver    Version
             String
             HTTP Version
```

**Apple Filing Protocol (afp)**

```
afp.AFPVersion  AFP Version
                String
                Client AFP version

afp.UAM  UAM
         String
         User Authentication Method

afp.access  Access mode
           Unsigned 8-bit integer
           Fork access mode

afp.access.deny_read  Deny read
                     Boolean
                     Deny read

afp.access.deny_write  Deny write
                      Boolean
                      Deny write
```

```
afp.access.read    Read
                  Boolean
                  Open for reading
afp.access.write  Write
                  Boolean
                  Open for writing
afp.access_bitmap Bitmap
                  Unsigned 16-bit integer
                  Bitmap (reserved)
afp.ace_applicable ACE
                  Byte array
                  ACE applicable
afp.ace_flags     Flags
                  Unsigned 32-bit integer
                  ACE flags
afp.ace_flags.allow Allow
                  Boolean
                  Allow rule
afp.ace_flags.deny Deny
                  Boolean
                  Deny rule
afp.ace_flags.directory_inherit Dir inherit
                  Boolean
                  Dir inherit
afp.ace_flags.file_inherit      File inherit
                  Boolean
                  File inherit
afp.ace_flags.inherited        Inherited
                  Boolean
                  Inherited
afp.ace_flags.limit_inherit     Limit inherit
                  Boolean
                  Limit inherit
afp.ace_flags.only_inherit      Only inherit
                  Boolean
                  Only inherit
afp.ace_rights                  Rights
                  Unsigned 32-bit integer
                  ACE flags
afp.acl_access_bitmap           Bitmap
                  Unsigned 32-bit integer
                  ACL access bitmap
afp.acl_access_bitmap.append_data Append data/create subdir
                  Boolean
                  Append data to a file / create a subdirectory
afp.acl_access_bitmap.change_owner Change owner
                  Boolean
                  Change owner
```

```
afp.acl_access_bitmap.delete    Delete
    Boolean
    Delete

afp.acl_access_bitmap.delete_child  Delete dir
    Boolean
    Delete directory

afp.acl_access_bitmap.execute    Execute/Search
    Boolean
    Execute a program

afp.acl_access_bitmap.generic_all  Generic all
    Boolean
    Generic all

afp.acl_access_bitmap.generic_execute  Generic execute
    Boolean
    Generic execute

afp.acl_access_bitmap.generic_read  Generic read
    Boolean
    Generic read

afp.acl_access_bitmap.generic_write  Generic write
    Boolean
    Generic write

afp.acl_access_bitmap.read_attrs  Read attributes
    Boolean
    Read attributes

afp.acl_access_bitmap.read_data  Read/List
    Boolean
    Read data / list directory

afp.acl_access_bitmap.read_extattrs  Read extended attributes
    Boolean
    Read extended attributes

afp.acl_access_bitmap.read_security  Read security
    Boolean
    Read access rights

afp.acl_access_bitmap.synchronize  Synchronize
    Boolean
    Synchronize

afp.acl_access_bitmap.write_attrs  Write attributes
    Boolean
    Write attributes

afp.acl_access_bitmap.write_data  Write/Add file
    Boolean
    Write data to a file / add a file to a directory

afp.acl_access_bitmap.write_extattrs  Write extended attributes
    Boolean
    Write extended attributes

afp.acl_access_bitmap.write_security  Write security
    Boolean
    Write access rights
```

```
afp.acl_entrycount  Count
    Unsigned 32-bit integer
    Number of ACL entries

afp.acl_flags  ACL flags
    Unsigned 32-bit integer
    ACL flags

afp.acl_list_bitmap  ACL bitmap
    Unsigned 16-bit integer
    ACL control list bitmap

afp.acl_list_bitmap.ACL  ACL
    Boolean
    ACL

afp.acl_list_bitmap.GRPUUID  GRPUUID
    Boolean
    Group UUID

afp.acl_list_bitmap.Inherit  Inherit
    Boolean
    Inherit ACL

afp.acl_list_bitmap.REMOVEACL  Remove ACL
    Boolean
    Remove ACL

afp.acl_list_bitmap.UUID  UUID
    Boolean
    User UUID

afp.actual_count  Count
    Signed 32-bit integer
    Number of bytes returned by read/write

afp.afp_login_flags  Flags
    Unsigned 16-bit integer
    Login flags

afp.appl_index  Index
    Unsigned 16-bit integer
    Application index

afp.appl_tag  Tag
    Unsigned 32-bit integer
    Application tag

afp.backup_date  Backup date
    Date/Time stamp
    Backup date

afp.cat_count  Cat count
    Unsigned 32-bit integer
    Number of structures returned

afp.cat_position  Position
    Byte array
    Reserved

afp.cat_req_matches  Max answers
    Signed 32-bit integer
    Maximum number of matches to return.
```

```
afp.command    Command
               Unsigned 8-bit integer
               AFP function

afp.comment    Comment
               String
               File/folder comment

afp.create_flag  Hard create
               Boolean
               Soft/hard create file

afp.creation_date  Creation date
                 Date/Time stamp
                 Creation date

afp.data_fork_len  Data fork size
                 Unsigned 32-bit integer
                 Data fork size

afp.did         DID
               Unsigned 32-bit integer
               Parent directory ID

afp.dir_ar      Access rights
               Unsigned 32-bit integer
               Directory access rights

afp.dir_ar.blank  Blank access right
                 Boolean
                 Blank access right

afp.dir_ar.e_read  Everyone has read access
                 Boolean
                 Everyone has read access

afp.dir_ar.e_search  Everyone has search access
                   Boolean
                   Everyone has search access

afp.dir_ar.e_write  Everyone has write access
                   Boolean
                   Everyone has write access

afp.dir_ar.g_read  Group has read access
                   Boolean
                   Group has read access

afp.dir_ar.g_search  Group has search access
                    Boolean
                    Group has search access

afp.dir_ar.g_write  Group has write access
                    Boolean
                    Group has write access

afp.dir_ar.o_read  Owner has read access
                   Boolean
                   Owner has read access

afp.dir_ar.o_search  Owner has search access
                    Boolean
                    Owner has search access
```

```
afp.dir_ar.o_write  Owner has write access
  Boolean
  Gwner has write access

afp.dir_ar.u_owner  User is the owner
  Boolean
  Current user is the directory owner

afp.dir_ar.u_read   User has read access
  Boolean
  User has read access

afp.dir_ar.u_search User has search access
  Boolean
  User has search access

afp.dir_ar.u_write  User has write access
  Boolean
  User has write access

afp.dir_attribute.backup_needed  Backup needed
  Boolean
  Directory needs to be backed up

afp.dir_attribute.delete_inhibit  Delete inhibit
  Boolean
  Delete inhibit

afp.dir_attribute.in_exported_folder  Shared area
  Boolean
  Directory is in a shared area

afp.dir_attribute.invisible  Invisible
  Boolean
  Directory is not visible

afp.dir_attribute.mounted  Mounted
  Boolean
  Directory is mounted

afp.dir_attribute.rename_inhibit  Rename inhibit
  Boolean
  Rename inhibit

afp.dir_attribute.set_clear  Set
  Boolean
  Clear/set attribute

afp.dir_attribute.share  Share point
  Boolean
  Directory is a share point

afp.dir_attribute.system  System
  Boolean
  Directory is a system directory

afp.dir_bitmap  Directory bitmap
  Unsigned 16-bit integer
  Directory bitmap

afp.dir_bitmap.UTF8_name  UTF-8 name
  Boolean
  Return UTF-8 name if directory
```

```
afp.dir_bitmap.access_rights  Access rights
    Boolean
    Return access rights if directory
afp.dir_bitmap.attributes    Attributes
    Boolean
    Return attributes if directory
afp.dir_bitmap.backup_date   Backup date
    Boolean
    Return backup date if directory
afp.dir_bitmap.create_date   Creation date
    Boolean
    Return creation date if directory
afp.dir_bitmap.did          DID
    Boolean
    Return parent directory ID if directory
afp.dir_bitmap.fid         File ID
    Boolean
    Return file ID if directory
afp.dir_bitmap.finder_info   Finder info
    Boolean
    Return finder info if directory
afp.dir_bitmap.group_id     Group id
    Boolean
    Return group id if directory
afp.dir_bitmap.long_name    Long name
    Boolean
    Return long name if directory
afp.dir_bitmap.mod_date     Modification date
    Boolean
    Return modification date if directory
afp.dir_bitmap.offspring_count  Offspring count
    Boolean
    Return offspring count if directory
afp.dir_bitmap.owner_id     Owner id
    Boolean
    Return owner id if directory
afp.dir_bitmap.short_name   Short name
    Boolean
    Return short name if directory
afp.dir_bitmap.unix_privs   UNIX privileges
    Boolean
    Return UNIX privileges if directory
afp.dir_group_id           Group ID
    Signed 32-bit integer
    Directory group ID
afp.dir_offspring         Offspring
    Unsigned 16-bit integer
    Directory offspring
```

```
afp.dir_owner_id  Owner ID
Signed 32-bit integer
Directory owner ID

afp.dt_ref  DT ref
Unsigned 16-bit integer
Desktop database reference num

afp.ext_data_fork_len  Extended data fork size
Unsigned 64-bit integer
Extended (>2GB) data fork length

afp.ext_resource_fork_len  Extended resource fork size
Unsigned 64-bit integer
Extended (>2GB) resource fork length

afp.extattr.data  Data
Byte array
Extendend attribute data

afp.extattr.len  Length
Unsigned 32-bit integer
Extended attribute length

afp.extattr.name  Name
String
Extended attribute name

afp.extattr.namelen  Length
Unsigned 16-bit integer
Extended attribute name length

afp.extattr.reply_size  Reply size
Unsigned 32-bit integer
Reply size

afp.extattr.req_count  Request Count
Unsigned 16-bit integer
Request Count.

afp.extattr.start_index  Index
Unsigned 32-bit integer
Start index

afp.extattr_bitmap  Bitmap
Unsigned 16-bit integer
Extended attributes bitmap

afp.extattr_bitmap.create  Create
Boolean
Create extended attribute

afp.extattr_bitmap.nofollow  No follow symlinks
Boolean
Do not follow symlink

afp.extattr_bitmap.replace  Replace
Boolean
Replace extended attribute

afp.file_attribute.backup_needed  Backup needed
Boolean
File needs to be backed up
```

```
afp.file_attribute.copy_protect  Copy protect
  Boolean
  copy protect

afp.file_attribute.delete_inhibit  Delete inhibit
  Boolean
  delete inhibit

afp.file_attribute.df_open  Data fork open
  Boolean
  Data fork already open

afp.file_attribute.invisible  Invisible
  Boolean
  File is not visible

afp.file_attribute.multi_user  Multi user
  Boolean
  multi user

afp.file_attribute.rename_inhibit  Rename inhibit
  Boolean
  rename inhibit

afp.file_attribute.rf_open  Resource fork open
  Boolean
  Resource fork already open

afp.file_attribute.set_clear  Set
  Boolean
  Clear/set attribute

afp.file_attribute.system  System
  Boolean
  File is a system file

afp.file_attribute.write_inhibit  Write inhibit
  Boolean
  Write inhibit

afp.file_bitmap  File bitmap
  Unsigned 16-bit integer
  File bitmap

afp.file_bitmap.UTF8_name  UTF-8 name
  Boolean
  Return UTF-8 name if file

afp.file_bitmap.attributes  Attributes
  Boolean
  Return attributes if file

afp.file_bitmap.backup_date  Backup date
  Boolean
  Return backup date if file

afp.file_bitmap.create_date  Creation date
  Boolean
  Return creation date if file

afp.file_bitmap.data_fork_len  Data fork size
  Boolean
  Return data fork size if file
```

```
afp.file_bitmap.did  DID
  Boolean
  Return parent directory ID if file
afp.file_bitmap.ex_data_fork_len  Extended data fork size
  Boolean
  Return extended (>2GB) data fork size if file
afp.file_bitmap.ex_resource_fork_len  Extended resource fork size
  Boolean
  Return extended (>2GB) resource fork size if file
afp.file_bitmap.fid  File ID
  Boolean
  Return file ID if file
afp.file_bitmap.finder_info  Finder info
  Boolean
  Return finder info if file
afp.file_bitmap.launch_limit  Launch limit
  Boolean
  Return launch limit if file
afp.file_bitmap.long_name  Long name
  Boolean
  Return long name if file
afp.file_bitmap.mod_date  Modification date
  Boolean
  Return modification date if file
afp.file_bitmap.resource_fork_len  Resource fork size
  Boolean
  Return resource fork size if file
afp.file_bitmap.short_name  Short name
  Boolean
  Return short name if file
afp.file_bitmap.unix_privs  UNIX privileges
  Boolean
  Return UNIX privileges if file
afp.file_creator  File creator
  String
  File creator
afp.file_flag  Dir
  Boolean
  Is a dir
afp.file_id  File ID
  Unsigned 32-bit integer
  File/directory ID
afp.file_type  File type
  String
  File type
afp.finder_info  Finder info
  Byte array
  Finder info
```

```
afp.flag From
  Unsigned 8-bit integer
  Offset is relative to start/end of the fork

afp.fork_type Resource fork
  Boolean
  Data/resource fork

afp.group_ID Group ID
  Unsigned 32-bit integer
  Group ID

afp.grpuuid GRPUUID
  Byte array
  Group UUID

afp.icon_index Index
  Unsigned 16-bit integer
  Icon index in desktop database

afp.icon_length Size
  Unsigned 16-bit integer
  Size for icon bitmap

afp.icon_tag Tag
  Unsigned 32-bit integer
  Icon tag

afp.icon_type Icon type
  Unsigned 8-bit integer
  Icon type

afp.last_written Last written
  Unsigned 32-bit integer
  Offset of the last byte written

afp.last_written64 Last written
  Unsigned 64-bit integer
  Offset of the last byte written (64 bits)

afp.lock_from End
  Boolean
  Offset is relative to the end of the fork

afp.lock_len Length
  Signed 32-bit integer
  Number of bytes to be locked/unlocked

afp.lock_len64 Length
  Signed 64-bit integer
  Number of bytes to be locked/unlocked (64 bits)

afp.lock_offset Offset
  Signed 32-bit integer
  First byte to be locked

afp.lock_offset64 Offset
  Signed 64-bit integer
  First byte to be locked (64 bits)

afp.lock_op unlock
  Boolean
  Lock/unlock op
```

```
afp.lock_range_start  Start
    Signed 32-bit integer
    First byte locked/unlocked

afp.lock_range_start64  Start
    Signed 64-bit integer
    First byte locked/unlocked (64 bits)

afp.long_name_offset  Long name offset
    Unsigned 16-bit integer
    Long name offset in packet

afp.map_id  ID
    Unsigned 32-bit integer
    User/Group ID

afp.map_id_type  Type
    Unsigned 8-bit integer
    Map ID type

afp.map_name  Name
    String
    User/Group name

afp.map_name_type  Type
    Unsigned 8-bit integer
    Map name type

afp.message  Message
    String
    Message

afp.message_bitmap  Bitmap
    Unsigned 16-bit integer
    Message bitmap

afp.message_bitmap.requested  Request message
    Boolean
    Message Requested

afp.message_bitmap.utf8  Message is UTF8
    Boolean
    Message is UTF8

afp.message_length  Len
    Unsigned 32-bit integer
    Message length

afp.message_type  Type
    Unsigned 16-bit integer
    Type of server message

afp.modification_date  Modification date
    Date/Time stamp
    Modification date

afp.newline_char  Newline char
    Unsigned 8-bit integer
    Value to compare ANDed bytes with when looking for newline

afp.newline_mask  Newline mask
    Unsigned 8-bit integer
    Value to AND bytes with when looking for newline
```

```
afp.offset  Offset
           Signed 32-bit integer
           Offset

afp.offset64  Offset
           Signed 64-bit integer
           Offset (64 bits)

afp.ofork  Fork
           Unsigned 16-bit integer
           Open fork reference number

afp.ofork_len  New length
           Signed 32-bit integer
           New length

afp.ofork_len64  New length
           Signed 64-bit integer
           New length (64 bits)

afp.pad  Pad
           No value
           Pad Byte

afp.passwd  Password
           String
           Password

afp.path_len  Len
           Unsigned 8-bit integer
           Path length

afp.path_name  Name
           String
           Path name

afp.path_type  Type
           Unsigned 8-bit integer
           Type of names

afp.path_unicode_hint  Unicode hint
           Unsigned 32-bit integer
           Unicode hint

afp.path_unicode_len  Len
           Unsigned 16-bit integer
           Path length (unicode)

afp.random  Random number
           Byte array
           UAM random number

afp.reply_size  Reply size
           Unsigned 16-bit integer
           Reply size

afp.reply_size32  Reply size
           Unsigned 32-bit integer
           Reply size

afp.req_count  Req count
           Unsigned 16-bit integer
           Maximum number of structures returned
```

```
afp.reqcount64    Count
                  Signed 64-bit integer
                  Request Count (64 bits)

afp.request_bitmap    Request bitmap
                      Unsigned 32-bit integer
                      Request bitmap

afp.request_bitmap.UTF8_name    UTF-8 name
                                Boolean
                                Search UTF-8 name

afp.request_bitmap.attributes    Attributes
                                Boolean
                                Search attributes

afp.request_bitmap.backup_date    Backup date
                                Boolean
                                Search backup date

afp.request_bitmap.create_date    Creation date
                                Boolean
                                Search creation date

afp.request_bitmap.data_fork_len    Data fork size
                                Boolean
                                Search data fork size

afp.request_bitmap.did    DID
                            Boolean
                            Search parent directory ID

afp.request_bitmap.ex_data_fork_len    Extended data fork size
                                Boolean
                                Search extended (>2GB) data fork size

afp.request_bitmap.ex_resource_fork_len    Extended resource fork size
                                Boolean
                                Search extended (>2GB) resource fork size

afp.request_bitmap.finder_info    Finder info
                                Boolean
                                Search finder info

afp.request_bitmap.long_name    Long name
                                Boolean
                                Search long name

afp.request_bitmap.mod_date    Modification date
                                Boolean
                                Search modification date

afp.request_bitmap.offspring_count    Offspring count
                                Boolean
                                Search offspring count

afp.request_bitmap.partial_names    Match on partial names
                                Boolean
                                Match on partial names

afp.request_bitmap.resource_fork_len    Resource fork size
                                Boolean
                                Search resource fork size
```

afp.reserved Reserved  
Byte array  
Reserved

afp.resource\_fork\_len Resource fork size  
Unsigned 32-bit integer  
Resource fork size

afp.response\_in Response in  
Frame number  
The response to this packet is in this packet

afp.response\_to Response to  
Frame number  
This packet is a response to the packet in this frame

afp.rw\_count Count  
Signed 32-bit integer  
Number of bytes to be read/written

afp.rw\_count64 Count  
Signed 64-bit integer  
Number of bytes to be read/written (64 bits)

afp.server\_time Server time  
Date/Time stamp  
Server time

afp.session\_token Token  
Byte array  
Session token

afp.session\_token\_len Len  
Unsigned 32-bit integer  
Session token length

afp.session\_token\_timestamp Time stamp  
Unsigned 32-bit integer  
Session time stamp

afp.session\_token\_type Type  
Unsigned 16-bit integer  
Session token type

afp.short\_name\_offset Short name offset  
Unsigned 16-bit integer  
Short name offset in packet

afp.start\_index Start index  
Unsigned 16-bit integer  
First structure returned

afp.start\_index32 Start index  
Unsigned 32-bit integer  
First structure returned

afp.struct\_size Struct size  
Unsigned 8-bit integer  
Sizeof of struct

afp.struct\_size16 Struct size  
Unsigned 16-bit integer  
Sizeof of struct

```
afp.time      Time from request
              Time duration
              Time between Request and Response for AFP cmds

afp.unicode_name_offset  Unicode name offset
                          Unsigned 16-bit integer
                          Unicode name offset in packet

afp.unix_privs.gid      GID
                          Unsigned 32-bit integer
                          Group ID

afp.unix_privs.permissions  Permissions
                          Unsigned 32-bit integer
                          Permissions

afp.unix_privs.ua_permissions  User's access rights
                          Unsigned 32-bit integer
                          User's access rights

afp.unix_privs.uid      UID
                          Unsigned 32-bit integer
                          User ID

afp.user      User
              String
              User

afp.user_ID    User ID
               Unsigned 32-bit integer
               User ID

afp.user_bitmap  Bitmap
                 Unsigned 16-bit integer
                 User Info bitmap

afp.user_bitmap.GID  Primary group ID
                     Boolean
                     Primary group ID

afp.user_bitmap.UID  User ID
                     Boolean
                     User ID

afp.user_bitmap.UUID  UUID
                      Boolean
                      UUID

afp.user_flag  Flag
               Unsigned 8-bit integer
               User Info flag

afp.user_len  Len
              Unsigned 16-bit integer
              User name length (unicode)

afp.user_name  User
               String
               User name (unicode)

afp.user_type  Type
               Unsigned 8-bit integer
               Type of user name
```

```
afp.uuid    UUID
            Byte array
            UUID

afp.vol_attribute.acls    ACLs
            Boolean
            Supports access control lists

afp.vol_attribute.blank_access_privs    Blank access privileges
            Boolean
            Supports blank access privileges

afp.vol_attribute.cat_search    Catalog search
            Boolean
            Supports catalog search operations

afp.vol_attribute.extended_attributes    Extended Attributes
            Boolean
            Supports Extended Attributes

afp.vol_attribute.fileIDs    File IDs
            Boolean
            Supports file IDs

afp.vol_attribute.inherit_parent_privs    Inherit parent privileges
            Boolean
            Inherit parent privileges

afp.vol_attribute.network_user_id    No Network User ID
            Boolean
            No Network User ID

afp.vol_attribute.no_exchange_files    No exchange files
            Boolean
            Exchange files not supported

afp.vol_attribute.passwd    Volume password
            Boolean
            Has a volume password

afp.vol_attribute.read_only    Read only
            Boolean
            Read only volume

afp.vol_attribute.unix_privs    UNIX access privileges
            Boolean
            Supports UNIX access privileges

afp.vol_attribute.utf8_names    UTF-8 names
            Boolean
            Supports UTF-8 names

afp.vol_attributes    Attributes
            Unsigned 16-bit integer
            Volume attributes

afp.vol_backup_date    Backup date
            Date/Time stamp
            Volume backup date

afp.vol_bitmap    Bitmap
            Unsigned 16-bit integer
            Volume bitmap
```

```
afp.vol_bitmap.attributes  Attributes
    Boolean
    Volume attributes

afp.vol_bitmap.backup_date  Backup date
    Boolean
    Volume backup date

afp.vol_bitmap.block_size  Block size
    Boolean
    Volume block size

afp.vol_bitmap.bytes_free  Bytes free
    Boolean
    Volume free bytes

afp.vol_bitmap.bytes_total  Bytes total
    Boolean
    Volume total bytes

afp.vol_bitmap.create_date  Creation date
    Boolean
    Volume creation date

afp.vol_bitmap.ex_bytes_free  Extended bytes free
    Boolean
    Volume extended (>2GB) free bytes

afp.vol_bitmap.ex_bytes_total  Extended bytes total
    Boolean
    Volume extended (>2GB) total bytes

afp.vol_bitmap.id  ID
    Boolean
    Volume ID

afp.vol_bitmap.mod_date  Modification date
    Boolean
    Volume modification date

afp.vol_bitmap.name  Name
    Boolean
    Volume name

afp.vol_bitmap.signature  Signature
    Boolean
    Volume signature

afp.vol_block_size  Block size
    Unsigned 32-bit integer
    Volume block size

afp.vol_bytes_free  Bytes free
    Unsigned 32-bit integer
    Free space

afp.vol_bytes_total  Bytes total
    Unsigned 32-bit integer
    Volume size

afp.vol_creation_date  Creation date
    Date/Time stamp
    Volume creation date
```

```
afp.vol_ex_bytes_free  Extended bytes free
    Unsigned 64-bit integer
    Extended (>2GB) free space

afp.vol_ex_bytes_total  Extended bytes total
    Unsigned 64-bit integer
    Extended (>2GB) volume size

afp.vol_flag_passwd    Password
    Boolean
    Volume is password-protected

afp.vol_flag_unix_priv  Unix privs
    Boolean
    Volume has unix privileges

afp.vol_id             Volume id
    Unsigned 16-bit integer
    Volume id

afp.vol_modification_date  Modification date
    Date/Time stamp
    Volume modification date

afp.vol_name           Volume
    String
    Volume name

afp.vol_name_offset     Volume name offset
    Unsigned 16-bit integer
    Volume name offset in packet

afp.vol_signature       Signature
    Unsigned 16-bit integer
    Volume signature
```

#### **Apple IP-over-IEEE 1394 (ap1394)**

```
ap1394.dst             Destination
    Byte array
    Destination address

ap1394.src             Source
    Byte array
    Source address

ap1394.type            Type
    Unsigned 16-bit integer
```

#### **AppleTalk Session Protocol (asp)**

```
asp.attn_code          Attn code
    Unsigned 16-bit integer
    asp attention code

asp.error              asp error
    Signed 32-bit integer
    return error code

asp.function           asp function
    Unsigned 8-bit integer
    asp function
```

```
asp.init_error  Error
  Unsigned 16-bit integer
  asp init error

asp.seq  Sequence
  Unsigned 16-bit integer
  asp sequence number

asp.server_addr.len  Length
  Unsigned 8-bit integer
  Address length.

asp.server_addr.type  Type
  Unsigned 8-bit integer
  Address type.

asp.server_addr.value  Value
  Byte array
  Address value

asp.server_directory  Directory service
  String
  Server directory service

asp.server_flag  Flag
  Unsigned 16-bit integer
  Server capabilities flag

asp.server_flag.copyfile  Support copyfile
  Boolean
  Server support copyfile

asp.server_flag.directory  Support directory services
  Boolean
  Server support directory services

asp.server_flag.fast_copy  Support fast copy
  Boolean
  Server support fast copy

asp.server_flag.no_save_passwd  Don't allow save password
  Boolean
  Don't allow save password

asp.server_flag.notify  Support server notifications
  Boolean
  Server support notifications

asp.server_flag.passwd  Support change password
  Boolean
  Server support change password

asp.server_flag.reconnect  Support server reconnect
  Boolean
  Server support reconnect

asp.server_flag.srv_msg  Support server message
  Boolean
  Support server message

asp.server_flag.srv_sig  Support server signature
  Boolean
  Support server signature
```

```
asp.server_flag.tcpip  Support TCP/IP
  Boolean
  Server support TCP/IP

asp.server_flag.utf8_name  Support UTF8 server name
  Boolean
  Server support UTF8 server name

asp.server_icon  Icon bitmap
  Byte array
  Server icon bitmap

asp.server_name  Server name
  String
  Server name

asp.server_signature  Server signature
  Byte array
  Server signature

asp.server_type  Server type
  String
  Server type

asp.server_uams  UAM
  String
  UAM

asp.server_utf8_name  Server name (UTF8)
  String
  Server name (UTF8)

asp.server_utf8_name_len  Server name length
  Unsigned 16-bit integer
  UTF8 server name length

asp.server_vers  AFP version
  String
  AFP version

asp.session_id  Session ID
  Unsigned 8-bit integer
  asp session id

asp.size  size
  Unsigned 16-bit integer
  asp available size for reply

asp.socket  Socket
  Unsigned 8-bit integer
  asp socket

asp.version  Version
  Unsigned 16-bit integer
  asp version

asp.zero_value  Pad (0)
  Byte array
  Pad
```

**AppleTalk Transaction Protocol packet (atp)**

```
atp.bitmap Bitmap
    Unsigned 8-bit integer
    Bitmap or sequence number

atp.ctrlinfo Control info
    Unsigned 8-bit integer
    control info

atp.eom EOM
    Boolean
    End-of-message

atp.fragment ATP Fragment
    Frame number
    ATP Fragment

atp.fragments ATP Fragments
    No value
    ATP Fragments

atp.function Function
    Unsigned 8-bit integer
    function code

atp.reassembled_in Reassembled ATP in frame
    Frame number
    This ATP packet is reassembled in this frame

atp.segment.error Desegmentation error
    Frame number
    Desegmentation error due to illegal segments

atp.segment.multipletails Multiple tail segments found
    Boolean
    Several tails were found when desegmenting the packet

atp.segment.overlap Segment overlap
    Boolean
    Segment overlaps with other segments

atp.segment.overlap.conflict Conflicting data in segment overlap
    Boolean
    Overlapping segments contained conflicting data

atp.segment.toolongsegment Segment too long
    Boolean
    Segment contained data past end of packet

atp.sts STS
    Boolean
    Send transaction status

atp.tid TID
    Unsigned 16-bit integer
    Transaction id

atp.treltimer TRel timer
    Unsigned 8-bit integer
    TRel timer
```

```
atp.user_bytes  User bytes
                Unsigned 32-bit integer
                User bytes

atp.xo         X0
                Boolean
                Exactly-once flag
```

#### **Appletalk Address Resolution Protocol (arp)**

```
arp.dst.hw     Target hardware address
                Byte array

arp.dst.hw_mac Target MAC address
                6-byte Hardware (MAC) Address

arp.dst.proto  Target protocol address
                Byte array

arp.dst.proto_id Target ID
                Byte array

arp.hard.size  Hardware size
                Unsigned 8-bit integer

arp.hard.type  Hardware type
                Unsigned 16-bit integer

arp.opcode     Opcode
                Unsigned 16-bit integer

arp.proto.size Protocol size
                Unsigned 8-bit integer

arp.proto.type Protocol type
                Unsigned 16-bit integer

arp.src.hw     Sender hardware address
                Byte array

arp.src.hw_mac Sender MAC address
                6-byte Hardware (MAC) Address

arp.src.proto  Sender protocol address
                Byte array

arp.src.proto_id Sender ID
                Byte array
```

#### **Application Configuration Access Protocol (acap)**

```
acap.request   Request
                Boolean
                TRUE if ACAP request

acap.response  Response
                Boolean
                TRUE if ACAP response
```

#### **Architecture for Control Networks (acn)**

```
acn.acn_reciprocal_channel Reciprocal Channel Number
                Unsigned 16-bit integer
                Reciprocal Channel
```

```
acn.acn_refuse_code  Refuse Code
    Unsigned 8-bit integer
acn.association      Association
    Unsigned 16-bit integer
acn.channel_number   Channel Number
    Unsigned 16-bit integer
acn.cid              CID
acn.client_protocol_id  Client Protocol ID
    Unsigned 32-bit integer
acn.dmp_address      Address
    Unsigned 8-bit integer
acn.dmp_address_data_pairs  Address-Data Pairs
    Byte array
    More address-data pairs
acn.dmp_adt          Address and Data Type
    Unsigned 8-bit integer
acn.dmp_adt_a        Size
    Unsigned 8-bit integer
acn.dmp_adt_d        Data Type
    Unsigned 8-bit integer
acn.dmp_adt_r        Relative
    Unsigned 8-bit integer
acn.dmp_adt_v        Virtual
    Unsigned 8-bit integer
acn.dmp_adt_x        Reserved
    Unsigned 8-bit integer
acn.dmp_data         Data
    Byte array
acn.dmp_data16       Addr
    Unsigned 16-bit integer
    Data16
acn.dmp_data24       Addr
    Unsigned 24-bit integer
    Data24
acn.dmp_data32       Addr
    Unsigned 32-bit integer
    Data32
acn.dmp_data8        Addr
    Unsigned 8-bit integer
    Data8
acn.dmp_reason_code  Reason Code
    Unsigned 8-bit integer
acn.dmp_vector       DMP Vector
    Unsigned 8-bit integer
```

```
acn.dmx.count    Count
                 Unsigned 16-bit integer
                 DMX Count

acn.dmx.increment Increment
                 Unsigned 16-bit integer
                 DMX Increment

acn.dmx.priority Priority
                 Unsigned 8-bit integer
                 DMX Priority

acn.dmx.seq_number Seq No
                 Unsigned 8-bit integer
                 DMX Sequence Number

acn.dmx.source_name Source
                 String
                 DMX Source Name

acn.dmx.start_code Start Code
                 Unsigned 16-bit integer
                 DMX Start Code

acn.dmx.universe Universe
                 Unsigned 16-bit integer
                 DMX Universe

acn.dmx_vector  Vector
                 Unsigned 32-bit integer
                 DMX Vector

acn.expiry      Expiry
                 Unsigned 16-bit integer

acn.first_member_to_ack First Member to ACK
                 Unsigned 16-bit integer

acn.first_missed_sequence First Missed Sequence
                 Unsigned 32-bit integer

acn.ip_address_type Addr Type
                 Unsigned 8-bit integer

acn.ipv4        IPV4
                 IPv4 address

acn.ipv6        IPV6
                 IPv6 address

acn.last_member_to_ack Last Member to ACK
                 Unsigned 16-bit integer

acn.last_missed_sequence Last Missed Sequence
                 Unsigned 32-bit integer

acn.mak_threshold MAK Threshold
                 Unsigned 16-bit integer

acn.member_id   Member ID
                 Unsigned 16-bit integer

acn.nak_holdoff NAK holdoff (ms)
                 Unsigned 16-bit integer
```

```
acn.nak_max_wait  NAK Max Wait (ms)
    Unsigned 16-bit integer
acn.nak_modulus  NAK Modulus
    Unsigned 16-bit integer
acn.nak_outbound_flag  NAK Outbound Flag
    Boolean
acn.oldest_available_wrapper  Oldest Available Wrapper
    Unsigned 32-bit integer
acn.packet_identifier  Packet Identifier
    String
acn.pdu  PDU
    No value
acn.pdu.flag_d  Data
    Boolean
    Data flag
acn.pdu.flag_h  Header
    Boolean
    Header flag
acn.pdu.flag_l  Length
    Boolean
    Length flag
acn.pdu.flag_v  Vector
    Boolean
    Vector flag
acn.pdu.flags  Flags
    Unsigned 8-bit integer
    PDU Flags
acn.port  Port
    Unsigned 16-bit integer
acn.postamble_size  Size of postamble
    Unsigned 16-bit integer
    Postamble size in bytes
acn.preamble_size  Size of preamble
    Unsigned 16-bit integer
    Preamble size in bytes
acn.protocol_id  Protocol ID
    Unsigned 32-bit integer
acn.reason_code  Reason Code
    Unsigned 8-bit integer

### Art-Net (artnet)

artnet.tod\_control ArtTodControl packet  
No value  
Art-Net ArtTodControl packet

artnet.address ArtAddress packet  
No value  
Art-Net ArtAddress packet

artnet.address.command Command  
Unsigned 8-bit integer  
Command

artnet.address.long\_name Long Name  
String  
Long Name

artnet.address.short\_name Short Name  
String  
Short Name

artnet.address.subswitch Subswitch  
Unsigned 8-bit integer  
Subswitch

artnet.address.swin Input Subswitch  
No value  
Input Subswitch

artnet.address.swin\_1 Input Subswitch of Port 1  
Unsigned 8-bit integer  
Input Subswitch of Port 1

artnet.address.swin\_2 Input Subswitch of Port 2  
Unsigned 8-bit integer  
Input Subswitch of Port 2

artnet.address.swin\_3 Input Subswitch of Port 3  
Unsigned 8-bit integer  
Input Subswitch of Port 3

artnet.address.swin\_4 Input Subswitch of Port 4  
Unsigned 8-bit integer  
Input Subswitch of Port 4

artnet.address.swout Output Subswitch  
No value  
Output Subswitch

artnet.address.swout\_1 Output Subswitch of Port 1  
Unsigned 8-bit integer  
Output Subswitch of Port 1

artnet.address.swout\_2 Output Subswitch of Port 2  
Unsigned 8-bit integer  
Output Subswitch of Port 2

```
artnet.address.swout_3  Output Subswitch of Port 3
    Unsigned 8-bit integer
    Output Subswitch of Port 3
artnet.address.swout_4  Output Subswitch of Port 4
    Unsigned 8-bit integer
    Output Subswitch of Port 4
artnet.address.swvideo  SwVideo
    Unsigned 8-bit integer
    SwVideo
artnet.filler  filler
    Byte array
    filler
artnet.firmware_master  ArtFirmwareMaster packet
    No value
    Art-Net ArtFirmwareMaster packet
artnet.firmware_master.block_id  Block ID
    Unsigned 8-bit integer
    Block ID
artnet.firmware_master.data  data
    Byte array
    data
artnet.firmware_master.length  Length
    Unsigned 32-bit integer
    Length
artnet.firmware_master.type  Type
    Unsigned 8-bit integer
    Number of Ports
artnet.firmware_reply  ArtFirmwareReply packet
    No value
    Art-Net ArtFirmwareReply packet
artnet.firmware_reply.type  Type
    Unsigned 8-bit integer
    Number of Ports
artnet.header  Descriptor Header
    No value
    Art-Net Descriptor Header
artnet.header.id  ID
    String
    ArtNET ID
artnet.header.opcode  Opcode
    Unsigned 16-bit integer
    Art-Net message type
artnet.header.protver  ProVer
    Unsigned 16-bit integer
    Protocol revision number
artnet.input  ArtInput packet
    No value
    Art-Net ArtInput packet
```

```
artnet.input.input  Port Status
    No value
    Port Status

artnet.input.input_1  Status of Port 1
    Unsigned 8-bit integer
    Status of Port 1

artnet.input.input_2  Status of Port 2
    Unsigned 8-bit integer
    Status of Port 2

artnet.input.input_3  Status of Port 3
    Unsigned 8-bit integer
    Status of Port 3

artnet.input.input_4  Status of Port 4
    Unsigned 8-bit integer
    Status of Port 4

artnet.input.num_ports  Number of Ports
    Unsigned 16-bit integer
    Number of Ports

artnet.ip_prog  ArtIpProg packet
    No value
    ArtNET ArtIpProg packet

artnet.ip_prog.command  Command
    Unsigned 8-bit integer
    Command

artnet.ip_prog.command_prog_enable  Enable Programming
    Unsigned 8-bit integer
    Enable Programming

artnet.ip_prog.command_prog_ip  Program IP
    Unsigned 8-bit integer
    Program IP

artnet.ip_prog.command_prog_port  Program Port
    Unsigned 8-bit integer
    Program Port

artnet.ip_prog.command_prog_sm  Program Subnet Mask
    Unsigned 8-bit integer
    Program Subnet Mask

artnet.ip_prog.command_reset  Reset parameters
    Unsigned 8-bit integer
    Reset parameters

artnet.ip_prog.command_unused  Unused
    Unsigned 8-bit integer
    Unused

artnet.ip_prog.ip  IP Address
    IPv4 address
    IP Address

artnet.ip_prog.port  Port
    Unsigned 16-bit integer
    Port
```

```
artnet.ip_prog.sm Subnet mask
    IPv4 address
    IP Subnet mask

artnet.ip_prog_reply ArtIpProgReply packet
    No value
    Art-Net ArtIpProgReply packet

artnet.ip_prog_reply.ip IP Address
    IPv4 address
    IP Address

artnet.ip_prog_reply.port Port
    Unsigned 16-bit integer
    Port

artnet.ip_prog_reply.sm Subnet mask
    IPv4 address
    IP Subnet mask

artnet.output ArtDMX packet
    No value
    Art-Net ArtDMX packet

artnet.output.data DMX data
    No value
    DMX Data

artnet.output.data_filter DMX data filter
    Byte array
    DMX Data Filter

artnet.output.dmx_data DMX data
    No value
    DMX Data

artnet.output.length Length
    Unsigned 16-bit integer
    Length

artnet.output.physical Physical
    Unsigned 8-bit integer
    Physical

artnet.output.sequence Sequence
    Unsigned 8-bit integer
    Sequence

artnet.output.universe Universe
    Unsigned 16-bit integer
    Universe

artnet.poll ArtPoll packet
    No value
    Art-Net ArtPoll packet

artnet.poll.talktome TalkToMe
    Unsigned 8-bit integer
    TalkToMe

artnet.poll.talktome_reply_dest Reply destination
    Unsigned 8-bit integer
    Reply destination
```

```
artnet.poll.talktome_reply_type  Reply type
    Unsigned 8-bit integer
    Reply type

artnet.poll.talktome_unused      unused
    Unsigned 8-bit integer
    unused

artnet.poll_reply               ArtPollReply packet
    No value
    Art-Net ArtPollReply packet

artnet.poll_reply.esta_man       ESTA Code
    Unsigned 16-bit integer
    ESTA Code

artnet.poll_reply.good_input     Input Status
    No value
    Input Status

artnet.poll_reply.good_input_1   Input status of Port 1
    Unsigned 8-bit integer
    Input status of Port 1

artnet.poll_reply.good_input_2   Input status of Port 2
    Unsigned 8-bit integer
    Input status of Port 2

artnet.poll_reply.good_input_3   Input status of Port 3
    Unsigned 8-bit integer
    Input status of Port 3

artnet.poll_reply.good_input_4   Input status of Port 4
    Unsigned 8-bit integer
    Input status of Port 4

artnet.poll_reply.good_output    Output Status
    No value
    Port output status

artnet.poll_reply.good_output_1  Output status of Port 1
    Unsigned 8-bit integer
    Output status of Port 1

artnet.poll_reply.good_output_2  Output status of Port 2
    Unsigned 8-bit integer
    Output status of Port 2

artnet.poll_reply.good_output_3  Output status of Port 3
    Unsigned 8-bit integer
    Output status of Port 3

artnet.poll_reply.good_output_4  Output status of Port 4
    Unsigned 8-bit integer
    Outpus status of Port 4

artnet.poll_reply.ip_address     IP Address
    IPv4 address
    IP Address

artnet.poll_reply.long_name      Long Name
    String
    Long Name
```

```
artnet.poll_reply.mac    MAC
    6-byte Hardware (MAC) Address
    MAC

artnet.poll_reply.node_report  Node Report
    String
    Node Report

artnet.poll_reply.num_ports  Number of Ports
    Unsigned 16-bit integer
    Number of Ports

artnet.poll_reply.oem    Oem
    Unsigned 16-bit integer
    OEM

artnet.poll_reply.port_info  Port Info
    No value
    Port Info

artnet.poll_reply.port_nr    Port number
    Unsigned 16-bit integer
    Port Number

artnet.poll_reply.port_types  Port Types
    No value
    Port Types

artnet.poll_reply.port_types_1  Type of Port 1
    Unsigned 8-bit integer
    Type of Port 1

artnet.poll_reply.port_types_2  Type of Port 2
    Unsigned 8-bit integer
    Type of Port 2

artnet.poll_reply.port_types_3  Type of Port 3
    Unsigned 8-bit integer
    Type of Port 3

artnet.poll_reply.port_types_4  Type of Port 4
    Unsigned 8-bit integer
    Type of Port 4

artnet.poll_reply.short_name  Short Name
    String
    Short Name

artnet.poll_reply.status    Status
    Unsigned 8-bit integer
    Status

artnet.poll_reply.subswitch  SubSwitch
    Unsigned 16-bit integer
    Subswitch version

artnet.poll_reply.swin    Input Subswitch
    No value
    Input Subswitch

artnet.poll_reply.swin_1    Input Subswitch of Port 1
    Unsigned 8-bit integer
    Input Subswitch of Port 1
```

```
artnet.poll_reply.swin_2  Input Subswitch of Port 2
    Unsigned 8-bit integer
    Input Subswitch of Port 2
artnet.poll_reply.swin_3  Input Subswitch of Port 3
    Unsigned 8-bit integer
    Input Subswitch of Port 3
artnet.poll_reply.swin_4  Input Subswitch of Port 4
    Unsigned 8-bit integer
    Input Subswitch of Port 4
artnet.poll_reply.swmacro  SwMacro
    Unsigned 8-bit integer
    SwMacro
artnet.poll_reply.swout  Output Subswitch
    No value
    Output Subswitch
artnet.poll_reply.swout_1  Output Subswitch of Port 1
    Unsigned 8-bit integer
    Output Subswitch of Port 1
artnet.poll_reply.swout_2  Output Subswitch of Port 2
    Unsigned 8-bit integer
    Output Subswitch of Port 2
artnet.poll_reply.swout_3  Output Subswitch of Port 3
    Unsigned 8-bit integer
    Output Subswitch of Port 3
artnet.poll_reply.swout_4  Output Subswitch of Port 4
    Unsigned 8-bit integer
    Output Subswitch of Port 4
artnet.poll_reply.swremote  SwRemote
    Unsigned 8-bit integer
    SwRemote
artnet.poll_reply.swvideo  SwVideo
    Unsigned 8-bit integer
    SwVideo
artnet.poll_reply.ubea_version  UBEA Version
    Unsigned 8-bit integer
    UBEA version number
artnet.poll_reply.versinfo  Version Info
    Unsigned 16-bit integer
    Version info
artnet.poll_server_reply  ArtPollServerReply packet
    No value
    Art-Net ArtPollServerReply packet
artnet.rdm  ArtRdm packet
    No value
    Art-Net ArtRdm packet
artnet.rdm.address  Address
    Unsigned 8-bit integer
    Address
```

```
artnet.rdm.command  Command
    Unsigned 8-bit integer
    Command

artnet.spare  spare
    Byte array
    spare

artnet.tod_control.command  Command
    Unsigned 8-bit integer
    Command

artnet.tod_data  ArtTodData packet
    No value
    Art-Net ArtTodData packet

artnet.tod_data.address  Address
    Unsigned 8-bit integer
    Address

artnet.tod_data.block_count  Block Count
    Unsigned 8-bit integer
    Block Count

artnet.tod_data.command_response  Command Response
    Unsigned 8-bit integer
    Command Response

artnet.tod_data.port  Port
    Unsigned 8-bit integer
    Port

artnet.tod_data.tod  TOD
    Byte array
    TOD

artnet.tod_data.uid_count  UID Count
    Unsigned 8-bit integer
    UID Count

artnet.tod_data.uid_total  UID Total
    Unsigned 16-bit integer
    UID Total

artnet.tod_request  ArtTodRequest packet
    No value
    Art-Net ArtTodRequest packet

artnet.tod_request.ad_count  Address Count
    Unsigned 8-bit integer
    Address Count

artnet.tod_request.address  Address
    Byte array
    Address

artnet.tod_request.command  Command
    Unsigned 8-bit integer
    Command

artnet.video_data  ArtVideoData packet
    No value
    Art-Net ArtVideoData packet
```

```
artnet.video_data.data  Video Data
    Byte array
    Video Data

artnet.video_data.len_x  LenX
    Unsigned 8-bit integer
    LenX

artnet.video_data.len_y  LenY
    Unsigned 8-bit integer
    LenY

artnet.video_data.pos_x  PosX
    Unsigned 8-bit integer
    PosX

artnet.video_data.pos_y  PosY
    Unsigned 8-bit integer
    PosY

artnet.video_palette  ArtVideoPalette packet
    No value
    Art-Net ArtVideoPalette packet

artnet.video_palette.colour_blue  Colour Blue
    Byte array
    Colour Blue

artnet.video_palette.colour_green  Colour Green
    Byte array
    Colour Green

artnet.video_palette.colour_red  Colour Red
    Byte array
    Colour Red

artnet.video_setup  ArtVideoSetup packet
    No value
    ArtNET ArtVideoSetup packet

artnet.video_setup.control  control
    Unsigned 8-bit integer
    control

artnet.video_setup.first_font  First Font
    Unsigned 8-bit integer
    First Font

artnet.video_setup.font_data  Font data
    Byte array
    Font Date

artnet.video_setup.font_height  Font Height
    Unsigned 8-bit integer
    Font Height

artnet.video_setup.last_font  Last Font
    Unsigned 8-bit integer
    Last Font

artnet.video_setup.win_font_name  Windows Font Name
    String
    Windows Font Name
```

**Aruba – Aruba Discovery Protocol (adp)**

adp.id Transaction ID  
Unsigned 16-bit integer  
ADP transaction ID

actrace.cas.function Function
    Signed 32-bit integer
    Function
actrace.cas.next_state Next State
    Signed 32-bit integer
    Next State
```

actrace.cas.par0 Parameter 0  
Signed 32-bit integer  
Parameter 0

actrace.cas.par1 Parameter 1  
Signed 32-bit integer  
Parameter 1

actrace.cas.par2 Parameter 2  
Signed 32-bit integer  
Parameter 2

actrace.cas.source Source  
Signed 32-bit integer  
Source

actrace.cas.time Time  
Signed 32-bit integer  
Capture Time

actrace.cas.trunk Trunk Number  
Signed 32-bit integer  
Trunk Number

actrace.isdn.dir Direction  
Signed 32-bit integer  
Direction

actrace.isdn.length Length  
Signed 16-bit integer  
Length

actrace.isdn.trunk Trunk Number  
Signed 16-bit integer  
Trunk Number

**Authentication Header (ah)**

ah.icv AH ICV  
Byte array  
IP Authentication Header Integrity Check Value

ah.sequence AH Sequence  
Unsigned 32-bit integer  
IP Authentication Header Sequence Number

ah.spi AH SPI  
Unsigned 32-bit integer  
IP Authentication Header Security Parameters Index

**BACnet Virtual Link Control (bvlc)**

bvlc.bdt\_ip IP  
IPv4 address  
BDT IP

bvlc.bdt\_mask Mask  
Byte array  
BDT Broadcast Distribution Mask

```
bvlc.bdt_port  Port
    Unsigned 16-bit integer
    BDT Port

bvlc.fdt_ip    IP
    IPv4 address
    FDT IP

bvlc.fdt_port  Port
    Unsigned 16-bit integer
    FDT Port

bvlc.fdt_timeout  Timeout
    Unsigned 16-bit integer
    Foreign Device Timeout (seconds)

bvlc.fdt_ttl   TTL
    Unsigned 16-bit integer
    Foreign Device Time To Live

bvlc.function  Function
    Unsigned 8-bit integer
    BVLC Function

bvlc.fwd_ip    IP
    IPv4 address
    FWD IP

bvlc.fwd_port  Port
    Unsigned 16-bit integer
    FWD Port

bvlc.length   BVLC-Length
    Unsigned 16-bit integer
    Length of BVLC

bvlc.reg_ttl  TTL
    Unsigned 16-bit integer
    Foreign Device Time To Live

bvlc.result   Result
    Unsigned 16-bit integer
    Result Code

bvlc.type     Type
    Unsigned 8-bit integer
    Type
```

**BCTP Q.1990 (bctp)**

```
bctp.bvei  BVEI
    Unsigned 16-bit integer
    BCTP Version Error Indicator

bctp.bvi   BVI
    Unsigned 16-bit integer
    BCTP Version Indicator

bctp.tpei  TPEI
    Unsigned 16-bit integer
    Tunnelled Protocol Error Indicator
```

```

bctp.tpi  TPI
  Unsigned 16-bit integer
  Tunnelled Protocol Indicator

```

**BEA Tuxedo (tuxedo)**

```

tuxedo.magic  Magic
  Unsigned 32-bit integer
  TUXEDO magic

tuxedo.opcode  Opcode
  Unsigned 32-bit integer
  TUXEDO opcode

```

**BSSAP/BSAP (bssap)**

```

bssap.dlci.cc  Control Channel

    Global CN-Id IE

bssap.gprs_loc_upd_type  eMLPP Priority
    Unsigned 8-bit integer
    eMLPP Priority

bssap.ie_data  IE Data
    Byte array
    IE Data

bssap.imei  IMEI
    String
    IMEI

bssap.imei_ie  IMEI IE
    No value
    IMEI IE

bssap.imeisv  IMEISV
    String
    IMEISV

bssap.imesiv  IMEISV IE
    No value
    IMEISV IE

bssap.imsi  IMSI
    String
    IMSI

bssap.imsi_det_from_gprs_serv_type  IMSI detach from GPRS service type
    Unsigned 8-bit integer
    IMSI detach from GPRS service type

bssap.imsi_ie  IMSI IE
    No value
    IMSI IE

bssap.info_req  Information requested
    Unsigned 8-bit integer
    Information requested

bssap.info_req_ie  Information requested IE
    No value
    Information requested IE

bssap.length  Length
    Unsigned 8-bit integer
```

```
bssap.loc_area_id_ie  Location area identifier IE
    No value
    Location area identifier IE
bssap.loc_inf_age    Location information age IE
    No value
    Location information age IE
bssap.loc_upd_type_ie  GPRS location update type IE
    No value
    GPRS location update type IE
bssap.mm_information  MM information IE
    No value
    MM information IE
bssap.mobile_id_ie   Mobile identity IE
    No value
    Mobile identity IE
bssap.mobile_station_state  Mobile station state
    Unsigned 8-bit integer
    Mobile station state
bssap.mobile_station_state_ie  Mobile station state IE
    No value
    Mobile station state IE
bssap.mobile_stn_cls_mrk1_ie  Mobile station classmark 1 IE
    No value
    Mobile station classmark 1 IE
bssap.msi_det_from_gprs_serv_type_ie  IMSI detach from GPRS service type IE
    No value
    IMSI detach from GPRS service type IE
bssap.msi_det_from_non_gprs_serv_type_ie  IMSI detach from non-GPRS servic IE
    No value
    IMSI detach from non-GPRS servic IE
bssap.number_plan    Numbering plan identification
    Unsigned 8-bit integer
    Numbering plan identification
bssap.pdu_type       Message Type
    Unsigned 8-bit integer
bssap.plmn_id        PLMN-Id
    Byte array
    PLMN-Id
bssap.ptmsi          PTMSI
    Byte array
    PTMSI
bssap.ptmsi_ie       PTMSI IE
    No value
    PTMSI IE
bssap.reject_cause_ie  Reject cause IE
    No value
    Reject cause IE
```

```
bssap.sgsn_number  SGSN number
    String
    SGSN number

bssap.tmsi  TMSI
    Byte array
    TMSI

bssap.tmsi_ie  TMSI IE
    No value
    TMSI IE

bssap.tmsi_status  TMSI status
    Boolean
    TMSI status

bssap.tmsi_status_ie  TMSI status IE
    No value
    TMSI status IE

bssap.tunnel_prio  Tunnel Priority
    Unsigned 8-bit integer
    Tunnel Priority

bssap.type_of_number  Type of number
    Unsigned 8-bit integer
    Type of number

bssap.ulink_tnl_pld_cntrl_and_inf_ie  Uplink Tunnel Payload Control and Info IE
    No value
    Uplink Tunnel Payload Control and Info IE

bssap.vlr_number  VLR number
    String
    VLR number

bssap.vlr_number_ie  VLR number IE
    No value
    VLR number IE

bssap_plus.iei  IEI
    Unsigned 8-bit integer

#### **Basic Encoding Rules (ASN.1 X.690) (ber)**

```

ber.arbitrary  arbitrary
    Byte array
    ber.T_arbitrary
ber.bitstring.empty  Empty
    Unsigned 8-bit integer
    This is an empty bitstring
ber.bitstring.padding  Padding
    Unsigned 8-bit integer
    Number of unused bits in the last octet of the bitstring
ber.constructed.OCTETSTRING  OCTETSTRING
    Byte array
    This is a component of an constructed OCTETSTRING
ber.data_value_descriptor  data-value-descriptor
    String
    ber.ObjectDescriptor
ber.direct_reference  direct-reference
    ber.OBJECT_IDENTIFIER
ber.encoding  encoding
    Unsigned 32-bit integer
    ber.T_encoding
ber.id.class  Class
    Unsigned 8-bit integer
    Class of BER TLV Identifier

```

```
ber.id.pc P/C
  Boolean
  Primitive or Constructed BER encoding
ber.id.tag Tag
  Unsigned 8-bit integer
  Tag value for non-Universal classes
ber.id.uni_tag Tag
  Unsigned 8-bit integer
  Universal tag type
ber.indirect_reference indirect-reference
  Signed 32-bit integer
  ber.INTEGER
ber.length Length
  Unsigned 32-bit integer
  Length of contents
ber.octet_aligned octet-aligned
  Byte array
  ber.T_octet_aligned
ber.single_ASN1_type single-ASN1-type
  No value
  ber.T_single_ASN1_type
ber.unknown.BITSTRING BITSTRING
  Byte array
  This is an unknown BITSTRING
ber.unknown.BMPString BMPString
  String
  This is an unknown BMPString
ber.unknown.BOOLEAN BOOLEAN
  Unsigned 8-bit integer
  This is an unknown BOOLEAN
ber.unknown.ENUMERATED ENUMERATED
  Unsigned 32-bit integer
  This is an unknown ENUMERATED
ber.unknown.GRAPHICSTRING GRAPHICSTRING
  String
  This is an unknown GRAPHICSTRING
ber.unknown.GeneralString GeneralString
  String
  This is an unknown GeneralString

  String
  This is an unknown GeneralizedTime
ber.unknown.IA5String IA5String
  String
  This is an unknown IA5String
ber.unknown.INTEGER INTEGER
  Unsigned 32-bit integer
  This is an unknown INTEGER
```

```
ber.unknown.NumericString  NumericString
    String
    This is an unknown NumericString
ber.unknown.OCTETSTRING  OCTETSTRING
    Byte array
    This is an unknown OCTETSTRING
ber.unknown.OID  OID
    This is an unknown Object Identifier
ber.unknown.PrintableString  PrintableString
    String
    This is an unknown PrintableString
ber.unknown.TeletexString  TeletexString
    String
    This is an unknown TeletexString
ber.unknown.UTCTime  UTCTime
    String
    This is an unknown UTCTime
ber.unknown.UTF8String  UTF8String
    String
    This is an unknown UTF8String
ber.unknown.UniversalString  UniversalString
    String
    This is an unknown UniversalString
ber.unknown.VisibleString  VisibleString
    String
    This is an unknown VisibleString
```

**Bearer Independent Call Control (bicc)**

```
bicc.cic  Call identification Code (CIC)
    Unsigned 32-bit integer
```

**Bidirectional Forwarding Detection Control Message (bfd)**

```
bfd.auth.key  Authentication Key ID
    Unsigned 8-bit integer
    The Authentication Key ID, identifies which password is in use for this pack
bfd.auth.len  Authentication Length
    Unsigned 8-bit integer
    The length, in bytes, of the authentication section
bfd.auth.password  Password
    String
    The simple password in use on this session
bfd.auth.seq_num  Sequence Number
    Unsigned 32-bit integer
    The Sequence Number is periodically incremented to prevent replay attacks
bfd.auth.type  Authentication Type
    Unsigned 8-bit integer
    The type of authentication in use on this session
```

`bfd.desired_min_tx_interval` Desired Min TX Interval  
Unsigned 32-bit integer  
The minimum interval to use when transmitting BFD Control packets

`bfd.detect_time_multiplier` Detect Time Multiplier  
Unsigned 8-bit integer  
The transmit interval multiplied by this value is the failure detection time

`bfd.diag` Diagnostic Code  
Unsigned 8-bit integer  
This field give the reason for a BFD session failure

`bfd.flags` Message Flags  
Unsigned 8-bit integer

`bfd.flags.a` Authentication Present  
Boolean  
The Authentication Section is present

`bfd.flags.c` Control Plane Independent  
Boolean  
If set, the BFD implementation is implemented in the forwarding plane

`bfd.flags.d` Demand  
Boolean

`bfd.flags.f` Final  
Boolean

`bfd.flags.h` I hear you  
Boolean

`bfd.flags.m` Multipoint  
Boolean  
Reserved for future point-to-multipoint extensions

`bfd.flags.p` Poll  
Boolean

`bfd.message_length` Message Length  
Unsigned 8-bit integer  
Length of the BFD Control packet, in bytes

`bfd.my_discriminator` My Discriminator  
Unsigned 32-bit integer

`bfd.required_min_echo_interval` Required Min Echo Interval  
Unsigned 32-bit integer  
The minimum interval between received BFD Echo packets that this system can

`bfd.required_min_rx_interval` Required Min RX Interval  
Unsigned 32-bit integer  
The minimum interval between received BFD Control packets that this system c

`bfd.sta` Session State  
Unsigned 8-bit integer  
The BFD state as seen by the transmitting system

`bfd.version` Protocol Version  
Unsigned 8-bit integer  
The version number of the BFD protocol

`bfd.your_discriminator` Your Discriminator  
Unsigned 32-bit integer

**BitTorrent (bittorrent)**

```
bittorrent.azureus_msg  Azureus Message
    No value
bittorrent.bdict  Dictionary
    No value
bittorrent.bdict.entry  Entry
    No value
bittorrent.bint  Integer
    Signed 32-bit integer
bittorrent.blist  List
    No value
bittorrent.bstr  String
    String
bittorrent.bstr.length  String Length
    Unsigned 32-bit integer
bittorrent.info_hash  SHA1 Hash of info dictionary
    Byte array
bittorrent.jpc.addr  Cache Address
    String
bittorrent.jpc.addr.length  Cache Address Length
    Unsigned 32-bit integer
bittorrent.jpc.port  Port
    Unsigned 32-bit integer
bittorrent.jpc.session  Session ID
    Unsigned 32-bit integer
bittorrent.length  Field Length
    Unsigned 32-bit integer
bittorrent.msg  Message
    No value
bittorrent.msg.aztype  Message Type
    String
bittorrent.msg.bitfield  Bitfield data
    Byte array
bittorrent.msg.length  Message Length
    Unsigned 32-bit integer
bittorrent.msg.prio  Message Priority
    Unsigned 8-bit integer
bittorrent.msg.type  Message Type
    Unsigned 8-bit integer
bittorrent.msg.typelen  Message Type Length
    Unsigned 32-bit integer
bittorrent.peer_id  Peer ID
    Byte array
bittorrent.piece.begin  Begin offset of piece
    Unsigned 32-bit integer
```

```
bittorrent.piece.data  Data in a piece
    Byte array
bittorrent.piece.index  Piece index
    Unsigned 32-bit integer
bittorrent.piece.length  Piece Length
    Unsigned 32-bit integer
bittorrent.protocol.name  Protocol Name
    String
bittorrent.protocol.name.length  Protocol Name Length
    Unsigned 8-bit integer
bittorrent.reserved  Reserved Extension Bytes
    Byte array
```

### **Bitswapped ITU-T Recommendation H.223 (h223\_bitswapped)**

#### **Blocks Extensible Exchange Protocol (beep)**

```
beep.ansno  Ansno
    Unsigned 32-bit integer
beep.channel  Channel
    Unsigned 32-bit integer
beep.end  End
    Boolean
beep.more.complete  Complete
    Boolean
beep.more.intermediate  Intermediate
    Boolean
beep.msgno  Msgno
    Unsigned 32-bit integer
beep.req  Request
    Boolean
beep.req.channel  Request Channel Number
    Unsigned 32-bit integer
beep.rsp  Response
    Boolean
beep.rsp.channel  Response Channel Number
    Unsigned 32-bit integer
beep.seq  Sequence
    Boolean
beep.seq.ackno  Ackno
    Unsigned 32-bit integer
beep.seq.channel  Sequence Channel Number
    Unsigned 32-bit integer
beep.seq.window  Window
    Unsigned 32-bit integer
```

```
beep.seqno  Seqno
            Unsigned 32-bit integer

beep.size   Size
            Unsigned 32-bit integer

beep.status.negative  Negative
                    Boolean

beep.status.positive  Positive
                    Boolean

beep.violation  Protocol Violation
                Boolean
```

**Blubster/Piolet MANOLITO Protocol (manolito)**

```
manolito.checksum  Checksum
                  Unsigned 32-bit integer
                  Checksum used for verifying integrity

manolito.dest      Destination IP Address
                  IPv4 address
                  Destination IPv4 address

manolito.options   Options
                  Unsigned 32-bit integer
                  Packet-dependent data

manolito.seqno     Sequence Number
                  Unsigned 32-bit integer
                  Incremental sequence number

manolito.src       Forwarded IP Address
                  IPv4 address
                  Host packet was forwarded from (or 0)
```

**Bluetooth HCI (hci\_h1)**

```
hci_h1.direction  Direction
                  Unsigned 8-bit integer
                  HCI Packet Direction Sent/Rcvd

hci_h1.type        HCI Packet Type
                  Unsigned 8-bit integer
                  HCI Packet Type
```

**Bluetooth HCI ACL Packet (bthci\_acl)**

```
btacl.bc_flag     BC Flag
                  Unsigned 16-bit integer
                  Broadcast Flag

btacl.chandle     Connection Handle
                  Unsigned 16-bit integer
                  Connection Handle

btacl.continuation_to  This is a continuation to the PDU in frame
                    Frame number
                    This is a continuation to the PDU in frame #
```

```

btacl.data Data
  No value
  Data

btacl.length Data Total Length
  Unsigned 16-bit integer
  Data Total Length

btacl.pb_flag PB Flag
  Unsigned 16-bit integer
  Packet Boundary Flag

btacl.reassembled_in This PDU is reassembled in frame
  Frame number
  This PDU is reassembled in frame #

```

### Bluetooth HCI Command (bthci\_cmd)

```

bthci_cmd.afh_ch_assessment_mode AFH Channel Assessment Mode
  Unsigned 8-bit integer
  AFH Channel Assessment Mode

bthci_cmd.afh_ch_classification Channel Classification
  No value
  Channel Classification

bthci_cmd.air_coding_format Air Coding Format
  Unsigned 16-bit integer
  Air Coding Format

bthci_cmd.allow_role_switch Allow Role Switch
  Unsigned 8-bit integer
  Allow Role Switch

bthci_cmd.auth_enable Authentication Enable
  Unsigned 8-bit integer
  Authentication Enable

bthci_cmd.auth_requirements Authentication Requirements
  Unsigned 8-bit integer
  Authentication Requirements

bthci_cmd.auto_accept_flag Auto Accept Flag
  Unsigned 8-bit integer
  Class of Device of Interest

bthci_cmd.bd_addr BD_ADDR:
  No value
  Bluetooth Device Address

bthci_cmd.beacon_max_int Beacon Max Interval
  Unsigned 16-bit integer
  Maximal acceptable number of Baseband slots between consecutive beacons.

bthci_cmd.beacon_min_int Beacon Min Interval
  Unsigned 16-bit integer
  Minimum acceptable number of Baseband slots between consecutive beacons.

bthci_cmd.class_of_device Class of Device
  Unsigned 24-bit integer
  Class of Device

```

bthci\_cmd.class\_of\_device\_mask Class of Device Mask  
Unsigned 24-bit integer  
Bit Mask used to determine which bits of the Class of Device parameter are o

bthci\_cmd.clock\_offset Clock Offset  
Unsigned 16-bit integer  
Bit 2-16 of the Clock Offset between CLKmaster-CLKslave

bthci\_cmd.clock\_offset\_valid Clock\_Offset\_Valid\_Flag  
Unsigned 16-bit integer  
Indicates if clock offset is valid

bthci\_cmd.connection\_handle Connection Handle  
Unsigned 16-bit integer  
Connection Handle

bthci\_cmd.delay\_variation Delay Variation  
Unsigned 32-bit integer  
Delay Variation, in microseconds

bthci\_cmd.delete\_all\_flag Delete All Flag  
Unsigned 8-bit integer  
Delete All Flag

bthci\_cmd.device\_name Device Name  
String  
Userfriendly descriptive name for the device

bthci\_cmd.eir\_data Data  
Byte array  
EIR Data

bthci\_cmd.eir\_data\_type Type  
Unsigned 8-bit integer  
Data Type

bthci\_cmd.eir\_struct\_length Length  
Unsigned 8-bit integer  
Structure Length

bthci\_cmd.encrypt\_mode Encryption Mode  
Unsigned 8-bit integer  
Encryption Mode

bthci\_cmd.encryption\_enable Encryption Enable  
Unsigned 8-bit integer  
Encryption Enable

bthci\_cmd.err\_data\_reporting Erroneous Data Reporting  
Unsigned 8-bit integer  
Erroneous Data Reporting

bthci\_cmd.evt\_mask\_00 Inquiry Complete  
Unsigned 8-bit integer  
Inquiry Complete Bit

bthci\_cmd.evt\_mask\_01 Inquiry Result  
Unsigned 8-bit integer  
Inquiry Result Bit

bthci\_cmd.evt\_mask\_02 Connect Complete  
Unsigned 8-bit integer  
Connection Complete Bit

```
bthci_cmd.evt_mask_03  Connect Request
    Unsigned 8-bit integer
    Connect Request Bit

bthci_cmd.evt_mask_04  Disconnect Complete
    Unsigned 8-bit integer
    Disconnect Complete Bit

bthci_cmd.evt_mask_05  Auth Complete
    Unsigned 8-bit integer
    Auth Complete Bit

bthci_cmd.evt_mask_06  Remote Name Req Complete
    Unsigned 8-bit integer
    Remote Name Req Complete Bit

bthci_cmd.evt_mask_07  Encrypt Change
    Unsigned 8-bit integer
    Encrypt Change Bit

bthci_cmd.evt_mask_10  Change Connection Link Key Complete
    Unsigned 8-bit integer
    Change Connection Link Key Complete Bit

bthci_cmd.evt_mask_11  Master Link Key Complete
    Unsigned 8-bit integer
    Master Link Key Complete Bit

bthci_cmd.evt_mask_12  Read Remote Supported Features
    Unsigned 8-bit integer
    Read Remote Supported Features Bit

bthci_cmd.evt_mask_13  Read Remote Ver Info Complete
    Unsigned 8-bit integer
    Read Remote Ver Info Complete Bit

bthci_cmd.evt_mask_14  QoS Setup Complete
    Unsigned 8-bit integer
    QoS Setup Complete Bit

bthci_cmd.evt_mask_17  Hardware Error
    Unsigned 8-bit integer
    Hardware Error Bit

bthci_cmd.evt_mask_20  Flush Occurred
    Unsigned 8-bit integer
    Flush Occurred Bit

bthci_cmd.evt_mask_21  Role Change
    Unsigned 8-bit integer
    Role Change Bit

bthci_cmd.evt_mask_23  Mode Change
    Unsigned 8-bit integer
    Mode Change Bit

bthci_cmd.evt_mask_24  Return Link Keys
    Unsigned 8-bit integer
    Return Link Keys Bit

bthci_cmd.evt_mask_25  PIN Code Request
    Unsigned 8-bit integer
    PIN Code Request Bit
```

```
bthci_cmd.evt_mask_26  Link Key Request
    Unsigned 8-bit integer
    Link Key Request Bit

bthci_cmd.evt_mask_27  Link Key Notification
    Unsigned 8-bit integer
    Link Key Notification Bit

bthci_cmd.evt_mask_30  Loopback Command
    Unsigned 8-bit integer
    Loopback Command Bit

bthci_cmd.evt_mask_31  Data Buffer Overflow
    Unsigned 8-bit integer
    Data Buffer Overflow Bit

bthci_cmd.evt_mask_32  Max Slots Change
    Unsigned 8-bit integer
    Max Slots Change Bit

bthci_cmd.evt_mask_33  Read Clock Offset Complete
    Unsigned 8-bit integer
    Read Clock Offset Complete Bit

bthci_cmd.evt_mask_34  Connection Packet Type Changed
    Unsigned 8-bit integer
    Connection Packet Type Changed Bit

bthci_cmd.evt_mask_35  QoS Violation
    Unsigned 8-bit integer
    QoS Violation Bit

bthci_cmd.evt_mask_36  Page Scan Mode Change
    Unsigned 8-bit integer
    Page Scan Mode Change Bit

bthci_cmd.evt_mask_37  Page Scan Repetition Mode Change
    Unsigned 8-bit integer
    Page Scan Repetition Mode Change Bit

bthci_cmd.evt_mask_40  Flow Specification Complete
    Unsigned 8-bit integer
    Flow Specification Complete Bit

bthci_cmd.evt_mask_41  Inquiry Result With RSSI
    Unsigned 8-bit integer
    Inquiry Result With RSSI Bit

bthci_cmd.evt_mask_42  Read Remote Ext. Features Complete
    Unsigned 8-bit integer
    Read Remote Ext. Features Complete Bit

bthci_cmd.evt_mask_53  Synchronous Connection Complete
    Unsigned 8-bit integer
    Synchronous Connection Complete Bit

bthci_cmd.evt_mask_54  Synchronous Connection Changed
    Unsigned 8-bit integer
    Synchronous Connection Changed Bit

bthci_cmd.evt_mask_55  Sniff Substrate
    Unsigned 8-bit integer
    Sniff Substrate Bit
```

```
bthci_cmd.evt_mask_56  Extended Inquiry Result
    Unsigned 8-bit integer
    Extended Inquiry Result Bit

bthci_cmd.evt_mask_57  Encryption Key Refresh Complete
    Unsigned 8-bit integer
    Encryption Key Refresh Complete Bit

bthci_cmd.evt_mask_60  IO Capability Request
    Unsigned 8-bit integer
    IO Capability Request Bit

bthci_cmd.evt_mask_61  IO Capability Response
    Unsigned 8-bit integer
    IO Capability Response Bit

bthci_cmd.evt_mask_62  User Confirmation Request
    Unsigned 8-bit integer
    User Confirmation Request Bit

bthci_cmd.evt_mask_63  User Passkey Request
    Unsigned 8-bit integer
    User Passkey Request Bit

bthci_cmd.evt_mask_64  Remote OOB Data Request
    Unsigned 8-bit integer
    Remote OOB Data Request Bit

bthci_cmd.evt_mask_65  Simple Pairing Complete
    Unsigned 8-bit integer
    Simple Pairing Complete Bit

bthci_cmd.evt_mask_67  Link Supervision Timeout Changed
    Unsigned 8-bit integer
    Link Supervision Timeout Changed Bit

bthci_cmd.evt_mask_70  Enhanced Flush Complete
    Unsigned 8-bit integer
    Enhanced Flush Complete Bit

bthci_cmd.evt_mask_72  User Passkey Notification
    Unsigned 8-bit integer
    User Passkey Notification Bit

bthci_cmd.evt_mask_73  Keypress Notification
    Unsigned 8-bit integer
    Keypress Notification Bit

bthci_cmd.fec_required  FEC Required
    Unsigned 8-bit integer
    FEC Required

bthci_cmd.filter_condition_type  Filter Condition Type
    Unsigned 8-bit integer
    Filter Condition Type

bthci_cmd.filter_type  Filter Type
    Unsigned 8-bit integer
    Filter Type

bthci_cmd.flags  Flags
    Unsigned 8-bit integer
    Flags
```

```
bthci_cmd.flow_contr_enable  Flow Control Enable
    Unsigned 8-bit integer
    Flow Control Enable

bthci_cmd.flow_control  SCO Flow Control
    Unsigned 8-bit integer
    SCO Flow Control

bthci_cmd.flush_packet_type  Packet Type
    Unsigned 8-bit integer
    Packet Type

bthci_cmd.hash_c  Hash C
    Unsigned 16-bit integer
    Hash C

bthci_cmd.hold_mode_inquiry  Suspend Inquiry Scan
    Unsigned 8-bit integer
    Device can enter low power state

bthci_cmd.hold_mode_max_int  Hold Mode Max Interval
    Unsigned 16-bit integer
    Maximal acceptable number of Baseband slots to wait in Hold Mode.

bthci_cmd.hold_mode_min_int  Hold Mode Min Interval
    Unsigned 16-bit integer
    Minimum acceptable number of Baseband slots to wait in Hold Mode.

bthci_cmd.hold_mode_page  Suspend Page Scan
    Unsigned 8-bit integer
    Device can enter low power state

bthci_cmd.hold_mode_periodic  Suspend Periodic Inquiries
    Unsigned 8-bit integer
    Device can enter low power state

bthci_cmd.input_coding  Input Coding
    Unsigned 16-bit integer
    Authentication Enable

bthci_cmd.input_data_format  Input Data Format
    Unsigned 16-bit integer
    Input Data Format

bthci_cmd.input_sample_size  Input Sample Size
    Unsigned 16-bit integer
    Input Sample Size

bthci_cmd.inq_length  Inquiry Length
    Unsigned 8-bit integer
    Inquiry Length (*1.28s)

bthci_cmd.inq_scan_type  Scan Type
    Unsigned 8-bit integer
    Scan Type

bthci_cmd.interval  Interval
    Unsigned 16-bit integer
    Interval

bthci_cmd.io_capability  IO Capability
    Unsigned 8-bit integer
    IO Capability
```

```
bthci_cmd.key_flag  Key Flag
    Unsigned 8-bit integer
    Key Flag

bthci_cmd.lap      LAP
    Unsigned 24-bit integer
    LAP for the inquiry access code

bthci_cmd.latency  Latency
    Unsigned 32-bit integer
    Latency, in microseconds

bthci_cmd.lin_pcm_bit_pos  Linear PCM Bit Pos
    Unsigned 16-bit integer
    # bit pos. that MSB of sample is away from starting at MSB

bthci_cmd.link_key  Link Key
    Byte array
    Link Key for the associated BD_ADDR

bthci_cmd.link_policy_hold  Enable Hold Mode
    Unsigned 16-bit integer
    Enable Hold Mode

bthci_cmd.link_policy_park  Enable Park Mode
    Unsigned 16-bit integer
    Enable Park Mode

bthci_cmd.link_policy_sniff  Enable Sniff Mode
    Unsigned 16-bit integer
    Enable Sniff Mode

bthci_cmd.link_policy_switch  Enable Master Slave Switch
    Unsigned 16-bit integer
    Enable Master Slave Switch

bthci_cmd.loopback_mode  Loopback Mode
    Unsigned 8-bit integer
    Loopback Mode

bthci_cmd.max_data_length_acl  Host ACL Data Packet Length (bytes)
    Unsigned 16-bit integer
    Max Host ACL Data Packet length of data portion host is able to accept

bthci_cmd.max_data_length_sco  Host SCO Data Packet Length (bytes)
    Unsigned 8-bit integer
    Max Host SCO Data Packet length of data portion host is able to accept

bthci_cmd.max_data_num_acl  Host Total Num ACL Data Packets
    Unsigned 16-bit integer
    Total Number of HCI ACL Data Packets that can be stored in the data buffers

bthci_cmd.max_data_num_sco  Host Total Num SCO Data Packets
    Unsigned 16-bit integer
    Total Number of HCI SCO Data Packets that can be stored in the data buffers

bthci_cmd.max_latency  Max. Latency
    Unsigned 16-bit integer
    Max. Latency in baseband slots

bthci_cmd.max_latency_ms  Max. Latency (ms)
    Unsigned 16-bit integer
    Max. Latency (ms)
```

bthci\_cmd.max\_period\_length Max Period Length  
Unsigned 16-bit integer  
Maximum amount of time specified between consecutive inquiries.

bthci\_cmd.min\_local\_timeout Min. Local Timeout  
Unsigned 16-bit integer  
Min. Local Timeout in baseband slots

bthci\_cmd.min\_period\_length Min Period Length  
Unsigned 16-bit integer  
Minimum amount of time specified between consecutive inquiries.

bthci\_cmd.min\_remote\_timeout Min. Remote Timeout  
Unsigned 16-bit integer  
Min. Remote Timeout in baseband slots

bthci\_cmd.notification\_type Notification Type  
Unsigned 8-bit integer  
Notification Type

bthci\_cmd.num\_broad\_retran Num Broadcast Retran  
Unsigned 8-bit integer  
Number of Broadcast Retransmissions

bthci\_cmd.num\_compl\_packets Number of Completed Packets  
Unsigned 16-bit integer  
Number of Completed HCI Data Packets

bthci\_cmd.num\_curr\_iac Number of Current IAC  
Unsigned 8-bit integer  
Number of IACs which are currently in use

bthci\_cmd.num\_handles Number of Handles  
Unsigned 8-bit integer  
Number of Handles

bthci\_cmd.num\_responses Num Responses  
Unsigned 8-bit integer  
Number of Responses

bthci\_cmd.ocf ocf  
Unsigned 16-bit integer  
Opcode Command Field

bthci\_cmd.ogf ogf  
Unsigned 16-bit integer  
Opcode Group Field

bthci\_cmd.oob\_data\_present OOB Data Present  
Unsigned 8-bit integer  
OOB Data Present

bthci\_cmd.opcode Command Opcode  
Unsigned 16-bit integer  
HCI Command Opcode

bthci\_cmd.packet\_type\_2dh1 Packet Type 2-DH1  
Unsigned 16-bit integer  
Packet Type 2-DH1

bthci\_cmd.packet\_type\_2dh3 Packet Type 2-DH3  
Unsigned 16-bit integer  
Packet Type 2-DH3

```
bthci_cmd.packet_type_2dh5  Packet Type 2-DH5
    Unsigned 16-bit integer
    Packet Type 2-DH5

bthci_cmd.packet_type_3dh1  Packet Type 3-DH1
    Unsigned 16-bit integer
    Packet Type 3-DH1

bthci_cmd.packet_type_3dh3  Packet Type 3-DH3
    Unsigned 16-bit integer
    Packet Type 3-DH3

bthci_cmd.packet_type_3dh5  Packet Type 3-DH5
    Unsigned 16-bit integer
    Packet Type 3-DH5

bthci_cmd.packet_type_dh1   Packet Type DH1
    Unsigned 16-bit integer
    Packet Type DH1

bthci_cmd.packet_type_dh3   Packet Type DH3
    Unsigned 16-bit integer
    Packet Type DH3

bthci_cmd.packet_type_dh5   Packet Type DH5
    Unsigned 16-bit integer
    Packet Type DH5

bthci_cmd.packet_type_dm1   Packet Type DM1
    Unsigned 16-bit integer
    Packet Type DM1

bthci_cmd.packet_type_dm3   Packet Type DM3
    Unsigned 16-bit integer
    Packet Type DM3

bthci_cmd.packet_type_dm5   Packet Type DM5
    Unsigned 16-bit integer
    Packet Type DM5

bthci_cmd.packet_type_hv1   Packet Type HV1
    Unsigned 16-bit integer
    Packet Type HV1

bthci_cmd.packet_type_hv2   Packet Type HV2
    Unsigned 16-bit integer
    Packet Type HV2

bthci_cmd.packet_type_hv3   Packet Type HV3
    Unsigned 16-bit integer
    Packet Type HV3

bthci_cmd.page_number       Page Number
    Unsigned 8-bit integer
    Page Number

bthci_cmd.page_scan_mode    Page Scan Mode
    Unsigned 8-bit integer
    Page Scan Mode

bthci_cmd.page_scan_period_mode  Page Scan Period Mode
    Unsigned 8-bit integer
    Page Scan Period Mode
```

```
bthci_cmd.page_scan_repetition_mode  Page Scan Repetition Mode
    Unsigned 8-bit integer
    Page Scan Repetition Mode

bthci_cmd.param_length  Parameter Total Length
    Unsigned 8-bit integer
    Parameter Total Length

bthci_cmd.params  Command Parameters
    Byte array
    Command Parameters

bthci_cmd.passkey  Passkey
    Unsigned 32-bit integer
    Passkey

bthci_cmd.peak_bandwidth  Peak Bandwidth
    Unsigned 32-bit integer
    Peak Bandwidth, in bytes per second

bthci_cmd.pin_code  PIN Code
    String
    PIN Code

bthci_cmd.pin_code_length  PIN Code Length
    Unsigned 8-bit integer
    PIN Code Length

bthci_cmd.pin_type  PIN Type
    Unsigned 8-bit integer
    PIN Types

bthci_cmd.power_level  Power Level (dBm)
    Signed 8-bit integer
    Power Level (dBm)

bthci_cmd.power_level_type  Type
    Unsigned 8-bit integer
    Type

bthci_cmd.randomizer_r  Randomizer R
    Unsigned 16-bit integer
    Randomizer R

bthci_cmd.read_all_flag  Read All Flag
    Unsigned 8-bit integer
    Read All Flag

bthci_cmd.reason  Reason
    Unsigned 8-bit integer
    Reason

bthci_cmd.retransmission_effort  Retransmission Effort
    Unsigned 8-bit integer
    Retransmission Effort

bthci_cmd.role  Role
    Unsigned 8-bit integer
    Role

bthci_cmd.rx_bandwidth  Rx Bandwidth (bytes/s)
    Unsigned 32-bit integer
    Rx Bandwidth
```

```

bthci_cmd.scan_enable  Scan Enable
    Unsigned 8-bit integer
    Scan Enable

bthci_cmd.sco_packet_type_2ev3  Packet Type 2-EV3
    Unsigned 16-bit integer
    Packet Type 2-EV3

bthci_cmd.sco_packet_type_2ev5  Packet Type 2-EV5
    Unsigned 16-bit integer
    Packet Type 2-EV5

bthci_cmd.sco_packet_type_3ev3  Packet Type 3-EV3
    Unsigned 16-bit integer
    Packet Type 3-EV3

bthci_cmd.sco_packet_type_3ev5  Packet Type 3-EV5
    Unsigned 16-bit integer
    Packet Type 3-EV5

bthci_cmd.sco_packet_type_ev3   Packet Type EV3
    Unsigned 16-bit integer
    Packet Type EV3

bthci_cmd.sco_packet_type_ev4   Packet Type EV4
    Unsigned 16-bit integer
    Packet Type EV4

bthci_cmd.sco_packet_type_ev5   Packet Type EV5
    Unsigned 16-bit integer
    Packet Type EV5

bthci_cmd.sco_packet_type_hv1   Packet Type HV1
    Unsigned 16-bit integer
    Packet Type HV1

bthci_cmd.sco_packet_type_hv2   Packet Type HV2
    Unsigned 16-bit integer
    Packet Type HV2

bthci_cmd.sco_packet_type_hv3   Packet Type HV3
    Unsigned 16-bit integer
    Packet Type HV3

bthci_cmd.service_class_uuid128  UUID
    Byte array
    128-bit Service Class UUID

bthci_cmd.service_class_uuid16   UUID
    Unsigned 16-bit integer
    16-bit Service Class UUID

bthci_cmd.service_class_uuid32   UUID
    Unsigned 32-bit integer
    32-bit Service Class UUID

bthci_cmd.service_type  Service Type
    Unsigned 8-bit integer
    Service Type

bthci_cmd.simple_pairing_debug_mode  Simple Pairing Debug Mode
    Unsigned 8-bit integer
    Simple Pairing Debug Mode

```

```
bthci_cmd.simple_pairing_mode  Simple Pairing Mode
    Unsigned 8-bit integer
    Simple Pairing Mode

bthci_cmd.sniff_attempt  Sniff Attempt
    Unsigned 16-bit integer
    Number of Baseband receive slots for sniff attempt.

bthci_cmd.sniff_max_int  Sniff Max Interval
    Unsigned 16-bit integer
    Maximal acceptable number of Baseband slots between each sniff period.

bthci_cmd.sniff_min_int  Sniff Min Interval
    Unsigned 16-bit integer
    Minimum acceptable number of Baseband slots between each sniff period.

bthci_cmd.status  Status
    Unsigned 8-bit integer
    Status

bthci_cmd.timeout  Timeout
    Unsigned 16-bit integer
    Number of Baseband slots for timeout.

bthci_cmd.token_bucket_size  Available Token Bucket Size
    Unsigned 32-bit integer
    Token Bucket Size in bytes

bthci_cmd.token_rate  Available Token Rate
    Unsigned 32-bit integer
    Token Rate, in bytes per second

bthci_cmd.tx_bandwidth  Tx Bandwidth (bytes/s)
    Unsigned 32-bit integer
    Tx Bandwidth

bthci_cmd.which_clock  Which Clock
    Unsigned 8-bit integer
    Which Clock

bthci_cmd.window  Interval
    Unsigned 16-bit integer
    Window

bthci_cmd_num_link_keys  Number of Link Keys
    Unsigned 8-bit integer
    Number of Link Keys
```

#### **Bluetooth HCI Event (bthci\_evt)**

```
bthci_evt.afh_ch_assessment_mode  AFH Channel Assessment Mode
    Unsigned 8-bit integer
    AFH Channel Assessment Mode

bthci_evt.afh_channel_map  AFH Channel Map
    AFH Channel Map

bthci_evt.afh_mode  AFH Mode
    Unsigned 8-bit integer
    AFH Mode
```

```
bthci_evt.air_mode  Air Mode
    Unsigned 8-bit integer
    Air Mode

bthci_evt.auth_enable  Authentication
    Unsigned 8-bit integer
    Authentication Enable

bthci_evt.auth_requirements  Authentication Requirements
    Unsigned 8-bit integer
    Authentication Requirements

bthci_evt.bd_addr  BD_ADDR:
    No value
    Bluetooth Device Address

bthci_evt.class_of_device  Class of Device
    Unsigned 24-bit integer
    Class of Device

bthci_evt.clock  Clock
    Unsigned 32-bit integer
    Clock

bthci_evt.clock_accuracy  Clock
    Unsigned 16-bit integer
    Clock

bthci_evt.clock_offset  Clock Offset
    Unsigned 16-bit integer
    Bit 2-16 of the Clock Offset between CLKmaster-CLKslave

bthci_evt.code  Event Code
    Unsigned 8-bit integer
    Event Code

bthci_evt.com_opcode  Command Opcode
    Unsigned 16-bit integer
    Command Opcode

bthci_evt.comp_id  Manufacturer Name
    Unsigned 16-bit integer
    Manufacturer Name of Bluetooth Hardware

bthci_evt.connection_handle  Connection Handle
    Unsigned 16-bit integer
    Connection Handle

bthci_evt.country_code  Country Code
    Unsigned 8-bit integer
    Country Code

bthci_evt.current_mode  Current Mode
    Unsigned 8-bit integer
    Current Mode

bthci_evt.delay_variation  Available Delay Variation
    Unsigned 32-bit integer
    Available Delay Variation, in microseconds

bthci_evt.device_name  Device Name
    String
    Userfriendly descriptive name for the device
```

```
bthci_evt.encryption_enable  Encryption Enable
    Unsigned 8-bit integer
    Encryption Enable

bthci_evt.encryption_mode    Encryption Mode
    Unsigned 8-bit integer
    Encryption Mode

bthci_evt.err_data_reporting  Erroneous Data Reporting
    Unsigned 8-bit integer
    Erroneous Data Reporting

bthci_evt.failed_contact_counter  Failed Contact Counter
    Unsigned 16-bit integer
    Failed Contact Counter

bthci_evt.fec_required        FEC Required
    Unsigned 8-bit integer
    FEC Required

bthci_evt.flags               Flags
    Unsigned 8-bit integer
    Flags

bthci_evt.flow_direction      Flow Direction
    Unsigned 8-bit integer
    Flow Direction

bthci_evt.hardware_code       Hardware Code
    Unsigned 8-bit integer
    Hardware Code (implementation specific)

bthci_evt.hash_c              Hash C
    Unsigned 16-bit integer
    Hash C

bthci_evt.hci_vers_nr         HCI Version
    Unsigned 8-bit integer
    Version of the Current HCI

bthci_evt.hold_mode_inquiry   Suspend Inquiry Scan
    Unsigned 8-bit integer
    Device can enter low power state

bthci_evt.hold_mode_page      Suspend Page Scan
    Unsigned 8-bit integer
    Device can enter low power state

bthci_evt.hold_mode_periodic  Suspend Periodic Inquiries
    Unsigned 8-bit integer
    Device can enter low power state

bthci_evt.input_coding        Input Coding
    Unsigned 16-bit integer
    Authentication Enable

bthci_evt.input_data_format    Input Data Format
    Unsigned 16-bit integer
    Input Data Format

bthci_evt.input_sample_size    Input Sample Size
    Unsigned 16-bit integer
    Input Sample Size
```

```
bthci_evt.inq_scan_type  Scan Type
    Unsigned 8-bit integer
    Scan Type

bthci_evt.interval      Interval
    Unsigned 16-bit integer
    Interval - Number of Baseband slots

bthci_evt.io_capability  IO Capability
    Unsigned 8-bit integer
    IO Capability

bthci_evt.key_flag      Key Flag
    Unsigned 8-bit integer
    Key Flag

bthci_evt.key_type      Key Type
    Unsigned 8-bit integer
    Key Type

bthci_evt.latency       Available Latency
    Unsigned 32-bit integer
    Available Latency, in microseconds

bthci_evt.link_key      Link Key
    Byte array
    Link Key for the associated BD_ADDR

bthci_evt.link_policy_hold  Enable Hold Mode
    Unsigned 16-bit integer
    Enable Hold Mode

bthci_evt.link_policy_park  Enable Park Mode
    Unsigned 16-bit integer
    Enable Park Mode

bthci_evt.link_policy_sniff  Enable Sniff Mode
    Unsigned 16-bit integer
    Enable Sniff Mode

bthci_evt.link_policy_switch  Enable Master Slave Switch
    Unsigned 16-bit integer
    Enable Master Slave Switch

bthci_evt.link_quality    Link Quality
    Unsigned 8-bit integer
    Link Quality (0x00 - 0xFF Higher Value = Better Link)

bthci_evt.link_supervision_timeout  Link Supervision Timeout
    Unsigned 16-bit integer
    Link Supervision Timeout

bthci_evt.link_type      Link Type
    Unsigned 8-bit integer
    Link Type

bthci_evt.link_type_2dh1  ACL Link Type 2-DH1
    Unsigned 16-bit integer
    ACL Link Type 2-DH1

bthci_evt.link_type_2dh3  ACL Link Type 2-DH3
    Unsigned 16-bit integer
    ACL Link Type 2-DH3
```

```
bthci_evt.link_type_2dh5  ACL Link Type 2-DH5
    Unsigned 16-bit integer
    ACL Link Type 2-DH5

bthci_evt.link_type_3dh1  ACL Link Type 3-DH1
    Unsigned 16-bit integer
    ACL Link Type 3-DH1

bthci_evt.link_type_3dh3  ACL Link Type 3-DH3
    Unsigned 16-bit integer
    ACL Link Type 3-DH3

bthci_evt.link_type_3dh5  ACL Link Type 3-DH5
    Unsigned 16-bit integer
    ACL Link Type 3-DH5

bthci_evt.link_type_dh1   ACL Link Type DH1
    Unsigned 16-bit integer
    ACL Link Type DH1

bthci_evt.link_type_dh3   ACL Link Type DH3
    Unsigned 16-bit integer
    ACL Link Type DH3

bthci_evt.link_type_dh5   ACL Link Type DH5
    Unsigned 16-bit integer
    ACL Link Type DH5

bthci_evt.link_type_dm1   ACL Link Type DM1
    Unsigned 16-bit integer
    ACL Link Type DM1

bthci_evt.link_type_dm3   ACL Link Type DM3
    Unsigned 16-bit integer
    ACL Link Type DM3

bthci_evt.link_type_dm5   ACL Link Type DM5
    Unsigned 16-bit integer
    ACL Link Type DM5

bthci_evt.link_type_hv1   SCO Link Type HV1
    Unsigned 16-bit integer
    SCO Link Type HV1

bthci_evt.link_type_hv2   SCO Link Type HV2
    Unsigned 16-bit integer
    SCO Link Type HV2

bthci_evt.link_type_hv3   SCO Link Type HV3
    Unsigned 16-bit integer
    SCO Link Type HV3

bthci_evt.lmp_feature     3-slot packets
    Unsigned 8-bit integer
    3-slot packets

bthci_evt.lmp_handle      LMP Handle
    Unsigned 16-bit integer
    LMP Handle

bthci_evt.lmp_sub_vers_nr LMP Subversion
    Unsigned 16-bit integer
    Subversion of the Current LMP
```

```
bthci_evt.lmp_vers_nr  LMP Version
    Unsigned 8-bit integer
    Version of the Current LMP

bthci_evt.local_supported_cmds  Local Supported Commands
    Byte array
    Local Supported Commands

bthci_evt.loopback_mode  Loopback Mode
    Unsigned 8-bit integer
    Loopback Mode

bthci_evt.max_data_length_acl  Host ACL Data Packet Length (bytes)
    Unsigned 16-bit integer
    Max Host ACL Data Packet length of data portion host is able to accept

bthci_evt.max_data_length_sco  Host SCO Data Packet Length (bytes)
    Unsigned 8-bit integer
    Max Host SCO Data Packet length of data portion host is able to accept

bthci_evt.max_data_num_acl  Host Total Num ACL Data Packets
    Unsigned 16-bit integer
    Total Number of HCI ACL Data Packets that can be stored in the data buffers

bthci_evt.max_data_num_sco  Host Total Num SCO Data Packets
    Unsigned 16-bit integer
    Total Number of HCI SCO Data Packets that can be stored in the data buffers

bthci_evt.max_num_keys  Max Num Keys
    Unsigned 16-bit integer
    Total Number of Link Keys that the Host Controller can store

bthci_evt.max_page_number  Max. Page Number
    Unsigned 8-bit integer
    Max. Page Number

bthci_evt.max_rx_latency  Max. Rx Latency
    Unsigned 16-bit integer
    Max. Rx Latency

bthci_evt.max_slots  Maximum Number of Slots
    Unsigned 8-bit integer
    Maximum Number of slots allowed for baseband packets

bthci_evt.max_tx_latency  Max. Tx Latency
    Unsigned 16-bit integer
    Max. Tx Latency

bthci_evt.min_local_timeout  Min. Local Timeout
    Unsigned 16-bit integer
    Min. Local Timeout

bthci_evt.min_remote_timeout  Min. Remote Timeout
    Unsigned 16-bit integer
    Min. Remote Timeout

bthci_evt.notification_type  Notification Type
    Unsigned 8-bit integer
    Notification Type

bthci_evt.num_broad_retran  Num Broadcast Retran
    Unsigned 8-bit integer
    Number of Broadcast Retransmissions
```

bthci\_evt.num\_command\_packets Number of Allowed Command Packets  
Unsigned 8-bit integer  
Number of Allowed Command Packets

bthci\_evt.num\_compl\_packets Number of Completed Packets  
Unsigned 16-bit integer  
The number of HCI Data Packets that have been completed

bthci\_evt.num\_curr\_iac Num Current IAC  
Unsigned 8-bit integer  
Num of IACs currently in use to simultaneously listen

bthci\_evt.num\_handles Number of Connection Handles  
Unsigned 8-bit integer  
Number of Connection Handles and Num\_HCI\_Data\_Packets parameter pairs

bthci\_evt.num\_keys Number of Link Keys  
Unsigned 8-bit integer  
Number of Link Keys contained

bthci\_evt.num\_keys\_deleted Number of Link Keys Deleted  
Unsigned 16-bit integer  
Number of Link Keys Deleted

bthci\_evt.num\_keys\_read Number of Link Keys Read  
Unsigned 16-bit integer  
Number of Link Keys Read

bthci\_evt.num\_keys\_written Number of Link Keys Written  
Unsigned 8-bit integer  
Number of Link Keys Written

bthci\_evt.num\_responses Number of responses  
Unsigned 8-bit integer  
Number of Responses from Inquiry

bthci\_evt.num\_supp\_iac Num Support IAC  
Unsigned 8-bit integer  
Num of supported IAC the device can simultaneously listen

bthci\_evt.numeric\_value Numeric Value  
Unsigned 32-bit integer  
Numeric Value

bthci\_evt.ocf ocf  
Unsigned 16-bit integer  
Opcode Command Field

bthci\_evt.ogf ogf  
Unsigned 16-bit integer  
Opcode Group Field

bthci\_evt.oob\_data\_present OOB Data Present  
Unsigned 8-bit integer  
OOB Data Present

bthci\_evt.page\_number Page Number  
Unsigned 8-bit integer  
Page Number

bthci\_evt.page\_scan\_mode Page Scan Mode  
Unsigned 8-bit integer  
Page Scan Mode

```
bthci_evt.page_scan_period_mode  Page Scan Period Mode
    Unsigned 8-bit integer
    Page Scan Period Mode

bthci_evt.page_scan_repetition_mode  Page Scan Repetition Mode
    Unsigned 8-bit integer
    Page Scan Repetition Mode

bthci_evt.param_length  Parameter Total Length
    Unsigned 8-bit integer
    Parameter Total Length

bthci_evt.params  Event Parameter
    No value
    Event Parameter

bthci_evt.passkey  Passkey
    Unsigned 32-bit integer
    Passkey

bthci_evt.peak_bandwidth  Available Peak Bandwidth
    Unsigned 32-bit integer
    Available Peak Bandwidth, in bytes per second

bthci_evt.pin_type  PIN Type
    Unsigned 8-bit integer
    PIN Types

bthci_evt.power_level_type  Type
    Unsigned 8-bit integer
    Type

bthci_evt.randomizer_r  Randomizer R
    Unsigned 16-bit integer
    Randomizer R

bthci_evt.reason  Reason
    Unsigned 8-bit integer
    Reason

bthci_evt.remote_name  Remote Name
    String
    Userfriendly descriptive name for the remote device

bthci_evt.ret_params  Return Parameter
    No value
    Return Parameter

bthci_evt.role  Role
    Unsigned 8-bit integer
    Role

bthci_evt.rssi  RSSI (dB)
    Signed 8-bit integer
    RSSI (dB)

bthci_evt.scan_enable  Scan
    Unsigned 8-bit integer
    Scan Enable

bthci_evt.sco_flow_cont_enable  SCO Flow Control
    Unsigned 8-bit integer
    SCO Flow Control Enable
```

```
bthci_evt.service_type  Service Type
    Unsigned 8-bit integer
    Service Type

bthci_evt.simple_pairing_mode  Simple Pairing Mode
    Unsigned 8-bit integer
    Simple Pairing Mode

bthci_evt.status  Status
    Unsigned 8-bit integer
    Status

bthci_evt.sync_link_type  Link Type
    Unsigned 8-bit integer
    Link Type

bthci_evt.sync_rtx_window  Retransmit Window
    Unsigned 8-bit integer
    Retransmit Window

bthci_evt.sync_rx_pkt_len  Rx Packet Length
    Unsigned 16-bit integer
    Rx Packet Length

bthci_evt.sync_tx_interval  Transmit Interval
    Unsigned 8-bit integer
    Transmit Interval

bthci_evt.sync_tx_pkt_len  Tx Packet Length
    Unsigned 16-bit integer
    Tx Packet Length

bthci_evt.timeout  Timeout
    Unsigned 16-bit integer
    Number of Baseband slots for timeout.

bthci_evt.token_bucket_size  Token Bucket Size
    Unsigned 32-bit integer
    Token Bucket Size (bytes)

bthci_evt.token_rate  Available Token Rate
    Unsigned 32-bit integer
    Available Token Rate, in bytes per second

bthci_evt.transmit_power_level  Transmit Power Level (dBm)
    Signed 8-bit integer
    Transmit Power Level (dBm)

bthci_evt.window  Interval
    Unsigned 16-bit integer
    Window

bthci_evt_curr_role  Current Role
    Unsigned 8-bit integer
    Current role for this connection handle
```

**Bluetooth HCI H4 (hci\_h4)**

```
hci_h4.direction  Direction
    Unsigned 8-bit integer
    HCI Packet Direction Sent/Rcvd
```

hci\_h4.type HCI Packet Type  
Unsigned 8-bit integer  
HCI Packet Type

**Bluetooth HCI SCO Packet (bthci\_sco)**

btsco.chandle Connection Handle  
Unsigned 16-bit integer  
Connection Handle

btsco.data Data  
No value  
Data

btsco.length Data Total Length  
Unsigned 8-bit integer  
Data Total Length

**Bluetooth L2CAP Packet (btl2cap)**

btl2cap.cid CID  
Unsigned 16-bit integer  
L2CAP Channel Identifier

btl2cap.cmd\_code Command Code  
Unsigned 8-bit integer  
L2CAP Command Code

btl2cap.cmd\_data Command Data  
No value  
L2CAP Command Data

btl2cap.cmd\_ident Command Identifier  
Unsigned 8-bit integer  
L2CAP Command Identifier

btl2cap.cmd\_length Command Length  
Unsigned 8-bit integer  
L2CAP Command Length

btl2cap.command Command  
No value  
L2CAP Command

btl2cap.conf\_param\_option Configuration Parameter Option  
No value  
Configuration Parameter Option

btl2cap.conf\_result Result  
Unsigned 16-bit integer  
Configuration Result

btl2cap.continuation Continuation Flag  
Boolean  
Continuation Flag

btl2cap.dcid Destination CID  
Unsigned 16-bit integer  
Destination Channel Identifier

```
bt12cap.info_bidirqos  Bi-Directional QOS
    Unsigned 8-bit integer
    Bi-Directional QOS support

bt12cap.info_flowcontrol  Flow Control Mode
    Unsigned 8-bit integer
    Flow Control mode support

bt12cap.info_mtu  Remote Entity MTU
    Unsigned 16-bit integer
    Remote entities acceptable connectionless MTU

bt12cap.info_result  Result
    Unsigned 16-bit integer
    Information about the success of the request

bt12cap.info_retransmission  Retransmission Mode
    Unsigned 8-bit integer
    Retransmission mode support

bt12cap.info_type  Information Type
    Unsigned 16-bit integer
    Type of implementation-specific information

bt12cap.length  Length
    Unsigned 16-bit integer
    L2CAP Payload Length

bt12cap.maxtransmit  MaxTransmit
    Unsigned 8-bit integer
    Maximum I-frame retransmissions

bt12cap.monitortimeout  Monitor Timeout (ms)
    Unsigned 16-bit integer
    S-frame transmission interval (milliseconds)

bt12cap.mps  MPS
    Unsigned 16-bit integer
    Maximum PDU Payload Size

bt12cap.option_delayvar  Delay Variation (microseconds)
    Unsigned 32-bit integer
    Difference between maximum and minimum delay (microseconds)

bt12cap.option_flags  Flags
    Unsigned 8-bit integer
    Flags - must be set to 0 (Reserved for future use)

bt12cap.option_flush_to  Flush Timeout (ms)
    Unsigned 16-bit integer
    Flush Timeout in milliseconds

bt12cap.option_latency  Latency (microseconds)
    Unsigned 32-bit integer
    Maximal acceptable delay (microseconds)

bt12cap.option_length  Length
    Unsigned 8-bit integer
    Number of octets in option payload

bt12cap.option_mtu  MTU
    Unsigned 16-bit integer
    Maximum Transmission Unit
```

```
bt12cap.option_peakbandwidth  Peak Bandwidth (bytes/s)
    Unsigned 32-bit integer
    Limit how fast packets may be sent (bytes/s)

bt12cap.option_servicetype    Service Type
    Unsigned 8-bit integer
    Level of service required

bt12cap.option_tokenbysize    Token Bucket Size (bytes)
    Unsigned 32-bit integer
    Size of the token bucket (bytes)

bt12cap.option_tokenrate     Token Rate (bytes/s)
    Unsigned 32-bit integer
    Rate at which traffic credits are granted (bytes/s)

bt12cap.option_type          Type
    Unsigned 8-bit integer
    Type of option

bt12cap.payload              Payload
    Byte array
    L2CAP Payload

bt12cap.psm                  PSM
    Unsigned 16-bit integer
    Protocol/Service Multiplexor

bt12cap.rej_reason           Reason
    Unsigned 16-bit integer
    Reason

bt12cap.result               Result
    Unsigned 16-bit integer
    Result

bt12cap.retransmissionmode   Mode
    Unsigned 8-bit integer
    Retransmission/Flow Control mode

bt12cap.retransmittimeout    Retransmit timeout (ms)
    Unsigned 16-bit integer
    Retransmission timeout (milliseconds)

bt12cap.scid                 Source CID
    Unsigned 16-bit integer
    Source Channel Identifier

bt12cap.sig_mtu              Maximum Signalling MTU
    Unsigned 16-bit integer
    Maximum Signalling MTU

bt12cap.status               Status
    Unsigned 16-bit integer
    Status

bt12cap.txwindow             TxWindow
    Unsigned 8-bit integer
    Retransmission window size
```

**Bluetooth RFCOMM Packet (btrfcomm)**

```
btrfcomm.cr  C/R Flag
  Unsigned 8-bit integer
  Command/Response flag

btrfcomm.credits  Credits
  Unsigned 8-bit integer
  Flow control: number of UIH frames allowed to send

btrfcomm.dlci  DLCI
  Unsigned 8-bit integer
  RFCOMM DLCI

btrfcomm.ea  EA Flag
  Unsigned 8-bit integer
  EA flag (should be always 1)

btrfcomm.error_recovery_mode  Error Recovery Mode
  Unsigned 8-bit integer
  Error Recovery Mode

btrfcomm.fcs  Frame Check Sequence
  Unsigned 8-bit integer
  Checksum over frame

btrfcomm.frame_type  Frame type
  Unsigned 8-bit integer
  Command/Response flag

btrfcomm.len  Payload length
  Unsigned 16-bit integer
  Frame length

btrfcomm.max_frame_size  Max Frame Size
  Unsigned 16-bit integer
  Maximum Frame Size

btrfcomm.max_retrans  Max Retrans
  Unsigned 8-bit integer
  Maximum number of retransmissions

btrfcomm.mcc.cmd  C/R Flag
  Unsigned 8-bit integer
  Command/Response flag

btrfcomm.mcc.cr  C/R Flag
  Unsigned 8-bit integer
  Command/Response flag

btrfcomm.mcc.ea  EA Flag
  Unsigned 8-bit integer
  EA flag (should be always 1)

btrfcomm.mcc.len  MCC Length
  Unsigned 16-bit integer
  Length of MCC data

btrfcomm.msc.bl  Length of break in units of 200ms
  Unsigned 8-bit integer
  Length of break in units of 200ms
```

```
btrfcomm.msc.dv  Data Valid (DV)
    Unsigned 8-bit integer
    Data Valid

btrfcomm.msc.fc  Flow Control (FC)
    Unsigned 8-bit integer
    Flow Control

btrfcomm.msc.ic  Incoming Call Indicator (IC)
    Unsigned 8-bit integer
    Incoming Call Indicator

btrfcomm.msc.rtc Ready To Communicate (RTC)
    Unsigned 8-bit integer
    Ready To Communicate

btrfcomm.msc.rtr Ready To Receive (RTR)
    Unsigned 8-bit integer
    Ready To Receive

btrfcomm.pf     P/F flag
    Unsigned 8-bit integer
    Poll/Final bit

btrfcomm.pn.cl  Convergence layer
    Unsigned 8-bit integer
    Convergence layer used for that particular DLCI

btrfcomm.pn.i   Type of frame
    Unsigned 8-bit integer
    Type of information frames used for that particular DLCI

btrfcomm.priority Priority
    Unsigned 8-bit integer
    Priority
```

**Bluetooth SDP (btsdp)**

```
btsdp.error_code  ErrorCode
    Unsigned 16-bit integer
    Error Code

btsdp.len  ParameterLength
    Unsigned 16-bit integer
    ParameterLength

btsdp.pdu  PDU
    Unsigned 8-bit integer
    PDU type

btsdp.ssares.byte_count  AttributeListsByteCount
    Unsigned 16-bit integer
    count of bytes in attribute list response

btsdp.ssr.current_count  CurrentServiceRecordCount
    Unsigned 16-bit integer
    count of service records in this message

btsdp.ssr.total_count  TotalServiceRecordCount
    Unsigned 16-bit integer
    Total count of service records
```

btsdp.tid TransactionID  
Unsigned 16-bit integer  
Transaction ID

**Boardwalk (brdwlk)**

brdwlk.drop Packet Dropped  
Boolean

brdwlk.eof EOF  
Unsigned 8-bit integer  
EOF

brdwlk.error Error  
Unsigned 8-bit integer  
Error

brdwlk.error.crc CRC  
Boolean

brdwlk.error.ctrl Ctrl Char Inside Frame  
Boolean

brdwlk.error.ef Empty Frame  
Boolean

brdwlk.error.ff Fifo Full  
Boolean

brdwlk.error.jumbo Jumbo FC Frame  
Boolean

brdwlk.error.nd No Data  
Boolean

brdwlk.error.plp Packet Length Present  
Boolean

brdwlk.error.tr Truncated  
Boolean

brdwlk.pktcnt Packet Count  
Unsigned 16-bit integer

brdwlk.plen Original Packet Length  
Unsigned 32-bit integer

brdwlk.sof SOF  
Unsigned 8-bit integer  
SOF

brdwlk.vsan VSAN  
Unsigned 16-bit integer

**Boot Parameters (bootparams)**

bootparams.domain Client Domain  
String  
Client Domain

bootparams.fileid File ID  
String  
File ID

```
bootparams.filepath  File Path
    String
    File Path

bootparams.host      Client Host
    String
    Client Host

bootparams.hostaddr  Client Address
    IPv4 address
    Address

bootparams.procedure_v1  V1 Procedure
    Unsigned 32-bit integer
    V1 Procedure

bootparams.routeraddr  Router Address
    IPv4 address
    Router Address

bootparams.type      Address Type
    Unsigned 32-bit integer
    Address Type
```

**Bootstrap Protocol (bootp)**

```
bootp.client_id_uuid  Client Identifier (UUID)
    Client Machine Identifier (UUID)

bootp.client_network_id_major  Client Network ID Major Version
    Unsigned 8-bit integer
    Client Machine Identifier, Major Version

bootp.client_network_id_minor  Client Network ID Minor Version
    Unsigned 8-bit integer
    Client Machine Identifier, Major Version

bootp.cookie          Magic cookie
    IPv4 address

bootp.dhcp            Frame is DHCP
    Boolean

bootp.file            Boot file name
    String

bootp.flags           Bootp flags
    Unsigned 16-bit integer

bootp.flags.bc        Broadcast flag
    Boolean

bootp.flags.reserved  Reserved flags
    Unsigned 16-bit integer

bootp.fqdn.e          Encoding
    Boolean
    If true, name is binary encoded

bootp.fqdn.mbz        Reserved flags
    Unsigned 8-bit integer
```

```
bootp.fqdn.n  Server DDNS
              Boolean
              If true, server should not do any DDNS updates
bootp.fqdn.name  Client name
                Byte array
                Name to register via DDNS
bootp.fqdn.o  Server overrides
              Boolean
              If true, server insists on doing DDNS update
bootp.fqdn.rcode1  A-RR result
                  Unsigned 8-bit integer
                  Result code of A-RR update
bootp.fqdn.rcode2  PTR-RR result
                  Unsigned 8-bit integer
                  Result code of PTR-RR update
bootp.fqdn.s  Server
              Boolean
              If true, server should do DDNS update
bootp.hops  Hops
            Unsigned 8-bit integer
bootp.hw.addr  Client hardware address
              Byte array
bootp.hw.len  Hardware address length
             Unsigned 8-bit integer
bootp.hw.mac_addr  Client MAC address
                  6-byte Hardware (MAC) Address
bootp.hw.type  Hardware type
              Unsigned 8-bit integer
bootp.id  Transaction ID
         Unsigned 32-bit integer
bootp.ip.client  Client IP address
                IPv4 address
bootp.ip.relay  Relay agent IP address
               IPv4 address
bootp.ip.server  Next server IP address
                 IPv4 address
bootp.ip.your  Your (client) IP address
              IPv4 address
bootp.option.length  Length
                    Unsigned 8-bit integer
                    Bootp/Dhcp option length
bootp.option.type  Option
                  Unsigned 8-bit integer
                  Bootp/Dhcp option type
```

```
bootp.option.value  Value
    Byte array
    Bootp/Dhcp option value
bootp.secs  Seconds elapsed
    Unsigned 16-bit integer
bootp.server  Server host name
    String
bootp.type  Message type
    Unsigned 8-bit integer
bootp.vendor  Bootp Vendor Options
    Byte array
bootp.vendor.alu.tftp1  Spatial Redundancy TFTP1
    IPv4 address
bootp.vendor.alu.tftp2  Spatial Redundancy TFTP2
    IPv4 address
bootp.vendor.alu.vid  Voice VLAN ID
    Unsigned 16-bit integer
    Alcatel-Lucent VLAN ID to define Voice VLAN
bootp.vendor.docsis.cmcap_len  CM DC Length
    Unsigned 8-bit integer
    DOCSIS Cable Modem Device Capabilities Length
bootp.vendor.pktc.mtacap_len  MTA DC Length
    Unsigned 8-bit integer
    PacketCable MTA Device Capabilities Length
```

### **Border Gateway Protocol (bgp)**

```
bgp.aggregator_as  Aggregator AS
    Unsigned 16-bit integer
bgp.aggregator_origin  Aggregator origin
    IPv4 address
bgp.as_path  AS Path
    Unsigned 16-bit integer
bgp.cluster_identifier  Cluster identifier
    IPv4 address
bgp.cluster_list  Cluster List
    Byte array
bgp.community_as  Community AS
    Unsigned 16-bit integer
bgp.community_value  Community value
    Unsigned 16-bit integer
bgp.local_pref  Local preference
    Unsigned 32-bit integer
bgp.mp_nlri_tnl_id  MP Reach NLRI Tunnel Identifier
    Unsigned 16-bit integer
bgp.mp_reach_nlri_ipv4_prefix  MP Reach NLRI IPv4 prefix
    IPv4 address
```

```
bgp.mp_unreach_nlri_ipv4_prefix  MP Unreach NLRI IPv4 prefix
    IPv4 address
bgp.multi_exit_disc  Multiple exit discriminator
    Unsigned 32-bit integer
bgp.next_hop  Next hop
    IPv4 address
bgp.nlri_prefix  NLRI prefix
    IPv4 address
bgp.origin  Origin
    Unsigned 8-bit integer
bgp.originator_id  Originator identifier
    IPv4 address

    Boolean
    Unused Flags
bgp.ssa_l2tpv3_cookie  Cookie
    Byte array
    Cookie
bgp.ssa_l2tpv3_cookie_len  Cookie Length
    Unsigned 8-bit integer
    Cookie Length
bgp.ssa_l2tpv3_pref  Preference
    Unsigned 16-bit integer
    Preference
bgp.ssa_l2tpv3_s  Sequencing bit
    Boolean
    Sequencing S-bit
bgp.ssa_l2tpv3_session_id  Session ID
    Unsigned 32-bit integer
    Session ID
bgp.ssa_len  Length
    Unsigned 16-bit integer
    SSA Length
bgp.ssa_t  Transitive bit
    Boolean
    SSA Transitive bit
bgp.ssa_type  SSA Type
    Unsigned 16-bit integer
    SSA Type
bgp.ssa_value  Value
    Byte array
    SSA Value
bgp.type  Type
    Unsigned 8-bit integer
    BGP message type
bgp.withdrawn_prefix  Withdrawn prefix
    IPv4 address
```

**Building Automation and Control Network APDU (bacapp)**

bacapp.LVT Length Value Type  
Unsigned 8-bit integer  
Length Value Type

bacapp.NAK NAK  
Boolean  
negativ ACK

bacapp.SA SA  
Boolean  
Segmented Response accepted

bacapp.SRV SRV  
Boolean  
Server

bacapp.abort\_reason Abort Reason  
Unsigned 8-bit integer  
Abort Reason

bacapp.application\_tag\_number Application Tag Number  
Unsigned 8-bit integer  
Application Tag Number

bacapp.confirmed\_service Service Choice  
Unsigned 8-bit integer  
Service Choice

bacapp.context\_tag\_number Context Tag Number  
Unsigned 8-bit integer  
Context Tag Number

bacapp.extended\_tag\_number Extended Tag Number  
Unsigned 8-bit integer  
Extended Tag Number

bacapp.instance\_number Instance Number  
Unsigned 32-bit integer  
Instance Number

bacapp.invoke\_id Invoke ID  
Unsigned 8-bit integer  
Invoke ID

bacapp.max\_adpu\_size Size of Maximum ADPU accepted  
Unsigned 8-bit integer  
Size of Maximum ADPU accepted

bacapp.more\_segments More Segments  
Boolean  
More Segments Follow

bacapp.named\_tag Named Tag  
Unsigned 8-bit integer  
Named Tag

bacapp.objectType Object Type  
Unsigned 32-bit integer  
Object Type

```
bacapp.pduflags  PDU Flags

```

#### **Cast Client Control Protocol (cast)**

```
cast.DSCPValue  DSCPValue
    Unsigned 32-bit integer
    DSCPValue.

cast.MPI  MPI
    Unsigned 32-bit integer
    MPI.

cast.ORCStatus  ORCStatus
    Unsigned 32-bit integer
    The status of the opened receive channel.

cast.RTPPayloadFormat  RTPPayloadFormat
    Unsigned 32-bit integer
    RTPPayloadFormat.

cast.activeConferenceOnRegistration  ActiveConferenceOnRegistration
    Unsigned 32-bit integer
    ActiveConferenceOnRegistration.

cast.activeStreamsOnRegistration  ActiveStreamsOnRegistration
    Unsigned 32-bit integer
    ActiveStreamsOnRegistration.
```

```
cast.annexNandWFutureUse AnnexNandWFutureUse
    Unsigned 32-bit integer
    AnnexNandWFutureUse.

cast.audio AudioCodec
    Unsigned 32-bit integer
    The audio codec that is in use.

cast.bandwidth Bandwidth
    Unsigned 32-bit integer
    Bandwidth.

cast.bitRate BitRate
    Unsigned 32-bit integer
    BitRate.

cast.callIdentifier Call Identifier
    Unsigned 32-bit integer
    Call identifier for this call.

cast.callInstance CallInstance
    Unsigned 32-bit integer
    CallInstance.

cast.callSecurityStatus CallSecurityStatus
    Unsigned 32-bit integer
    CallSecurityStatus.

cast.callState CallState
    Unsigned 32-bit integer
    CallState.

cast.callType Call Type
    Unsigned 32-bit integer
    What type of call, in/out/etc

cast.calledParty CalledParty
    String
    The number called.

cast.calledPartyName Called Party Name
    String
    The name of the party we are calling.

cast.callingPartyName Calling Party Name
    String
    The passed name of the calling party.

cast.cdpnVoiceMailbox CdpnVoiceMailbox
    String
    CdpnVoiceMailbox.

cast.cgpnVoiceMailbox CgpnVoiceMailbox
    String
    CgpnVoiceMailbox.

cast.clockConversionCode ClockConversionCode
    Unsigned 32-bit integer
    ClockConversionCode.

cast.clockDivisor ClockDivisor
    Unsigned 32-bit integer
    Clock Divisor.
```

```
cast.confServiceNum  ConfServiceNum
    Unsigned 32-bit integer
    ConfServiceNum.

cast.conferenceID    Conference ID
    Unsigned 32-bit integer
    The conference ID

cast.customPictureFormatCount  CustomPictureFormatCount
    Unsigned 32-bit integer
    CustomPictureFormatCount.

cast.dataCapCount    DataCapCount
    Unsigned 32-bit integer
    DataCapCount.

cast.data_length     Data Length
    Unsigned 32-bit integer
    Number of bytes in the data portion.

cast.directoryNumber  Directory Number
    String
    The number we are reporting statistics for.

cast.echoCancelType  Echo Cancel Type
    Unsigned 32-bit integer
    Is echo cancelling enabled or not

cast.firstGOB        FirstGOB
    Unsigned 32-bit integer
    FirstGOB.

cast.firstMB         FirstMB
    Unsigned 32-bit integer
    FirstMB.

cast.format          Format
    Unsigned 32-bit integer
    Format.

cast.g723BitRate     G723 BitRate
    Unsigned 32-bit integer
    The G723 bit rate for this stream/JUNK if not g723 stream

cast.h263_capability_bitfield  H263_capability_bitfield
    Unsigned 32-bit integer
    H263_capability_bitfield.

cast.ipAddress       IP Address
    IPv4 address
    An IP address

cast.isConferenceCreator  IsConferenceCreator
    Unsigned 32-bit integer
    IsConferenceCreator.

cast.lastRedirectingParty  LastRedirectingParty
    String
    LastRedirectingParty.

cast.lastRedirectingPartyName  LastRedirectingPartyName
    String
    LastRedirectingPartyName.
```

```
cast.lastRedirectingReason  LastRedirectingReason
    Unsigned 32-bit integer
    LastRedirectingReason.

cast.lastRedirectingVoiceMailbox  LastRedirectingVoiceMailbox
    String
    LastRedirectingVoiceMailbox.

cast.layout  Layout
    Unsigned 32-bit integer
    Layout

cast.layoutCount  LayoutCount
    Unsigned 32-bit integer
    LayoutCount.

cast.levelPreferenceCount  LevelPreferenceCount
    Unsigned 32-bit integer
    LevelPreferenceCount.

cast.lineInstance  Line Instance
    Unsigned 32-bit integer
    The display call plane associated with this call.

cast.longTermPictureIndex  LongTermPictureIndex
    Unsigned 32-bit integer
    LongTermPictureIndex.

cast.marker  Marker
    Unsigned 32-bit integer
    Marker value should ne zero.

cast.maxBW  MaxBW
    Unsigned 32-bit integer
    MaxBW.

cast.maxBitRate  MaxBitRate
    Unsigned 32-bit integer
    MaxBitRate.

cast.maxConferences  MaxConferences
    Unsigned 32-bit integer
    MaxConferences.

cast.maxStreams  MaxStreams
    Unsigned 32-bit integer
    32 bit unsigned integer indicating the maximum number of simultansous RTP du

cast.messageid  Message ID
    Unsigned 32-bit integer
    The function requested/done with this message.

cast.millisecondPacketSize  MS/Packet
    Unsigned 32-bit integer
    The number of milliseconds of conversation in each packet

cast.minBitRate  MinBitRate
    Unsigned 32-bit integer
    MinBitRate.

cast.miscCommandType  MiscCommandType
    Unsigned 32-bit integer
    MiscCommandType
```

cast.modelNumber ModelNumber  
Unsigned 32-bit integer  
ModelNumber.

cast.numberOfGOBs NumberOfGOBs  
Unsigned 32-bit integer  
NumberOfGOBs.

cast.numberOfMBS NumberOfMBS  
Unsigned 32-bit integer  
NumberOfMBS.

cast.originalCalledParty Original Called Party  
String  
The number of the original calling party.

cast.originalCalledPartyName Original Called Party Name  
String  
name of the original person who placed the call.

cast.originalCdpnRedirectReason OriginalCdpnRedirectReason  
Unsigned 32-bit integer  
OriginalCdpnRedirectReason.

cast.originalCdpnVoiceMailbox OriginalCdpnVoiceMailbox  
String  
OriginalCdpnVoiceMailbox.

cast.passThruPartyID PassThruPartyID  
Unsigned 32-bit integer  
The pass thru party id

cast.payloadCapability PayloadCapability  
Unsigned 32-bit integer  
The payload capability for this media capability structure.

cast.payloadType PayloadType  
Unsigned 32-bit integer  
PayloadType.

cast.payload\_rfc\_number Payload\_rfc\_number  
Unsigned 32-bit integer  
Payload\_rfc\_number.

cast.pictureFormatCount PictureFormatCount  
Unsigned 32-bit integer  
PictureFormatCount.

cast.pictureHeight PictureHeight  
Unsigned 32-bit integer  
PictureHeight.

cast.pictureNumber PictureNumber  
Unsigned 32-bit integer  
PictureNumber.

cast.pictureWidth PictureWidth  
Unsigned 32-bit integer  
PictureWidth.

cast.pixelAspectRatio PixelAspectRatio  
Unsigned 32-bit integer  
PixelAspectRatio.

```
cast.portNumber Port Number
    Unsigned 32-bit integer
    A port number

cast.precedenceDm PrecedenceDm
    Unsigned 32-bit integer
    Precedence Domain.

cast.precedenceLv PrecedenceLv
    Unsigned 32-bit integer
    Precedence Level.

cast.precedenceValue Precedence
    Unsigned 32-bit integer
    Precedence value

cast.privacy Privacy
    Unsigned 32-bit integer
    Privacy.

cast.protocolDependentData ProtocolDependentData
    Unsigned 32-bit integer
    ProtocolDependentData.

cast.recoveryReferencePictureCount RecoveryReferencePictureCount
    Unsigned 32-bit integer
    RecoveryReferencePictureCount.

cast.requestorIpAddress RequestorIpAddress
    IPv4 address
    RequestorIpAddress

cast.serviceNum ServiceNum
    Unsigned 32-bit integer
    ServiceNum.

cast.serviceNumber ServiceNumber
    Unsigned 32-bit integer
    ServiceNumber.

cast.serviceResourceCount ServiceResourceCount
    Unsigned 32-bit integer
    ServiceResourceCount.

cast.stationFriendlyName StationFriendlyName
    String
    StationFriendlyName.

cast.stationGUID stationGUID
    String
    stationGUID.

cast.stationIpAddress StationIpAddress
    IPv4 address
    StationIpAddress

cast.stillImageTransmission StillImageTransmission
    Unsigned 32-bit integer
    StillImageTransmission.

cast.temporalSpatialTradeOff TemporalSpatialTradeOff
    Unsigned 32-bit integer
    TemporalSpatialTradeOff.
```

```
cast.temporalSpatialTradeOffCapability TemporalSpatialTradeOffCapability
    Unsigned 32-bit integer
    TemporalSpatialTradeOffCapability.

cast.transmitOrReceive TransmitOrReceive
    Unsigned 32-bit integer
    TransmitOrReceive

cast.transmitPreference TransmitPreference
    Unsigned 32-bit integer
    TransmitPreference.

cast.version Version
    Unsigned 32-bit integer
    The version in the keepalive version messages.

cast.videoCapCount VideoCapCount
    Unsigned 32-bit integer
    VideoCapCount.
```

**Catapult DCT2000 packet (dct2000)**

```
dct2000.context Context
    String
    Context name

dct2000.context_port Context Port number
    Unsigned 8-bit integer
    Context port number

dct2000.direction Direction
    Unsigned 8-bit integer
    Frame direction (Sent or Received)

dct2000.dissected-length Dissected length
    Unsigned 16-bit integer
    Number of bytes dissected by subdissector(s)

dct2000.encapsulation Wireshark encapsulation
    Unsigned 8-bit integer
    Wireshark frame encapsulation used

dct2000.ipprim IPPrim Addresses
    String
    IPPrim Addresses

dct2000.ipprim.addr Address
    IPv4 address
    IPPrim IPv4 Address

dct2000.ipprim.addr6 Address
    IPv6 address
    IPPrim IPv6 Address

dct2000.ipprim.conn-id Conn Id
    Unsigned 16-bit integer
    IPPrim TCP Connection ID

dct2000.ipprim.dst Destination Address
    IPv4 address
    IPPrim IPv4 Destination Address
```

```
dct2000.ipprim.dstv6  Destination Address
    IPv6 address
    IPPrim IPv6 Destination Address
dct2000.ipprim.src   Source Address
    IPv4 address
    IPPrim IPv4 Source Address
dct2000.ipprim.srcv6 Source Address
    IPv6 address
    IPPrim IPv6 Source Address
dct2000.ipprim.tcp.dstport  TCP Destination Port
    Unsigned 16-bit integer
    IPPrim TCP Destination Port
dct2000.ipprim.tcp.port   TCP Port
    Unsigned 16-bit integer
    IPPrim TCP Port
dct2000.ipprim.tcp.srcport  TCP Source Port
    Unsigned 16-bit integer
    IPPrim TCP Source Port
dct2000.ipprim.udp.dstport  UDP Destination Port
    Unsigned 16-bit integer
    IPPrim UDP Destination Port
dct2000.ipprim.udp.port   UDP Port
    Unsigned 16-bit integer
    IPPrim UDP Port
dct2000.ipprim.udp.srcport  UDP Source Port
    Unsigned 16-bit integer
    IPPrim UDP Source Port
dct2000.outhdr  Out-header
    String
    DCT2000 protocol outhdr
dct2000.protocol  DCT2000 protocol
    String
    Original (DCT2000) protocol name
dct2000.sctpprim  SCTPPrim Addresses
    String
    SCTPPrim Addresses
dct2000.sctpprim.addr  Address
    IPv4 address
    SCTPPrim IPv4 Address
dct2000.sctpprim.addr6  Address
    IPv6 address
    SCTPPrim IPv6 Address
dct2000.sctpprim.dst  Destination Address
    IPv4 address
    SCTPPrim IPv4 Destination Address
dct2000.sctpprim.dstv6  Destination Address
    IPv6 address
    SCTPPrim IPv6 Destination Address
```

```

dct2000.sctprim.dstport  UDP Destination Port
                        Unsigned 16-bit integer
                        SCTPPrim Destination Port

dct2000.timestamp      Timestamp
                        Double-precision floating point
                        File timestamp

dct2000.tty            tty contents
                        No value
                        tty contents

dct2000.tty-line      tty line
                        String
                        tty line

dct2000.unparsed_data  Unparsed protocol data
                        Byte array
                        Unparsed DCT2000 protocol data

dct2000.variant        Protocol variant
                        String
                        DCT2000 protocol variant

```

    No value
    crmf.OptionalValidity

crmf.value  value
    No value
    crmf.T_value

crmf.valueHint  valueHint
    Byte array
    crmf.OCTET_STRING

crmf.version  version
    Signed 32-bit integer
    pkixexplicit.Version
```

#### **Check Point High Availability Protocol (cpha)**

```
cpha.cluster_number  Cluster Number
    Unsigned 16-bit integer
    Cluster Number

cpha.dst_id  Destination Machine ID
    Unsigned 16-bit integer
    Destination Machine ID

cpha.ethernet_addr  Ethernet Address
    6-byte Hardware (MAC) Address
    Ethernet Address

cpha.filler  Filler
    Unsigned 16-bit integer
```

```
cpha.ha_mode  HA mode
              Unsigned 16-bit integer
              HA Mode

cpha.ha_time_unit  HA Time unit
                  Unsigned 16-bit integer
                  HA Time unit (ms)

cpha.hash_len  Hash list length
               Signed 32-bit integer
               Hash list length

cpha.id_num  Number of IDs reported
            Unsigned 16-bit integer
            Number of IDs reported

cpha.if_trusted  Interface Trusted
                Boolean
                Interface Trusted

cpha.ifn  Interface Number
         Unsigned 32-bit integer

cpha.in_assume_up  Interfaces assumed up in the Inbound
                  Signed 8-bit integer

cpha.in_up  Interfaces up in the Inbound
           Signed 8-bit integer
           Interfaces up in the Inbound

cpha.ip  IP Address
        IPv4 address
        IP Address

cpha.machine_num  Machine Number
                 Signed 16-bit integer
                 Machine Number

cpha.magic_number  CPHAP Magic Number
                  Unsigned 16-bit integer
                  CPHAP Magic Number

cpha.opcode  OpCode
            Unsigned 16-bit integer
            OpCode

cpha.out_assume_up  Interfaces assumed up in the Outbound
                   Signed 8-bit integer

cpha.out_up  Interfaces up in the Outbound
            Signed 8-bit integer

cpha.policy_id  Policy ID
               Unsigned 16-bit integer
               Policy ID

cpha.random_id  Random ID
               Unsigned 16-bit integer
               Random ID

cpha.reported_ifs  Reported Interfaces
                  Unsigned 32-bit integer
                  Reported Interfaces
```

```
cpha.seed Seed
    Unsigned 32-bit integer
    Seed

cpha.slot_num Slot Number
    Signed 16-bit integer
    Slot Number

cpha.src_id Source Machine ID
    Unsigned 16-bit integer
    Source Machine ID

cpha.src_if Source Interface
    Unsigned 16-bit integer
    Source Interface

cpha.status Status
    Unsigned 32-bit integer

cpha.version Protocol Version
    Unsigned 16-bit integer
    CPHAP Version
```

**Checkpoint FW-1 (fw1)**

```
fw1.chain Chain Position
    String
    Chain Position

fw1.direction Direction
    String
    Direction

fw1.interface Interface
    String
    Interface

fw1.type Type
    Unsigned 16-bit integer

fw1.uuid UUID
    Unsigned 32-bit integer
    UUID
```

**China Mobile Point to Point Protocol (cmpp)**

```
cmpp.Command_Id Command Id
    Unsigned 32-bit integer
    Command Id of the CMPP messages

cmpp.Dest_terminal_Id Destination Address
    String
    MSISDN number which receive the SMS

cmpp.LinkID Link ID
    String
    Link ID

cmpp.Msg_Content Message Content
    String
    Message Content
```

```

cmpp.Msg_Fmt  Message Format
  Unsigned 8-bit integer
  Message Format

cmpp.Msg_Id  Msg_Id
  Unsigned 64-bit integer
  Message ID

cmpp.Msg_Id.ismg_code  ISMG Code
  Unsigned 32-bit integer
  ISMG Code, bit 38 ~ 17

cmpp.Msg_Id.sequence_id  Msg_Id sequence Id
  Unsigned 16-bit integer
  Msg_Id sequence Id, bit 16 ~ 1

cmpp.Msg_Id.timestamp  Timestamp
  String
  Timestamp MM/DD HH:MM:SS Bit 64 ~ 39

cmpp.Msg_Length  Message length
  Unsigned 8-bit integer
  SMS Message length, ASCII must be <= 160 bytes, other must be <= 140 bytes

cmpp.Report.SMSC_sequence  SMSC_sequence
  Unsigned 32-bit integer
  Sequence number

cmpp.Sequence_Id  Sequence Id
  Unsigned 32-bit integer
  Sequence Id of the CMPP messages

cmpp.Servicd_Id  Service ID
  String
  Service ID, a mix of characters, numbers and symbol

cmpp.TP_pId  TP pId
  Unsigned 8-bit integer
  GSM TP pId Field

cmpp.TP_udhi  TP udhi
  Unsigned 8-bit integer
  GSM TP udhi field

cmpp.Total_Length  Total Length
  Unsigned 32-bit integer
  Total length of the CMPP PDU.

cmpp.Version  Version
  String
  CMPP Version

cmpp.connect.AuthenticatorSource  Authenticator Source
  String
  Authenticator source, MD5(Source_addr + 9 zero + shared secret + timestamp)

cmpp.connect.Source_Addr  Source Addr
  String
  Source Address, the SP_Id

cmpp.connect.Timestamp  Timestamp
  String
  Timestamp MM/DD HH:MM:SS

```

```
cmpp.connect_resp.AuthenticatorISMG  SIMG Authenticate result
    String
    Authenticator result, MD5(Status + AuthenticatorSource + shared secret)
cmpp.connect_resp.Status  Connect Response Status
    Unsigned 32-bit integer
    Response Status, Value higher then 4 means other error
cmpp.deliver.Dest_Id  Destination ID
    String
    SP Service ID or server number
cmpp.deliver.Registered_Delivery  Deliver Report
    Boolean
    The message is a deliver report if this value = 1
cmpp.deliver.Report  Detail Deliver Report
    No value
    The detail report
cmpp.deliver.Report.Done_time  Done_time
    String
    Format YMMDDHHMM
cmpp.deliver.Report.Status  Deliver Status
    String
    Deliver Status
cmpp.deliver.Report.Submit_time  Submit_time
    String
    Format YMMDDHHMM
cmpp.deliver.Src_terminal_Id  Src_terminal_Id
    String
    Source MSISDN number, if it is deliver report, this will be the CMPP_SUBMIT
cmpp.deliver.Src_terminal_type  Fake source terminal type
    Boolean
    Type of the source terminal, can be 0 (real) or 1 (fake)
cmpp.deliver_resp.Result  Result
    Unsigned 32-bit integer
    Deliver Result
cmpp.submit.At_time  Send time
    String
    Message send time, format following SMPP 3.3
cmpp.submit.DestUstr_t1  Destination Address Count
    Unsigned 8-bit integer
    Number of destination address, must smaller then 100
cmpp.submit.Dest_terminal_type  Fake Destination Terminal
    Boolean
    destination terminal type, 0 is real, 1 is fake
cmpp.submit.FeeCode  Fee Code
    String
    Fee Code
cmpp.submit.FeeType  Fee Type
    String
    Fee Type
```

cmpp.submit.Fee\_UserType Charging Informations  
Unsigned 8-bit integer  
Charging Informations, if value is 3, this field will not be used

cmpp.submit.Fee\_terminal\_Id Fee Terminal ID  
String  
Fee Terminal ID, Valid only when Fee\_UserType is 3

cmpp.submit.Fee\_terminal\_type Fake Fee Terminal  
Boolean  
Fee terminal type, 0 is real, 1 is fake

cmpp.submit.Msg\_level Message Level  
Unsigned 8-bit integer  
Message Level

cmpp.submit.Msg\_src Message Source SP\_Id  
String  
Message source SP ID

cmpp.submit.Pk\_number Part Number  
Unsigned 8-bit integer  
Part number of the message with the same Msg\_Id, start from 1

cmpp.submit.Pk\_total Number of Part  
Unsigned 8-bit integer  
Total number of parts of the message with the same Msg\_Id, start from 1

cmpp.submit.Registered\_Delivery Registered Delivery  
Boolean  
Registered Delivery flag

cmpp.submit.Src\_Id Source ID  
String  
This value matches SMPP submit\_sm source\_addr field

cmpp.submit.Valld\_Time Valid time  
String  
Message Valid Time, format follow SMPP 3.3

cmpp.submit\_resp.Result Result  
Unsigned 32-bit integer  
Submit Result

**Cisco Auto-RP (auto\_rp)**

auto\_rp.group\_prefix Prefix  
IPv4 address  
Group prefix

auto\_rp.holdtime Holdtime  
Unsigned 16-bit integer  
The amount of time in seconds this announcement is valid

auto\_rp.mask\_len Mask length  
Unsigned 8-bit integer  
Length of group prefix

auto\_rp.pim\_ver Version  
Unsigned 8-bit integer  
RP's highest PIM version

```
auto_rp.prefix_sign  Sign
    Unsigned 8-bit integer
    Group prefix sign

auto_rp.rp_addr  RP address
    IPv4 address
    The unicast IP address of the RP

auto_rp.rp_count  RP count
    Unsigned 8-bit integer
    The number of RP addresses contained in this message

auto_rp.type  Packet type
    Unsigned 8-bit integer
    Auto-RP packet type

auto_rp.version  Protocol version
    Unsigned 8-bit integer
    Auto-RP protocol version
```

### **Cisco Discovery Protocol (cdp)**

```
cdp.checksum  Checksum
    Unsigned 16-bit integer

cdp.checksum_bad  Bad
    Boolean
    True: checksum doesn't match packet content; False: matches content or not c

cdp.checksum_good  Good
    Boolean
    True: checksum matches packet content; False: doesn't match content or not c

cdp.tlv.len  Length
    Unsigned 16-bit integer

cdp.tlv.type  Type
    Unsigned 16-bit integer

cdp.ttl  TTL
    Unsigned 16-bit integer

cdp.version  Version
    Unsigned 8-bit integer
```

### **Cisco Group Management Protocol (cgmp)**

```
cgmp.count  Count
    Unsigned 8-bit integer

cgmp.gda  Group Destination Address
    6-byte Hardware (MAC) Address
    Group Destination Address

cgmp.type  Type
    Unsigned 8-bit integer

cgmp.usa  Unicast Source Address
    6-byte Hardware (MAC) Address
    Unicast Source Address

cgmp.version  Version
    Unsigned 8-bit integer
```

**Cisco HDLC (chdlc)**

chdlc.address Address  
Unsigned 8-bit integer

chdlc.protocol Protocol  
Unsigned 16-bit integer

**Cisco Hot Standby Router Protocol (hsrp)**

hsrp.adv.activegrp Adv active groups  
Unsigned 8-bit integer  
Advertisement active group count

hsrp.adv.passivegrp Adv passive groups  
Unsigned 8-bit integer  
Advertisement passive group count

hsrp.adv.reserved1 Adv reserved1  
Unsigned 8-bit integer  
Advertisement tlv length

hsrp.adv.reserved2 Adv reserved2  
Unsigned 32-bit integer  
Advertisement tlv length

hsrp.adv.state Adv state  
Unsigned 8-bit integer  
Advertisement tlv length

hsrp.adv.tlvtlength Adv length  
Unsigned 16-bit integer  
Advertisement tlv length

hsrp.adv.tlvtype Adv type  
Unsigned 16-bit integer  
Advertisement tlv type

hsrp.auth\_data Authentication Data  
String  
Contains a clear-text 8 character reused password

hsrp.group Group  
Unsigned 8-bit integer  
This field identifies the standby group

hsrp.hellotime Hellotime  
Unsigned 8-bit integer  
The approximate period between the Hello messages that the router sends

hsrp.holdtime Holdtime  
Unsigned 8-bit integer  
Time that the current Hello message should be considered valid

hsrp.md5\_ip\_address Sender's IP Address  
IPv4 address  
IP Address of the sender interface

hsrp.opcode Op Code  
Unsigned 8-bit integer  
The type of message contained in this packet

hsrp.priority Priority  
Unsigned 8-bit integer  
Used to elect the active and standby routers. Numerically higher priority wi

hsrp.reserved Reserved  
Unsigned 8-bit integer  
Reserved

hsrp.state State  
Unsigned 8-bit integer  
The current state of the router sending the message

hsrp.version Version  
Unsigned 8-bit integer  
The version of the HSRP messages

hsrp.virt\_ip Virtual IP Address  
IPv4 address  
The virtual IP address used by this group

hsrp2.\_md5\_algorithm MD5 Algorithm  
Unsigned 8-bit integer  
Hash Algorithm used by this group

hsrp2.\_md5\_flags MD5 Flags  
Unsigned 8-bit integer  
Undefined

hsrp2.active\_groups Active Groups  
Unsigned 16-bit integer  
Active group number which becomes the active router myself

hsrp2.auth\_data Authentication Data  
String  
Contains a clear-text 8 character reused password

hsrp2.group Group  
Unsigned 16-bit integer  
This field identifies the standby group

hsrp2.group\_state\_tlv Group State TLV  
Unsigned 8-bit integer  
Group State TLV

hsrp2.hellotime Hellotime  
Unsigned 32-bit integer  
The approximate period between the Hello messages that the router sends

hsrp2.holdtime Holdtime  
Unsigned 32-bit integer  
Time that the current Hello message should be considered valid

hsrp2.identifier Identifier  
6-byte Hardware (MAC) Address  
BIA value of a sender interafce

hsrp2.interface\_state\_tlv Interface State TLV  
Unsigned 8-bit integer  
Interface State TLV

hsrp2.ipversion IP Ver.  
Unsigned 8-bit integer  
The IP protocol version used in this hsrp message

hsrp2.md5\_auth\_data MD5 Authentication Data  
Unsigned 32-bit integer  
MD5 digest string is contained.

hsrp2.md5\_auth\_tlv MD5 Authentication TLV  
Unsigned 8-bit integer  
MD5 Authentication TLV

hsrp2.md5\_key\_id MD5 Key ID  
Unsigned 32-bit integer  
This field contains Key chain ID

hsrp2.opcode Op Code  
Unsigned 8-bit integer  
The type of message contained in this packet

hsrp2.passive\_groups Passive Groups  
Unsigned 16-bit integer  
Standby group number which doesn't become the active router myself

hsrp2.priority Priority  
Unsigned 32-bit integer  
Used to elect the active and standby routers. Numerically higher priority wins

hsrp2.state State  
Unsigned 8-bit integer  
The current state of the router sending the message

hsrp2.text\_auth\_tlv Text Authentication TLV  
Unsigned 8-bit integer  
Text Authentication TLV

hsrp2.version Version  
Unsigned 8-bit integer  
The version of the HSRP messages

hsrp2.virt\_ip Virtual IP Address  
IPv4 address  
The virtual IP address used by this group

hsrp2.virt\_ip\_v6 Virtual IPv6 Address  
IPv6 address  
The virtual IPv6 address used by this group

**Cisco ISL (isl)**

isl.addr Source or Destination Address  
6-byte Hardware (MAC) Address  
Source or Destination Hardware Address

isl.bpdu BPDU  
Boolean  
BPDU indicator

isl.crc CRC  
Unsigned 32-bit integer  
CRC field of encapsulated frame

isl.dst Destination  
Byte array  
Destination Address

```
isl.dst_route_desc  Destination route descriptor
                    Unsigned 16-bit integer
                    Route descriptor to be used for forwarding

isl.esize  Esize
           Unsigned 8-bit integer
           Frame size for frames less than 64 bytes

isl.explorer  Explorer
             Boolean
             Explorer

isl.fcs_not_incl  FCS Not Included
                 Boolean
                 FCS not included

isl.hsa  HSA
        Unsigned 24-bit integer
        High bits of source address

isl.index  Index
          Unsigned 16-bit integer
          Port index of packet source

isl.len  Length
        Unsigned 16-bit integer

isl.src  Source
        6-byte Hardware (MAC) Address
        Source Hardware Address

isl.src_route_desc  Source-route descriptor
                   Unsigned 16-bit integer
                   Route descriptor to be used for source learning

isl.src_vlan_id  Source VLAN ID
                Unsigned 16-bit integer
                Source Virtual LAN ID

isl.trailer  Trailer
            Byte array
            Ethernet Trailer or Checksum

isl.type  Type
         Unsigned 8-bit integer
         Type

isl.user  User
        Unsigned 8-bit integer
        User-defined bits

isl.user_eth  User
             Unsigned 8-bit integer
             Priority (for Ethernet)

isl.vlan_id  VLAN ID
            Unsigned 16-bit integer
            Virtual LAN ID
```

**Cisco Interior Gateway Routing Protocol (igrp)**

```
igrp.as Autonomous System
      Unsigned 16-bit integer
      Autonomous System number

igrp.update Update Release
      Unsigned 8-bit integer
      Update Release number
```

**Cisco NetFlow/IPFIX (cflow)**

```
cflow.aggmeth AggMethod
      Unsigned 8-bit integer
      CFlow V8 Aggregation Method

cflow.aggver AggVersion
      Unsigned 8-bit integer
      CFlow V8 Aggregation Version

cflow.bgpnexthop BGPNextHop
      IPv4 address
      BGP Router Nexthop

cflow.bgpnexthopv6 BGPNextHop
      IPv6 address
      BGP Router Nexthop

cflow.count Count
      Unsigned 16-bit integer
      Count of PDUs

cflow.data_datarecord_id DataRecord (Template Id)
      Unsigned 16-bit integer
      DataRecord with corresponding to a template Id

cflow.data_flowset_id Data FlowSet (Template Id)
      Unsigned 16-bit integer
      Data FlowSet with corresponding to a template Id

cflow.direction Direction
      Unsigned 8-bit integer
      Direction

cflow.dstaddr DstAddr
      IPv4 address
      Flow Destination Address

cflow.dstaddrv6 DstAddr
      IPv6 address
      Flow Destination Address

cflow.dstas DstAS
      Unsigned 16-bit integer
      Destination AS

cflow.dstmask DstMask
      Unsigned 8-bit integer
      Destination Prefix Mask

cflow.dstmaskv6 DstMask
      Unsigned 8-bit integer
      IPv6 Destination Prefix Mask
```

```
cflow.dstport  DstPort
    Unsigned 16-bit integer
    Flow Destination Port

cflow.dstprefix  DstPrefix
    IPv4 address
    Flow Destination Prefix

cflow.engine_id  EngineId
    Unsigned 8-bit integer
    Slot number of switching engine

cflow.engine_type  EngineType
    Unsigned 8-bit integer
    Flow switching engine type

cflow.exporttime  ExportTime
    Unsigned 32-bit integer
    Time when the flow has been exported

cflow.flags  Export Flags
    Unsigned 8-bit integer
    CFlow Flags

cflow.flow_active_timeout  Flow active timeout
    Unsigned 16-bit integer
    Flow active timeout

cflow.flow_class  FlowClass
    Unsigned 8-bit integer
    Flow Class

cflow.flow_exporter  FlowExporter
    Byte array
    Flow Exporter

cflow.flow_inactive_timeout  Flow inactive timeout
    Unsigned 16-bit integer
    Flow inactive timeout

cflow.flows  Flows
    Unsigned 32-bit integer
    Flows Aggregated in PDU

cflow.flowset_id  FlowSet Id
    Unsigned 16-bit integer
    FlowSet Id

cflow.flowset_length  FlowSet Length
    Unsigned 16-bit integer
    FlowSet length

cflow.flowsexp  FlowsExp
    Unsigned 32-bit integer
    Flows exported

cflow.forwarding_code  ForwdCode
    Unsigned 8-bit integer
    Forwarding Code

cflow.forwarding_status  ForwdStat
    Unsigned 8-bit integer
    Forwarding Status
```

```
cflow.icmp_ipv4_code  IPv4 ICMP Code
    Unsigned 8-bit integer
    IPv4 ICMP code

cflow.icmp_ipv4_type  IPv4 ICMP Type
    Unsigned 8-bit integer
    IPv4 ICMP type

cflow.icmp_ipv6_code  IPv6 ICMP Code
    Unsigned 8-bit integer
    IPv6 ICMP code

cflow.icmp_ipv6_type  IPv6 ICMP Type
    Unsigned 8-bit integer
    IPv6 ICMP type

cflow.icmp_type       ICMP Type
    Unsigned 8-bit integer
    ICMP type

cflow.if_descr        IfDescr
    String
    SNMP Interface Description

cflow.if_name         IfName
    String
    SNMP Interface Name

cflow.igmp_type       IGMP Type
    Unsigned 8-bit integer
    IGMP type

cflow.inputint        InputInt
    Unsigned 16-bit integer
    Flow Input Interface

cflow.ip_dscp         DSCP
    Unsigned 8-bit integer
    IP DSCP

cflow.ip_header_words IPHeaderLen
    Unsigned 8-bit integer
    IPHeaderLen

cflow.ip_tos          IP TOS
    Unsigned 8-bit integer
    IP type of service

cflow.ip_total_length IP Total Length
    Unsigned 8-bit integer
    IP total length

cflow.ip_ttl          IP TTL
    Unsigned 8-bit integer
    IP time to live

cflow.ip_version      IPVersion
    Byte array
    IP Version

cflow.ipv4_ident      IPv4Ident
    Unsigned 16-bit integer
    IPv4 Identifier
```

```
cflow.is_multicast  IsMulticast
    Unsigned 8-bit integer
    Is Multicast

cflow.len  Length
    Unsigned 16-bit integer
    Length of PDUs

cflow.length_max  MaxLength
    Unsigned 16-bit integer
    Packet Length Max

cflow.length_min  MinLength
    Unsigned 16-bit integer
    Packet Length Min

cflow.muloctets  MulticastOctets
    Unsigned 32-bit integer
    Count of multicast octets

cflow.mulpackets  MulticastPackets
    Unsigned 32-bit integer
    Count of multicast packets

cflow.nexthop  NextHop
    IPv4 address
    Router nexthop

cflow.nexthopv6  NextHop
    IPv6 address
    Router nexthop

cflow.octets  Octets
    Unsigned 32-bit integer
    Count of bytes

cflow.octets64  Octets
    Unsigned 64-bit integer
    Count of bytes

cflow.octets_squared  OctetsSquared
    Unsigned 64-bit integer
    Octets Squared

cflow.octetsexp  OctetsExp
    Unsigned 32-bit integer
    Octets exported

cflow.option_length  Option Length
    Unsigned 16-bit integer
    Option length

cflow.option_map  OptionMap
    Byte array
    Option Map

cflow.option_scope_length  Option Scope Length
    Unsigned 16-bit integer
    Option scope length

cflow.options_flowset_id  Options FlowSet
    Unsigned 16-bit integer
    Options FlowSet
```

```
cflow.outputint  OutputInt
    Unsigned 16-bit integer
    Flow Output Interface

cflow.packets    Packets
    Unsigned 32-bit integer
    Count of packets

cflow.packets64  Packets
    Unsigned 64-bit integer
    Count of packets

cflow.packetsexp PacketsExp
    Unsigned 32-bit integer
    Packets exported

cflow.packetsout PacketsOut
    Unsigned 64-bit integer
    Count of packets going out

cflow.peer_dstas PeerDstAS
    Unsigned 16-bit integer
    Peer Destination AS

cflow.peer_srcas PeerSrcAS
    Unsigned 16-bit integer
    Peer Source AS

cflow.protocol  Protocol
    Unsigned 8-bit integer
    IP Protocol

cflow.routersc   Router Shortcut
    IPv4 address
    Router shortcut by switch

cflow.sampler_mode  SamplerMode
    Unsigned 8-bit integer
    Flow Sampler Mode

cflow.sampler_name  SamplerName
    String
    Sampler Name

cflow.sampler_random_interval  SamplerRandomInterval
    Unsigned 32-bit integer
    Flow Sampler Random Interval

cflow.samplerate  SampleRate
    Unsigned 16-bit integer
    Sample Frequency of exporter

cflow.sampling_algorithm  Sampling algorithm
    Unsigned 8-bit integer
    Sampling algorithm

cflow.sampling_interval  Sampling interval
    Unsigned 32-bit integer
    Sampling interval

cflow.samplingmode  SamplingMode
    Unsigned 16-bit integer
    Sampling Mode of exporter
```

```
cflow.scope      Scope Unknown
    Byte array
    Option Scope Unknown

cflow.scope_cache  ScopeCache
    Byte array
    Option Scope Cache

cflow.scope_field_length  Scope Field Length
    Unsigned 16-bit integer
    Scope field length

cflow.scope_field_type  Scope Type
    Unsigned 16-bit integer
    Scope field type

cflow.scope_interface  ScopeInterface
    Unsigned 32-bit integer
    Option Scope Interface

cflow.scope_linecard  ScopeLinecard
    Byte array
    Option Scope Linecard

cflow.scope_system  ScopeSystem
    IPv4 address
    Option Scope System

cflow.scope_template  ScopeTemplate
    Byte array
    Option Scope Template

cflow.section_header  SectionHeader
    Byte array
    Header of Packet

cflow.section_payload  SectionPayload
    Byte array
    Payload of Packet

cflow.sequence  FlowSequence
    Unsigned 32-bit integer
    Sequence number of flows seen

cflow.source_id  SourceId
    Unsigned 32-bit integer
    Identifier for export device

cflow.srcaddr  SrcAddr
    IPv4 address
    Flow Source Address

cflow.srcaddrv6  SrcAddr
    IPv6 address
    Flow Source Address

cflow.srcas  SrcAS
    Unsigned 16-bit integer
    Source AS

cflow.srcmask  SrcMask
    Unsigned 8-bit integer
    Source Prefix Mask
```

```
cflow.srcmaskv6  SrcMask
    Unsigned 8-bit integer
    IPv6 Source Prefix Mask

cflow.srcnet    SrcNet
    IPv4 address
    Flow Source Network

cflow.srcport   SrcPort
    Unsigned 16-bit integer
    Flow Source Port

cflow.srcprefix SrcPrefix
    IPv4 address
    Flow Source Prefix

cflow.sysuptime SysUptime
    Unsigned 32-bit integer
    Time since router booted (in milliseconds)

cflow.tcp_windows_size  TCP Windows Size
    Unsigned 16-bit integer
    TCP Windows size

cflow.tcpflags  TCP Flags
    Unsigned 8-bit integer
    TCP Flags

cflow.template_field_count  Field Count
    Unsigned 16-bit integer
    Template field count

cflow.template_field_length  Length
    Unsigned 16-bit integer
    Template field length

cflow.template_field_type  Type
    Unsigned 16-bit integer
    Template field type

cflow.template_flowset_id  Template FlowSet
    Unsigned 16-bit integer
    Template FlowSet

cflow.template_id  Template Id
    Unsigned 16-bit integer
    Template Id

cflow.timedelta  Duration
    Time duration
    Duration of flow sample (end - start)

cflow.timeend  EndTime
    Time duration
    Uptime at end of flow

cflow.timestamp  Timestamp
    Date/Time stamp
    Current seconds since epoch

cflow.timestart  StartTime
    Time duration
    Uptime at start of flow
```

```
cflow.toplabeladdr  TopLabelAddr
    IPv4 address
    Top MPLS label PE address
cflow.toplabeltype  TopLabelType
    Unsigned 8-bit integer
    Top MPLS label Type
cflow.tos           IP ToS
    Unsigned 8-bit integer
    IP Type of Service
cflow.ttl_max      MaxTTL
    Unsigned 8-bit integer
    TTL maximum
cflow.ttl_min      MinTTL
    Unsigned 8-bit integer
    TTL minimum
cflow.udp_length   UDP Length
    Unsigned 16-bit integer
    UDP length
cflow.unix_nsecs   CurrentNSecs
    Unsigned 32-bit integer
    Residual nanoseconds since epoch
cflow.unix_secs    CurrentSecs
    Unsigned 32-bit integer
    Current seconds since epoch
cflow.version      Version
    Unsigned 16-bit integer
    NetFlow Version
```

**Cisco SLARP (slarp)**

```
slarp.address      Address
    IPv4 address
slarp.mysequence   Outgoing sequence number
    Unsigned 32-bit integer
slarp.ptype        Packet type
    Unsigned 32-bit integer
slarp.yoursequence Returned sequence number
    Unsigned 32-bit integer
```

**Cisco Session Management (sm)**

```
sm.bearer         Bearer ID
    Unsigned 16-bit integer
sm.channel         Channel ID
    Unsigned 16-bit integer
sm.context         Context
    Unsigned 32-bit integer
    Context(guesswork!)
```

```
sm.eisup_message_id  Message id
    Unsigned 8-bit integer
    Message id(guesswork!)
sm.ip_addr  IPv4 address
    IPv4 address
    IPv4 address
sm.len  Length
    Unsigned 16-bit integer
sm.msg_type  Message Type
    Unsigned 16-bit integer
sm.msgid  Message ID
    Unsigned 16-bit integer
sm.protocol  Protocol Type
    Unsigned 16-bit integer
sm.sm_msg_type  SM Message Type
    Unsigned 32-bit integer
sm.tag  Tag
    Unsigned 16-bit integer
    Tag(guesswork!)
```

#### **Cisco Wireless IDS Captures (cwids)**

```
cwids.caplen  Capture length
    Unsigned 16-bit integer
    Captured bytes in record
cwids.channel  Channel
    Unsigned 8-bit integer
    Channel for this capture
cwids.reallen  Original length
    Unsigned 16-bit integer
    Original num bytes in frame
cwids.unknown1  Unknown1
    Byte array
    1st Unknown block - timestamp?
cwids.unknown2  Unknown2
    Byte array
    2nd Unknown block
cwids.unknown3  Unknown3
    Byte array
    3rd Unknown block
cwids.version  Capture Version
    Unsigned 16-bit integer
    Version or format of record
```

#### **Cisco Wireless LAN Context Control Protocol (wlccp)**

```
wlccp.80211_apsd_flag  APSD flag
    Unsigned 16-bit integer
    APSD Flag
```

```
wlccp.80211_capabilities 802.11 Capabilities Flags
    Unsigned 16-bit integer
    802.11 Capabilities Flags

wlccp.80211_cf_poll_req_flag CF Poll Request flag
    Unsigned 16-bit integer
    CF Poll Request Flag

wlccp.80211_cf_pollable_flag CF Pollable flag
    Unsigned 16-bit integer
    CF Pollable Flag

wlccp.80211_chan_agility_flag Channel Agility flag
    Unsigned 16-bit integer
    Channel Agility Flag

wlccp.80211_ess_flag ESS flag
    Unsigned 16-bit integer
    Set on by APs in Beacon or Probe Response

wlccp.80211_ibss_flag IBSS flag
    Unsigned 16-bit integer
    Set on by STAs in Beacon or Probe Response

wlccp.80211_pbcc_flag PBCC flag
    Unsigned 16-bit integer
    PBCC Flag

wlccp.80211_qos_flag QOS flag
    Unsigned 16-bit integer
    QOS Flag

wlccp.80211_reserved Reserved
    Unsigned 16-bit integer
    Reserved

wlccp.80211_short_preamble_flag Short Preamble flag
    Unsigned 16-bit integer
    Short Preamble Flag

wlccp.80211_short_time_slot_flag Short Time Slot flag
    Unsigned 16-bit integer
    Short Time Slot Flag

wlccp.80211_spectrum_mgmt_flag Spectrum Management flag
    Unsigned 16-bit integer
    Spectrum Management Flag

wlccp.aaa_auth_type AAA Authentication Type
    Unsigned 8-bit integer
    AAA Authentication Type

wlccp.aaa_keymgmt_type AAA Key Management Type
    Unsigned 8-bit integer
    AAA Key Management Type

wlccp.aaa_msg_type AAA Message Type
    Unsigned 8-bit integer
    AAA Message Type

wlccp.ack_required_flag Ack Required flag
    Unsigned 16-bit integer
    Set on to require an acknowledgement
```

```
wlccp.age Age
    Unsigned 32-bit integer
    Time since AP became a WDS master

wlccp.apnodeid AP Node ID
    No value
    AP Node ID

wlccp.apnodeidaddress AP Node Address
    6-byte Hardware (MAC) Address
    AP Node Address

wlccp.apnodetype AP Node Type
    Unsigned 16-bit integer
    AP Node Type

wlccp.apregstatus Registration Status
    Unsigned 8-bit integer
    AP Registration Status

wlccp.auth_type Authentication Type
    Unsigned 8-bit integer
    Authentication Type

wlccp.base_message_type Base message type
    Unsigned 8-bit integer
    Base message type

wlccp.beacon_interval Beacon Interval
    Unsigned 16-bit integer
    Beacon Interval

wlccp.bssid BSS ID
    6-byte Hardware (MAC) Address
    Basic Service Set ID

wlccp.cca_busy CCA Busy
    Unsigned 8-bit integer
    CCA Busy

wlccp.channel Channel
    Unsigned 8-bit integer
    Channel

wlccp.cisco_acctg_msg Cisco Accounting Message
    Byte array
    Cisco Accounting Message

wlccp.client_mac Client MAC
    6-byte Hardware (MAC) Address
    Client MAC

wlccp.dest_node_id Destination node ID
    6-byte Hardware (MAC) Address
    Destination node ID

wlccp.dest_node_type Destination node type
    Unsigned 16-bit integer
    Destination node type

wlccp.destination_node_type Destination node type
    Unsigned 16-bit integer
    Node type of the hop destination
```

```
wlccp.dsss_dlyd_block_ack_flag  Delayed Block Ack Flag
    Unsigned 16-bit integer
    Delayed Block Ack Flag

wlccp.dsss_imm_block_ack_flag  Immediate Block Ack Flag
    Unsigned 16-bit integer
    Immediate Block Ack Flag

wlccp.dsss_ofdm_flag  DSSS-OFDM Flag
    Unsigned 16-bit integer
    DSSS-OFDM Flag

wlccp.dstmac  Dst MAC
    6-byte Hardware (MAC) Address
    Destination MAC address

wlccp.duration  Duration
    Unsigned 16-bit integer
    Duration

wlccp.eap_msg  EAP Message
    Byte array
    EAP Message

wlccp.eap_pkt_length  EAP Packet Length
    Unsigned 16-bit integer
    EAPOL Type

wlccp.eapol_msg  EAPOL Message
    No value
    EAPOL Message

wlccp.eapol_type  EAPOL Type
    Unsigned 8-bit integer
    EAPOL Type

wlccp.eapol_version  EAPOL Version
    Unsigned 8-bit integer
    EAPOL Version

wlccp.element_count  Element Count
    Unsigned 8-bit integer
    Element Count

wlccp.flags  Flags
    Unsigned 16-bit integer
    Flags

wlccp.framereport_elements  Frame Report Elements
    No value
    Frame Report Elements

wlccp.hops  Hops
    Unsigned 8-bit integer
    Number of WLCCP hops

wlccp.hopwise_routing_flag  Hopwise-routing flag
    Unsigned 16-bit integer
    On to force intermediate access points to process the message also

wlccp.hostname  Hostname
    String
    Hostname of device
```

```
wlccp.inbound_flag  Inbound flag
    Unsigned 16-bit integer
    Message is inbound to the top of the topology tree

wlccp.interval  Interval
    Unsigned 16-bit integer
    Interval

wlccp.ipv4_address  IPv4 Address
    IPv4 address
    IPv4 address

wlccp.key_mgmt_type  Key Management type
    Unsigned 8-bit integer
    Key Management type

wlccp.key_seq_count  Key Sequence Count
    Unsigned 32-bit integer
    Key Sequence Count

wlccp.length  Length
    Unsigned 16-bit integer
    Length of WLCCP payload (bytes)

wlccp.mfp_capability  MFP Capability
    Unsigned 16-bit integer
    MFP Capability

wlccp.mfp_config  MFP Config
    Unsigned 16-bit integer
    MFP Config

wlccp.mfp_flags  MFP Flags
    Unsigned 16-bit integer
    MFP Flags

wlccp.mic_flag  MIC flag
    Unsigned 16-bit integer
    On in a message that must be authenticated and has an authentication TLV

wlccp.mic_length  MIC Length
    Unsigned 16-bit integer
    MIC Length

wlccp.mic_msg_seq_count  MIC Message Sequence Count
    Unsigned 64-bit integer
    MIC Message Sequence Count

wlccp.mic_value  MIC Value
    Byte array
    MIC Value

wlccp.mode  Mode
    Unsigned 8-bit integer
    Mode

wlccp.msg_id  Message ID
    Unsigned 16-bit integer
    Sequence number used to match request/reply pairs

wlccp.nm_capability  NM Capability
    Unsigned 8-bit integer
    NM Capability
```

```
wlccp.nm_version  NM Version
    Unsigned 8-bit integer
    NM Version

wlccp.nmconfig    NM Config
    Unsigned 8-bit integer
    NM Config

wlccp.nonce_value Nonce Value
    Byte array
    Nonce Value

wlccp.numframes  Number of frames
    Unsigned 8-bit integer
    Number of Frames

wlccp.originator Originator
    6-byte Hardware (MAC) Address
    Originating device's MAC address

wlccp.originator_node_type Originator node type
    Unsigned 16-bit integer
    Originating device's node type

wlccp.outbound_flag Outbound flag
    Unsigned 16-bit integer
    Message is outbound from the top of the topology tree

wlccp.parent_ap_mac Parent AP MAC
    6-byte Hardware (MAC) Address
    Parent AP MAC

wlccp.parenttsf  Parent TSF
    Unsigned 32-bit integer
    Parent TSF

wlccp.path_init_reserved Reserved
    Unsigned 8-bit integer
    Reserved

wlccp.path_length Path Length
    Unsigned 8-bit integer
    Path Length

wlccp.period     Period
    Unsigned 8-bit integer
    Interval between announcements (seconds)

wlccp.phy_type   PHY Type
    Unsigned 8-bit integer
    PHY Type

wlccp.priority   WDS priority
    Unsigned 8-bit integer
    WDS priority of this access point

wlccp.radius_username RADIUS Username
    String
    RADIUS Username

wlccp.refresh_request_id Refresh Request ID
    Unsigned 32-bit integer
    Refresh Request ID
```

wlccp.reg\_lifetime Reg. LifeTime  
Unsigned 8-bit integer  
Reg. LifeTime

wlccp.relay\_flag Relay flag  
Unsigned 16-bit integer  
Signifies that this header is immediately followed by a relay node field

wlccp.relay\_node\_id Relay node ID  
6-byte Hardware (MAC) Address  
Node which relayed this message

wlccp.relay\_node\_type Relay node type  
Unsigned 16-bit integer  
Type of node which relayed this message

wlccp.requ\_node\_type Requestor node type  
Unsigned 16-bit integer  
Requesting device's node type

wlccp.request\_reply\_flag Request Reply flag  
Unsigned 8-bit integer  
Set on to request a reply

wlccp.requestor Requestor  
6-byte Hardware (MAC) Address  
Requestor device's MAC address

wlccp.responder Responder  
6-byte Hardware (MAC) Address  
Responding device's MAC address

wlccp.responder\_node\_type Responder node type  
Unsigned 16-bit integer  
Responding device's node type

wlccp.response\_request\_flag Response request flag  
Unsigned 16-bit integer  
Set on to request a reply

wlccp.retry\_flag Retry flag  
Unsigned 16-bit integer  
Set on for retransmissions

wlccp.rm\_flags RM Flags  
Unsigned 8-bit integer  
RM Flags

wlccp.root\_cm\_flag Root context manager flag  
Unsigned 16-bit integer  
Set to on to send message to the root context manager of the topology tree

wlccp.rpi\_denisty RPI Density  
Byte array  
RPI Density

wlccp.rss RSS  
Signed 8-bit integer  
Received Signal Strength

wlccp.sap SAP  
Unsigned 8-bit integer  
Service Access Point

```
wlccp.sap_id    SAP ID
    Unsigned 8-bit integer
    Service Access Point ID

wlccp.sap_version  SAP Version
    Unsigned 8-bit integer
    Service Access Point Version

wlccp.scan_mode   Scan Mode
    Unsigned 8-bit integer
    Scan Mode

wlccp.scmattach_state  SCM Attach State
    Unsigned 8-bit integer
    SCM Attach State

wlccp.scmstate_change  SCM State Change
    Unsigned 8-bit integer
    SCM State Change

wlccp.scmstate_change_reason  SCM State Change Reason
    Unsigned 8-bit integer
    SCM State Change Reason

wlccp.session_timeout  Session Timeout
    Unsigned 32-bit integer
    Session Timeout

wlccp.source_node_id  Source node ID
    6-byte Hardware (MAC) Address
    Source node ID

wlccp.source_node_type  Source node type
    Unsigned 16-bit integer
    Source node type

wlccp.srcidx  Source Index
    Unsigned 8-bit integer
    Source Index

wlccp.srcmac  Src MAC
    6-byte Hardware (MAC) Address
    Source MAC address

wlccp.station_mac  Station MAC
    6-byte Hardware (MAC) Address
    Station MAC

wlccp.station_type  Station Type
    Unsigned 8-bit integer
    Station Type

wlccp.status  Status
    Unsigned 8-bit integer
    Status

wlccp.subtype  Subtype
    Unsigned 8-bit integer
    Message Subtype

wlccp.supp_node_id  Supporting node ID
    6-byte Hardware (MAC) Address
    Supporting node ID
```

```
wlccp.supp_node_type  Destination node type
    Unsigned 16-bit integer
    Destination node type

wlccp.targettsf  Target TSF
    Unsigned 64-bit integer
    Target TSF

wlccp.time_elapsed  Elapsed Time
    Unsigned 16-bit integer
    Elapsed Time

wlccp.timestamp  Timestamp
    Unsigned 64-bit integer
    Registration Timestamp

wlccp.tlv  WLCCP TLV
    No value
    WLCCP TLV

wlccp.tlv80211  802.11 TLV Value
    Byte array
    802.11 TLV Value

wlccp.tlv_container_flag  TLV Container Flag
    Unsigned 16-bit integer
    Set on if the TLV is a container

wlccp.tlv_encrypted_flag  TLV Encrypted Flag
    Unsigned 16-bit integer
    Set on if the TLV is encrypted

wlccp.tlv_flag  TLV flag
    Unsigned 16-bit integer
    Set to indicate that optional TLVs follow the fixed fields

wlccp.tlv_flags  TLV Flags
    Unsigned 16-bit integer
    TLV Flags, Group and Type

wlccp.tlv_length  TLV Length
    Unsigned 16-bit integer
    TLV Length

wlccp.tlv_request_flag  TLV Request Flag
    Unsigned 16-bit integer
    Set on if the TLV is a request

wlccp.tlv_reserved_bit  Reserved bits
    Unsigned 16-bit integer
    Reserved

wlccp.tlv_unknown_value  Unknown TLV Contents
    Byte array
    Unknown TLV Contents

wlccp.token  Token
    Unsigned 8-bit integer
    Token

wlccp.token2  2 Byte Token
    Unsigned 16-bit integer
    2 Byte Token
```

```
wlccp.type      Message Type
                Unsigned 8-bit integer
                Message Type

wlccp.version   Version
                Unsigned 8-bit integer
                Protocol ID/Version

wlccp.wds_reason Reason Code
                Unsigned 8-bit integer
                Reason Code

wlccp.wids_msg_type WIDS Message Type
                Unsigned 8-bit integer
                WIDS Message Type

wlccp.wlccp_null_tlv NULL TLV
                Byte array
                NULL TLV

wlccp.wlccp_tlv_group TLV Group
                Unsigned 16-bit integer
                TLV Group ID

wlccp.wlccp_tlv_type TLV Type
                Unsigned 16-bit integer
                TLV Type ID
```

**Clearcase NFS (clearcase)**

```
clearcase.procedure_v3 V3 Procedure
                Unsigned 32-bit integer
                V3 Procedure
```

**Cluster TDB (ctdb)**

```
ctdb.callid     Call Id
                Unsigned 32-bit integer
                Call ID

ctdb.clientid   ClientId
                Unsigned 32-bit integer

ctdb.ctrl_flags CTRL Flags
                Unsigned 32-bit integer

ctdb.ctrl_opcode CTRL Opcode
                Unsigned 32-bit integer

ctdb.data       Data
                Byte array

ctdb.datalen    Data Length
                Unsigned 32-bit integer

ctdb.dbid       DB Id
                Unsigned 32-bit integer
                Database ID

ctdb.dmaster    Dmaster
                Unsigned 32-bit integer
```

```
ctdb.dst Destination
    Unsigned 32-bit integer
ctdb.error Error
    Byte array
ctdb.errorlen Error Length
    Unsigned 32-bit integer
ctdb.generation Generation
    Unsigned 32-bit integer
ctdb.hopcount Hopcount
    Unsigned 32-bit integer
ctdb.id Id
    Unsigned 32-bit integer
    Transaction ID
ctdb.immediate Immediate
    Boolean
    Force migration of DMASTER?
ctdb.key Key
    Byte array
ctdb.keyhash KeyHash
    Unsigned 32-bit integer
ctdb.keylen Key Length
    Unsigned 32-bit integer
ctdb.len Length
    Unsigned 32-bit integer
    Size of CTDB PDU
ctdb.magic Magic
    Unsigned 32-bit integer
ctdb.node_flags Node Flags
    Unsigned 32-bit integer
ctdb.node_ip Node IP
    IPv4 address
ctdb.num_nodes Num Nodes
    Unsigned 32-bit integer
ctdb.opcode Opcode
    Unsigned 32-bit integer
    CTDB command opcode
ctdb.pid PID
    Unsigned 32-bit integer
ctdb.process_exists Process Exists
    Boolean
ctdb.recmaster Recovery Master
    Unsigned 32-bit integer
ctdb.recmode Recovery Mode
    Unsigned 32-bit integer
ctdb.request_in Request In
    Frame number
```

```

ctdb.response_in  Response In
                  Frame number
ctdb.rsn          RSN
                  Unsigned 64-bit integer
ctdb.src          Source
                  Unsigned 32-bit integer
ctdb.srvid        SrvId
                  Unsigned 64-bit integer
ctdb.status       Status
                  Unsigned 32-bit integer
ctdb.time         Time since request
                  Time duration
ctdb.version      Version
                  Unsigned 32-bit integer
ctdb.vnn          VNN
                  Unsigned 32-bit integer
ctdb.xid          xid
                  Unsigned 32-bit integer

```

#### **CoSine IPNOS L2 debug output (cosine)**

```

cosine.err        Error Code
                  Unsigned 8-bit integer
cosine.off        Offset
                  Unsigned 8-bit integer
cosine.pri        Priority
                  Unsigned 8-bit integer
cosine.pro        Protocol
                  Unsigned 8-bit integer
cosine.rm         Rate Marking
                  Unsigned 8-bit integer

```

#### **Common Image Generator Interface (cigi)**

```

cigi.3_2_los_ext_response  Line of Sight Extended Response
                           String
                           Line of Sight Extended Response Packet
cigi.3_2_los_ext_response.alpha  Alpha
                           Unsigned 8-bit integer
                           Indicates the alpha component of the surface at the point of intersection
cigi.3_2_los_ext_response.alt_zoff  Altitude (m)/Z Offset(m)
                           Double-precision floating point
                           Indicates the geodetic altitude of the point of intersection along the LOS t
cigi.3_2_los_ext_response.blue  Blue
                           Unsigned 8-bit integer
                           Indicates the blue color component of the surface at the point of intersecti
cigi.3_2_los_ext_response.entity_id  Entity ID
                           Unsigned 16-bit integer
                           Indicates the entity with which a LOS test vector or segment intersects

```

```

cigi.3_2_los_ext_response.entity_id_valid  Entity ID Valid
    Boolean
    Indicates whether the LOS test vector or segment intersects with an entity
cigi.3_2_los_ext_response.green  Green
    Unsigned 8-bit integer
    Indicates the green color component of the surface at the point of intersect
cigi.3_2_los_ext_response.host_frame_number_lsn  Host Frame Number LSN
    Unsigned 8-bit integer
    Least significant nibble of the host frame number parameter of the last IG C
cigi.3_2_los_ext_response.lat_xoff  Latitude (degrees)/X Offset (m)
    Double-precision floating point
    Indicates the geodetic latitude of the point of intersection along the LOS t
cigi.3_2_los_ext_response.lon_yoff  Longitude (degrees)/Y Offset (m)
    Double-precision floating point
    Indicates the geodetic longitude of the point of intersection along the LOS
cigi.3_2_los_ext_response.los_id  LOS ID
    Unsigned 16-bit integer
    Identifies the LOS response
cigi.3_2_los_ext_response.material_code  Material Code
    Unsigned 32-bit integer
    Indicates the material code of the surface intersected by the LOS test segme
cigi.3_2_los_ext_response.normal_vector_azimuth  Normal Vector Azimuth (degrees)
    Indicates the azimuth of a unit vector normal to the surface intersected by
cigi.3_2_los_ext_response.normal_vector_elevation  Normal Vector Elevation (degr
    Indicates the elevation of a unit vector normal to the surface intersected b
cigi.3_2_los_ext_response.range  Range (m)
    Double-precision floating point
    Indicates the distance along the LOS test segment or vector from the source
cigi.3_2_los_ext_response.range_valid  Range Valid
    Boolean
    Indicates whether the Range parameter is valid
cigi.3_2_los_ext_response.red  Red
    Unsigned 8-bit integer
    Indicates the red color component of the surface at the point of intersectio
cigi.3_2_los_ext_response.response_count  Response Count
    Unsigned 8-bit integer
    Indicates the total number of Line of Sight Extended Response packets the IG
cigi.3_2_los_ext_response.valid  Valid
    Boolean
    Indicates whether this packet contains valid data
cigi.3_2_los_ext_response.visible  Visible
    Boolean
    Indicates whether the destination point is visible from the source point
cigi.aerosol_concentration_response  Aerosol Concentration Response
    String
    Aerosol Concentration Response Packet

```

cigi.aerosol\_concentration\_response.aerosol\_concentration Aerosol Concentration  
Identifies the concentration of airborne particles

cigi.aerosol\_concentration\_response.layer\_id Layer ID  
Unsigned 8-bit integer  
Identifies the weather layer whose aerosol concentration is being described

cigi.aerosol\_concentration\_response.request\_id Request ID  
Unsigned 8-bit integer  
Identifies the environmental conditions request to which this response packet

cigi.animation\_stop\_notification Animation Stop Notification  
String  
Animation Stop Notification Packet

cigi.animation\_stop\_notification.entity\_id Entity ID  
Unsigned 16-bit integer  
Indicates the entity ID of the animation that has stopped

cigi.art\_part\_control Articulated Parts Control  
String  
Articulated Parts Control Packet

cigi.art\_part\_control.entity\_id Entity ID  
Unsigned 16-bit integer  
Identifies the entity to which this data packet will be applied

cigi.art\_part\_control.part\_enable Articulated Part Enable  
Boolean  
Determines whether the articulated part submodel should be enabled or disabled

cigi.art\_part\_control.part\_id Articulated Part ID  
Unsigned 8-bit integer  
Identifies which articulated part is controlled with this data packet

cigi.art\_part\_control.part\_state Articulated Part State  
Boolean  
Indicates whether an articulated part is to be shown in the display

cigi.art\_part\_control.pitch Pitch (degrees)  
Specifies the pitch of this part with respect to the submodel coordinate system

cigi.art\_part\_control.pitch\_enable Pitch Enable  
Boolean  
Identifies whether the articulated part pitch enable in this data packet is

cigi.art\_part\_control.roll Roll (degrees)  
Specifies the roll of this part with respect to the submodel coordinate system

cigi.art\_part\_control.roll\_enable Roll Enable  
Boolean  
Identifies whether the articulated part roll enable in this data packet is

cigi.art\_part\_control.x\_offset X Offset (m)  
Identifies the distance along the X axis by which the articulated part should

cigi.art\_part\_control.xoff X Offset (m)  
Specifies the distance of the articulated part along its X axis

`cigi.art_part_control.xoff_enable` X Offset Enable  
Boolean  
Identifies whether the articulated part x offset in this data packet is mani

`cigi.art_part_control.y_offset` Y Offset (m)  
Identifies the distance along the Y axis by which the articulated part shoul

`cigi.art_part_control.yaw` Yaw (degrees)  
Specifies the yaw of this part with respect to the submodel coordinate syste

`cigi.art_part_control.yaw_enable` Yaw Enable  
Unsigned 8-bit integer  
Identifies whether the articulated part yaw enable in this data packet is ma

`cigi.art_part_control.yoff` Y Offset (m)  
Specifies the distance of the articulated part along its Y axis

`cigi.art_part_control.yoff_enable` Y Offset Enable  
Boolean  
Identifies whether the articulated part y offset in this data packet is mani

`cigi.art_part_control.z_offset` Z Offset (m)  
Identifies the distance along the Z axis by which the articulated part shoul

`cigi.art_part_control.zoff` Z Offset (m)  
Specifies the distance of the articulated part along its Z axis

`cigi.art_part_control.zoff_enable` Z Offset Enable  
Boolean  
Identifies whether the articulated part z offset in this data packet is mani

`cigi.atmosphere_control` Atmosphere Control  
String  
Atmosphere Control Packet

`cigi.atmosphere_control.air_temp` Global Air Temperature (degrees C)  
Specifies the global air temperature of the environment

`cigi.atmosphere_control.atmospheric_model_enable` Atmospheric Model Enable  
Boolean  
Specifies whether the IG should use an atmospheric model to determine spectr

`cigi.atmosphere_control.barometric_pressure` Global Barometric Pressure (mb or h  
Specifies the global atmospheric pressure

`cigi.atmosphere_control.horiz_wind` Global Horizontal Wind Speed (m/s)  
Specifies the global wind speed parallel to the ellipsoid-tangential referen

`cigi.atmosphere_control.humidity` Global Humidity (%)  
Unsigned 8-bit integer  
Specifies the global humidity of the environment

`cigi.atmosphere_control.vert_wind` Global Vertical Wind Speed (m/s)  
Specifies the global vertical wind speed

`cigi.atmosphere_control.visibility_range` Global Visibility Range (m)  
Specifies the global visibility range through the atmosphere

`cigi.atmosphere_control.wind_direction` Global Wind Direction (degrees)

Specifies the global wind direction

`cigi.byte_swap` Byte Swap  
Unsigned 16-bit integer  
Used to determine whether the incoming data should be byte-swapped

`cigi.celestial_sphere_control` Celestial Sphere Control  
String  
Celestial Sphere Control Packet

`cigi.celestial_sphere_control.date` Date (MMDDYYYY)  
Unsigned 32-bit integer  
Specifies the current date within the simulation

`cigi.celestial_sphere_control.date_time_valid` Date/Time Valid  
Boolean  
Specifies whether the Hour, Minute, and Date parameters are valid

`cigi.celestial_sphere_control.ephemeris_enable` Ephemeris Model Enable  
Boolean  
Controls whether the time of day is static or continuous

`cigi.celestial_sphere_control.hour` Hour (h)  
Unsigned 8-bit integer  
Specifies the current hour of the day within the simulation

`cigi.celestial_sphere_control.minute` Minute (min)  
Unsigned 8-bit integer  
Specifies the current minute of the day within the simulation

`cigi.celestial_sphere_control.moon_enable` Moon Enable  
Boolean  
Specifies whether the moon is enabled in the sky model

`cigi.celestial_sphere_control.star_enable` Star Field Enable  
Boolean  
Specifies whether the star field is enabled in the sky model

`cigi.celestial_sphere_control.star_intensity` Star Field Intensity (%)  
Specifies the intensity of the star field within the sky model

`cigi.celestial_sphere_control.sun_enable` Sun Enable  
Boolean  
Specifies whether the sun is enabled in the sky model

`cigi.coll_det_seg_def` Collision Detection Segment Definition  
String  
Collision Detection Segment Definition Packet

`cigi.coll_det_seg_def.collusion_mask` Collision Mask  
Byte array  
Indicates which environment features will be included in or excluded from collision detection

`cigi.coll_det_seg_def.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates the entity to which this collision detection definition is assigned

`cigi.coll_det_seg_def.material_mask` Material Mask  
Unsigned 32-bit integer  
Specifies the environmental and cultural features to be included in or excluded from collision detection

`cigi.coll_det_seg_def.segment_enable` Segment Enable  
Boolean  
Indicates whether the defined segment is enabled for collision testing

`cigi.coll_det_seg_def.segment_id` Segment ID  
Unsigned 8-bit integer  
Indicates which segment is being uniquely defined for the given entity

`cigi.coll_det_seg_def.x1` X1 (m)  
Specifies the X offset of one endpoint of the collision segment

`cigi.coll_det_seg_def.x2` X2 (m)  
Specifies the X offset of one endpoint of the collision segment

`cigi.coll_det_seg_def.x_end` Segment X End (m)  
Specifies the ending point of the collision segment in the X-axis with respect to the source endpoint

`cigi.coll_det_seg_def.x_start` Segment X Start (m)  
Specifies the starting point of the collision segment in the X-axis with respect to the source endpoint

`cigi.coll_det_seg_def.y1` Y1 (m)  
Specifies the Y offset of one endpoint of the collision segment

`cigi.coll_det_seg_def.y2` Y2 (m)  
Specifies the Y offset of one endpoint of the collision segment

`cigi.coll_det_seg_def.y_end` Segment Y End (m)  
Specifies the ending point of the collision segment in the Y-axis with respect to the source endpoint

`cigi.coll_det_seg_def.y_start` Segment Y Start (m)  
Specifies the starting point of the collision segment in the Y-axis with respect to the source endpoint

`cigi.coll_det_seg_def.z1` Z1 (m)  
Specifies the Z offset of one endpoint of the collision segment

`cigi.coll_det_seg_def.z2` Z2 (m)  
Specifies the Z offset of one endpoint of the collision segment

`cigi.coll_det_seg_def.z_end` Segment Z End (m)  
Specifies the ending point of the collision segment in the Z-axis with respect to the source endpoint

`cigi.coll_det_seg_def.z_start` Segment Z Start (m)  
Specifies the starting point of the collision segment in the Z-axis with respect to the source endpoint

`cigi.coll_det_seg_notification` Collision Detection Segment Notification  
String  
Collision Detection Segment Notification Packet

`cigi.coll_det_seg_notification.contacted_entity_id` Contacted Entity ID  
Unsigned 16-bit integer  
Indicates the entity with which the collision occurred

`cigi.coll_det_seg_notification.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates the entity to which the collision detection segment belongs

`cigi.coll_det_seg_notification.intersection_distance` Intersection Distance (m)  
Indicates the distance along the collision test vector from the source endpoint to the intersection point

`cigi.coll_det_seg_notification.material_code` Material Code  
Unsigned 32-bit integer  
Indicates the material code of the surface at the point of collision

`cigi.coll_det_seg_notification.segment_id` Segment ID  
Unsigned 8-bit integer  
Indicates the ID of the collision detection segment along which the collision occurred

`cigi.coll_det_seg_notification.type` Collision Type  
Boolean  
Indicates whether the collision occurred with another entity or with a non-entity

`cigi.coll_det_seg_response` Collision Detection Segment Response  
String  
Collision Detection Segment Response Packet

`cigi.coll_det_seg_response.collision_x` Collision Point X (m)  
Specifies the X component of a vector, which lies along the defined segment

`cigi.coll_det_seg_response.collision_y` Collision Point Y (m)  
Specifies the Y component of a vector, which lies along the defined segment

`cigi.coll_det_seg_response.collision_z` Collision Point Z (m)  
Specifies the Z component of a vector, which lies along the defined segment

`cigi.coll_det_seg_response.contact` Entity/Non-Entity Contact  
Boolean  
Indicates whether another entity was contacted during this collision

`cigi.coll_det_seg_response.contacted_entity` Contacted Entity ID  
Unsigned 16-bit integer  
Indicates which entity was contacted during the collision

`cigi.coll_det_seg_response.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates which entity experienced a collision

`cigi.coll_det_seg_response.material_type` Material Type  
Signed 32-bit integer  
Specifies the material type of the surface that this collision test segment is on

`cigi.coll_det_seg_response.segment_id` Segment ID  
Unsigned 8-bit integer  
Identifies the collision segment

`cigi.coll_det_vol_def` Collision Detection Volume Definition  
String  
Collision Detection Volume Definition Packet

`cigi.coll_det_vol_def.depth` Depth (m)  
Specifies the depth of the volume

`cigi.coll_det_vol_def.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates the entity to which this collision detection definition is assigned

`cigi.coll_det_vol_def.height` Height (m)  
Specifies the height of the volume

`cigi.coll_det_vol_def.pitch` Pitch (degrees)  
Specifies the pitch of the cuboid with respect to the entity's coordinate system

`cigi.coll_det_vol_def.radius_height` Radius (m)/Height (m)  
Specifies the radius of the sphere or specifies the length of the cuboid along the Z axis

`cigi.coll_det_vol_def.roll` Roll (degrees)  
Specifies the roll of the cuboid with respect to the entity's coordinate system

`cigi.coll_det_vol_def.volume_enable` Volume Enable  
Boolean  
Indicates whether the defined volume is enabled for collision testing

`cigi.coll_det_vol_def.volume_id` Volume ID  
Unsigned 8-bit integer  
Indicates which volume is being uniquely defined for a given entity

`cigi.coll_det_vol_def.volume_type` Volume Type  
Boolean  
Specifies whether the volume is spherical or cuboid

`cigi.coll_det_vol_def.width` Width (m)  
Specifies the width of the volume

`cigi.coll_det_vol_def.x` X (m)  
Specifies the X offset of the center of the volume

`cigi.coll_det_vol_def.x_offset` Centroid X Offset (m)  
Specifies the offset of the volume's centroid along the X axis with respect to the entity's coordinate system

`cigi.coll_det_vol_def.y` Y (m)  
Specifies the Y offset of the center of the volume

`cigi.coll_det_vol_def.y_offset` Centroid Y Offset (m)  
Specifies the offset of the volume's centroid along the Y axis with respect to the entity's coordinate system

`cigi.coll_det_vol_def.yaw` Yaw (degrees)  
Specifies the yaw of the cuboid with respect to the entity's coordinate system

`cigi.coll_det_vol_def.z` Z (m)  
Specifies the Z offset of the center of the volume

`cigi.coll_det_vol_def.z_offset` Centroid Z Offset (m)  
Specifies the offset of the volume's centroid along the Z axis with respect to the entity's coordinate system

`cigi.coll_det_vol_notification` Collision Detection Volume Notification  
String  
Collision Detection Volume Notification Packet

`cigi.coll_det_vol_notification.contacted_entity_id` Contacted Entity ID  
Unsigned 16-bit integer  
Indicates the entity with which the collision occurred

`cigi.coll_det_vol_notification.contacted_volume_id` Contacted Volume ID  
Unsigned 8-bit integer  
Indicates the ID of the collision detection volume with which the collision occurred

`cigi.coll_det_vol_notification.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates the entity to which the collision detection volume belongs

`cigi.coll_det_vol_notification.type` Collision Type  
Boolean  
Indicates whether the collision occurred with another entity or with a non-e

`cigi.coll_det_vol_notification.volume_id` Volume ID  
Unsigned 8-bit integer  
Indicates the ID of the collision detection volume within which the collision

`cigi.coll_det_vol_response` Collision Detection Volume Response  
String  
Collision Detection Volume Response Packet

`cigi.coll_det_vol_response.contact` Entity/Non-Entity Contact  
Boolean  
Indicates whether another entity was contacted during this collision

`cigi.coll_det_vol_response.contact_entity` Contacted Entity ID  
Unsigned 16-bit integer  
Indicates which entity was contacted with during the collision

`cigi.coll_det_vol_response.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates which entity experienced a collision

`cigi.coll_det_vol_response.volume_id` Volume ID  
Unsigned 8-bit integer  
Identifies the collision volume corresponding to the associated Collision De

`cigi.component_control` Component Control  
String  
Component Control Packet

`cigi.component_control.component_class` Component Class  
Unsigned 8-bit integer  
Identifies the class the component being controlled is in

`cigi.component_control.component_id` Component ID  
Unsigned 16-bit integer  
Identifies the component of a component class and instance ID this packet wi

`cigi.component_control.component_state` Component State  
Unsigned 16-bit integer  
Identifies the commanded state of a component

`cigi.component_control.component_val1` Component Value 1  
Identifies a continuous value to be applied to a component

`cigi.component_control.component_val2` Component Value 2  
Identifies a continuous value to be applied to a component

`cigi.component_control.data_1` Component Data 1  
Byte array  
User-defined component data

`cigi.component_control.data_2` Component Data 2  
Byte array  
User-defined component data

`cigi.component_control.data_3` Component Data 3  
Byte array  
User-defined component data

```
cigi.component_control.data_4  Component Data 4
    Byte array
    User-defined component data
cigi.component_control.data_5  Component Data 5
    Byte array
    User-defined component data
cigi.component_control.data_6  Component Data 6
    Byte array
    User-defined component data
cigi.component_control.instance_id  Instance ID
    Unsigned 16-bit integer
    Identifies the instance of the a class the component being controlled belong
cigi.conformal_clamped_entity_control  Conformal Clamped Entity Control
    String
    Conformal Clamped Entity Control Packet
cigi.conformal_clamped_entity_control.entity_id  Entity ID
    Unsigned 16-bit integer
    Specifies the entity to which this packet is applied
cigi.conformal_clamped_entity_control.lat  Latitude (degrees)
    Double-precision floating point
    Specifies the entity's geodetic latitude
cigi.conformal_clamped_entity_control.lon  Longitude (degrees)
    Double-precision floating point
    Specifies the entity's geodetic longitude
cigi.conformal_clamped_entity_control.yaw  Yaw (degrees)
    Specifies the instantaneous heading of the entity
cigi.destport  Destination Port
    Unsigned 16-bit integer
    Destination Port
cigi.earth_ref_model_def  Earth Reference Model Definition
    String
    Earth Reference Model Definition Packet
cigi.earth_ref_model_def.equatorial_radius  Equatorial Radius (m)
    Double-precision floating point
    Specifies the semi-major axis of the ellipsoid
cigi.earth_ref_model_def.erm_enable  Custom ERM Enable
    Boolean
    Specifies whether the IG should use the Earth Reference Model defined by thi
cigi.earth_ref_model_def.flattening  Flattening (m)
    Double-precision floating point
    Specifies the flattening of the ellipsoid
cigi.entity_control  Entity Control
    String
    Entity Control Packet
cigi.entity_control.alpha  Alpha
    Unsigned 8-bit integer
    Specifies the explicit alpha to be applied to the entity's geometry
```

`cigi.entity_control.alt` Altitude (m)  
Double-precision floating point  
Identifies the altitude position of the reference point of the entity in meters

`cigi.entity_control.alt_zoff` Altitude (m)/Z Offset (m)  
Double-precision floating point  
Specifies the entity's altitude or the distance from the parent's reference point

`cigi.entity_control.animation_dir` Animation Direction  
Boolean  
Specifies the direction in which an animation plays

`cigi.entity_control.animation_loop_mode` Animation Loop Mode  
Boolean  
Specifies whether an animation should be a one-shot

`cigi.entity_control.animation_state` Animation State  
Unsigned 8-bit integer  
Specifies the state of an animation

`cigi.entity_control.attach_state` Attach State  
Boolean  
Identifies whether the entity should be attached as a child to a parent

`cigi.entity_control.coll_det_request` Collision Detection Request  
Boolean  
Determines whether any collision detection segments and volumes associated with the entity are active

`cigi.entity_control.collision_detect` Collision Detection Request  
Boolean  
Identifies if collision detection is enabled for the entity

`cigi.entity_control.effect_state` Effect Animation State  
Unsigned 8-bit integer  
Identifies the animation state of a special effect

`cigi.entity_control.entity_id` Entity ID  
Unsigned 16-bit integer  
Identifies the entity motion system

`cigi.entity_control.entity_state` Entity State  
Unsigned 8-bit integer  
Identifies the entity's geometry state

`cigi.entity_control.entity_type` Entity Type  
Unsigned 16-bit integer  
Specifies the type for the entity

`cigi.entity_control.ground_ocean_clamp` Ground/Ocean Clamp  
Unsigned 8-bit integer  
Specifies whether the entity should be clamped to the ground or water surface

`cigi.entity_control.inherit_alpha` Inherit Alpha  
Boolean  
Specifies whether the entity's alpha is combined with the apparent alpha of the parent

`cigi.entity_control.internal_temp` Internal Temperature (degrees C)  
Double-precision floating point  
Specifies the internal temperature of the entity in degrees Celsius

`cigi.entity_control.lat` Latitude (degrees)  
Double-precision floating point  
Identifies the latitude position of the reference point of the entity in degrees

`cigi.entity_control.lat_xoff` Latitude (degrees)/X Offset (m)  
Double-precision floating point  
Specifies the entity's geodetic latitude or the distance from the parent's r

`cigi.entity_control.lon` Longitude (degrees)  
Double-precision floating point  
Identifies the longitude position of the reference point of the entity in de

`cigi.entity_control.lon_yoff` Longitude (°)/Y Offset (m)  
Double-precision floating point  
Specifies the entity's geodetic longitude or the distance from the parent's

`cigi.entity_control.opacity` Percent Opacity  
Specifies the degree of opacity of the entity

`cigi.entity_control.parent_id` Parent Entity ID  
Unsigned 16-bit integer  
Identifies the parent to which the entity should be attached

`cigi.entity_control.pitch` Pitch (degrees)  
Specifies the pitch angle of the entity

`cigi.entity_control.roll` Roll (degrees)  
Identifies the roll angle of the entity in degrees

`cigi.entity_control.type` Entity Type  
Unsigned 16-bit integer  
Identifies the type of the entity

`cigi.entity_control.yaw` Yaw (degrees)  
Specifies the instantaneous heading of the entity

`cigi.env_cond_request` Environmental Conditions Request  
String  
Environmental Conditions Request Packet

`cigi.env_cond_request.alt` Altitude (m)  
Double-precision floating point  
Specifies the geodetic altitude at which the environmental state is requeste

`cigi.env_cond_request.id` Request ID  
Unsigned 8-bit integer  
Identifies the environmental conditions request

`cigi.env_cond_request.lat` Latitude (degrees)  
Double-precision floating point  
Specifies the geodetic latitude at which the environmental state is requeste

`cigi.env_cond_request.lon` Longitude (degrees)  
Double-precision floating point  
Specifies the geodetic longitude at which the environmental state is request

`cigi.env_cond_request.type` Request Type  
Unsigned 8-bit integer  
Specifies the desired response type for the request

`cigi.env_control` Environment Control  
String  
Environment Control Packet

`cigi.env_control.aerosol` Aerosol (gm/m<sup>3</sup>)

Controls the liquid water content for the defined atmosphere

`cigi.env_control.air_temp` Air Temperature (degrees C)  
Identifies the global temperature of the environment

`cigi.env_control.date` Date (MMDDYYYY)  
Signed 32-bit integer  
Specifies the desired date for use by the ephemeris program within the image

`cigi.env_control.ephemeris_enable` Ephemeris Enable  
Boolean  
Identifies whether a continuous time of day or static time of day is used

`cigi.env_control.global_visibility` Global Visibility (m)  
Identifies the global visibility

`cigi.env_control.hour` Hour (h)  
Unsigned 8-bit integer  
Identifies the hour of the day for the ephemeris program within the image

`cigi.env_control.humidity` Humidity (%)  
Unsigned 8-bit integer  
Specifies the global humidity of the environment

`cigi.env_control.minute` Minute (min)  
Unsigned 8-bit integer  
Identifies the minute of the hour for the ephemeris program within the image

`cigi.env_control.modtran_enable` MODTRAN  
Boolean  
Identifies whether atmospheric will be included in the calculations

`cigi.env_control.pressure` Barometric Pressure (mb)  
Controls the atmospheric pressure input into MODTRAN

`cigi.env_control.wind_direction` Wind Direction (degrees)  
Identifies the global wind direction

`cigi.env_control.wind_speed` Wind Speed (m/s)  
Identifies the global wind speed

`cigi.env_region_control` Environmental Region Control  
String  
Environmental Region Control Packet

`cigi.env_region_control.corner_radius` Corner Radius (m)  
Specifies the radius of the corner of the rounded rectangle

`cigi.env_region_control.lat` Latitude (degrees)  
Double-precision floating point  
Specifies the geodetic latitude of the center of the rounded rectangle

`cigi.env_region_control.lon` Longitude (degrees)  
Double-precision floating point  
Specifies the geodetic longitude of the center of the rounded rectangle

`cigi.env_region_control.merge_aerosol` Merge Aerosol Concentrations  
Boolean  
Specifies whether the concentrations of aerosols found within this region sh

`cigi.env_region_control.merge_maritime` Merge Maritime Surface Conditions  
Boolean  
Specifies whether the maritime surface conditions found within this region should be merged

`cigi.env_region_control.merge_terrestrial` Merge Terrestrial Surface Conditions  
Boolean  
Specifies whether the terrestrial surface conditions found within this region should be merged

`cigi.env_region_control.merge_weather` Merge Weather Properties  
Boolean  
Specifies whether atmospheric conditions within this region should be merged

`cigi.env_region_control.region_id` Region ID  
Unsigned 16-bit integer  
Specifies the environmental region to which the data in this packet will be merged

`cigi.env_region_control.region_state` Region State  
Unsigned 8-bit integer  
Specifies whether the region should be active or destroyed

`cigi.env_region_control.rotation` Rotation (degrees)  
Specifies the yaw angle of the rounded rectangle

`cigi.env_region_control.size_x` Size X (m)  
Specifies the length of the environmental region along its X axis at the geographic location

`cigi.env_region_control.size_y` Size Y (m)  
Specifies the length of the environmental region along its Y axis at the geographic location

`cigi.env_region_control.transition_perimeter` Transition Perimeter (m)  
Specifies the width of the transition perimeter around the environmental region

`cigi.event_notification` Event Notification  
String  
Event Notification Packet

`cigi.event_notification.data_1` Event Data 1  
Byte array  
Used for user-defined event data

`cigi.event_notification.data_2` Event Data 2  
Byte array  
Used for user-defined event data

`cigi.event_notification.data_3` Event Data 3  
Byte array  
Used for user-defined event data

`cigi.event_notification.event_id` Event ID  
Unsigned 16-bit integer  
Indicates which event has occurred

`cigi.frame_size` Frame Size (bytes)  
Unsigned 8-bit integer  
Number of bytes sent with all cigi packets in this frame

`cigi.hat_hot_ext_response` HAT/HOT Extended Response  
String  
HAT/HOT Extended Response Packet

```

cigi.hat_hot_ext_response.hat  HAT
    Double-precision floating point
    Indicates the height of the test point above the terrain
cigi.hat_hot_ext_response.hat_hot_id  HAT/HOT ID
    Unsigned 16-bit integer
    Identifies the HAT/HOT response
cigi.hat_hot_ext_response.host_frame_number_lsn  Host Frame Number LSN
    Unsigned 8-bit integer
    Least significant nibble of the host frame number parameter of the last IG C
cigi.hat_hot_ext_response.hot  HOT
    Double-precision floating point
    Indicates the height of terrain above or below the test point
cigi.hat_hot_ext_response.material_code  Material Code
    Unsigned 32-bit integer
    Indicates the material code of the terrain surface at the point of intersect
cigi.hat_hot_ext_response.normal_vector_azimuth  Normal Vector Azimuth (degrees)
    Indicates the azimuth of the normal unit vector of the surface intersected b
cigi.hat_hot_ext_response.normal_vector_elevation  Normal Vector Elevation (degr
    Indicates the elevation of the normal unit vector of the surface intersected
cigi.hat_hot_ext_response.valid  Valid
    Boolean
    Indicates whether the remaining parameters in this packet contain valid numb
cigi.hat_hot_request  HAT/HOT Request
    String
    HAT/HOT Request Packet
cigi.hat_hot_request.alt_zoff  Altitude (m)/Z Offset (m)
    Double-precision floating point
    Specifies the altitude from which the HAT/HOT request is being made or speci
cigi.hat_hot_request.coordinate_system  Coordinate System
    Boolean
    Specifies the coordinate system within which the test point is defined
cigi.hat_hot_request.entity_id  Entity ID
    Unsigned 16-bit integer
    Specifies the entity relative to which the test point is defined
cigi.hat_hot_request.hat_hot_id  HAT/HOT ID
    Unsigned 16-bit integer
    Identifies the HAT/HOT request
cigi.hat_hot_request.lat_xoff  Latitude (degrees)/X Offset (m)
    Double-precision floating point
    Specifies the latitude from which the HAT/HOT request is being made or speci
cigi.hat_hot_request.lon_yoff  Longitude (degrees)/Y Offset (m)
    Double-precision floating point
    Specifies the longitude from which the HAT/HOT request is being made or spec
cigi.hat_hot_request.type  Request Type
    Unsigned 8-bit integer
    Determines the type of response packet the IG should return for this packet

```

cigi.hat\_hot\_request.update\_period Update Period  
Unsigned 8-bit integer  
Specifies interval between successive responses to this request. A zero indi

cigi.hat\_hot\_response HAT/HOT Response  
String  
HAT/HOT Response Packet

cigi.hat\_hot\_response.hat\_hot\_id HAT/HOT ID  
Unsigned 16-bit integer  
Identifies the HAT or HOT response

cigi.hat\_hot\_response.height Height  
Double-precision floating point  
Contains the requested height

cigi.hat\_hot\_response.host\_frame\_number\_lsn Host Frame Number LSN  
Unsigned 8-bit integer  
Least significant nibble of the host frame number parameter of the last IG C

cigi.hat\_hot\_response.type Response Type  
Boolean  
Indicates whether the Height parameter represent Height Above Terrain or Hei

cigi.hat\_hot\_response.valid Valid  
Boolean  
Indicates whether the Height parameter contains a valid number

cigi.hat\_request Height Above Terrain Request  
String  
Height Above Terrain Request Packet

cigi.hat\_request.alt Altitude (m)  
Double-precision floating point  
Specifies the altitude from which the HAT request is being made

cigi.hat\_request.hat\_id HAT ID  
Unsigned 16-bit integer  
Identifies the HAT request

cigi.hat\_request.lat Latitude (degrees)  
Double-precision floating point  
Specifies the latitudinal position from which the HAT request is being made

cigi.hat\_request.lon Longitude (degrees)  
Double-precision floating point  
Specifies the longitudinal position from which the HAT request is being made

cigi.hat\_response Height Above Terrain Response  
String  
Height Above Terrain Response Packet

cigi.hat\_response.alt Altitude (m)  
Double-precision floating point  
Represents the altitude above or below the terrain for the position requeste

cigi.hat\_response.hat\_id HAT ID  
Unsigned 16-bit integer  
Identifies the HAT response

cigi.hat\_response.material\_type Material Type  
Signed 32-bit integer  
Specifies the material type of the object intersected by the HAT test vector

cigi.hat\_response.valid Valid  
Boolean  
Indicates whether the response is valid or invalid

cigi.hot\_request Height of Terrain Request  
String  
Height of Terrain Request Packet

cigi.hot\_request.hot\_id HOT ID  
Unsigned 16-bit integer  
Identifies the HOT request

cigi.hot\_request.lat Latitude (degrees)  
Double-precision floating point  
Specifies the latitudinal position from which the HOT request is made

cigi.hot\_request.lon Longitude (degrees)  
Double-precision floating point  
Specifies the longitudinal position from which the HOT request is made

cigi.hot\_response Height of Terrain Response  
String  
Height of Terrain Response Packet

cigi.hot\_response.alt Altitude (m)  
Double-precision floating point  
Represents the altitude of the terrain for the position requested in the HOT

cigi.hot\_response.hot\_id HOT ID  
Unsigned 16-bit integer  
Identifies the HOT response corresponding to the associated HOT request

cigi.hot\_response.material\_type Material Type  
Signed 32-bit integer  
Specifies the material type of the object intersected by the HOT test segment

cigi.hot\_response.valid Valid  
Boolean  
Indicates whether the response is valid or invalid

cigi.ig\_control IG Control  
String  
IG Control Packet

cigi.ig\_control.boresight Tracking Device Boresight  
Boolean  
Used by the host to enable boresight mode

cigi.ig\_control.db\_number Database Number  
Signed 8-bit integer  
Identifies the number associated with the database requiring loading

cigi.ig\_control.frame\_ctr Frame Counter  
Unsigned 32-bit integer  
Identifies a particular frame

cigi.ig\_control.host\_frame\_number Host Frame Number  
Unsigned 32-bit integer  
Uniquely identifies a data frame on the host

cigi.ig\_control.ig\_mode IG Mode Change Request  
Unsigned 8-bit integer  
Commands the IG to enter its various modes

`cigi.ig_control.last_ig_frame_number` IG Frame Number  
Unsigned 32-bit integer  
Contains the value of the IG Frame Number parameter in the last Start of Fra

`cigi.ig_control.time_tag` Timing Value (microseconds)  
Identifies synchronous operation

`cigi.ig_control.timestamp` Timestamp (microseconds)  
Unsigned 32-bit integer  
Indicates the number of 10 microsecond "ticks" since some initial reference

`cigi.ig_control.timestamp_valid` Timestamp Valid  
Boolean  
Indicates whether the timestamp contains a valid value

`cigi.ig_control.tracking_enable` Tracking Device Enable  
Boolean  
Identifies the state of an external tracking device

`cigi.image_generator_message` Image Generator Message  
String  
Image Generator Message Packet

`cigi.image_generator_message.message` Message  
String  
Image generator message

`cigi.image_generator_message.message_id` Message ID  
Unsigned 16-bit integer  
Uniquely identifies an instance of an Image Generator Response Message

`cigi.los_ext_response` Line of Sight Extended Response  
String  
Line of Sight Extended Response Packet

`cigi.los_ext_response.alpha` Alpha  
Unsigned 8-bit integer  
Indicates the alpha component of the surface at the point of intersection

`cigi.los_ext_response.alt_zoff` Altitude (m)/Z Offset(m)  
Double-precision floating point  
Indicates the geodetic altitude of the point of intersection along the LOS t

`cigi.los_ext_response.blue` Blue  
Unsigned 8-bit integer  
Indicates the blue color component of the surface at the point of intersecti

`cigi.los_ext_response.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates the entity with which a LOS test vector or segment intersects

`cigi.los_ext_response.entity_id_valid` Entity ID Valid  
Boolean  
Indicates whether the LOS test vector or segment intersects with an entity

`cigi.los_ext_response.green` Green  
Unsigned 8-bit integer  
Indicates the green color component of the surface at the point of intersect

`cigi.los_ext_response.intersection_coord` Intersection Point Coordinate System  
Boolean  
Indicates the coordinate system relative to which the intersection point is

`cigi.los_ext_response.lat_xoff` Latitude (degrees)/X Offset (m)  
 Double-precision floating point  
 Indicates the geodetic latitude of the point of intersection along the LOS t

`cigi.los_ext_response.lon_yoff` Longitude (degrees)/Y Offset (m)  
 Double-precision floating point  
 Indicates the geodetic longitude of the point of intersection along the LOS

`cigi.los_ext_response.los_id` LOS ID  
 Unsigned 16-bit integer  
 Identifies the LOS response

`cigi.los_ext_response.material_code` Material Code  
 Unsigned 32-bit integer  
 Indicates the material code of the surface intersected by the LOS test segme

`cigi.los_ext_response.normal_vector_azimuth` Normal Vector Azimuth (degrees)  
 Indicates the azimuth of a unit vector normal to the surface intersected by

`cigi.los_ext_response.normal_vector_elevation` Normal Vector Elevation (degrees)  
 Indicates the elevation of a unit vector normal to the surface intersected b

`cigi.los_ext_response.range` Range (m)  
 Double-precision floating point  
 Indicates the distance along the LOS test segment or vector from the source

`cigi.los_ext_response.range_valid` Range Valid  
 Boolean  
 Indicates whether the Range parameter is valid

`cigi.los_ext_response.red` Red  
 Unsigned 8-bit integer  
 Indicates the red color component of the surface at the point of intersectio

`cigi.los_ext_response.response_count` Response Count  
 Unsigned 8-bit integer  
 Indicates the total number of Line of Sight Extended Response packets the IG

`cigi.los_ext_response.valid` Valid  
 Boolean  
 Indicates whether this packet contains valid data

`cigi.los_ext_response.visible` Visible  
 Boolean  
 Indicates whether the destination point is visible from the source point

`cigi.los_occult_request` Line of Sight Occult Request  
 String  
 Line of Sight Occult Request Packet

`cigi.los_occult_request.dest_alt` Destination Altitude (m)  
 Double-precision floating point  
 Specifies the altitude of the destination point for the LOS request segment

`cigi.los_occult_request.dest_lat` Destination Latitude (degrees)  
 Double-precision floating point  
 Specifies the latitudinal position for the destination point for the LOS req

`cigi.los_occult_request.dest_lon` Destination Longitude (degrees)  
 Double-precision floating point  
 Specifies the longitudinal position of the destination point for the LOS req

`cigi.los_occult_request.los_id` LOS ID  
Unsigned 16-bit integer  
Identifies the LOS request

`cigi.los_occult_request.source_alt` Source Altitude (m)  
Double-precision floating point  
Specifies the altitude of the source point for the LOS request segment

`cigi.los_occult_request.source_lat` Source Latitude (degrees)  
Double-precision floating point  
Specifies the latitudinal position of the source point for the LOS request segment

`cigi.los_occult_request.source_lon` Source Longitude (degrees)  
Double-precision floating point  
Specifies the longitudinal position of the source point for the LOS request segment

`cigi.los_range_request` Line of Sight Range Request  
String  
Line of Sight Range Request Packet

`cigi.los_range_request.azimuth` Azimuth (degrees)  
Specifies the azimuth of the LOS vector

`cigi.los_range_request.elevation` Elevation (degrees)  
Specifies the elevation for the LOS vector

`cigi.los_range_request.los_id` LOS ID  
Unsigned 16-bit integer  
Identifies the LOS request

`cigi.los_range_request.max_range` Maximum Range (m)  
Specifies the maximum extent from the source position specified in this data packet

`cigi.los_range_request.min_range` Minimum Range (m)  
Specifies the distance from the source position specified in this data packet

`cigi.los_range_request.source_alt` Source Altitude (m)  
Double-precision floating point  
Specifies the altitude of the source point of the LOS request vector

`cigi.los_range_request.source_lat` Source Latitude (degrees)  
Double-precision floating point  
Specifies the latitudinal position of the source point of the LOS request vector

`cigi.los_range_request.source_lon` Source Longitude (degrees)  
Double-precision floating point  
Specifies the longitudinal position of the source point of the LOS request vector

`cigi.los_response` Line of Sight Response  
String  
Line of Sight Response Packet

`cigi.los_response.alt` Intersection Altitude (m)  
Double-precision floating point  
Specifies the altitude of the point of intersection of the LOS request vector and the target

`cigi.los_response.count` Response Count  
Unsigned 8-bit integer  
Indicates the total number of Line of Sight Response packets the IG will return

cigi.los\_response.entity\_id Entity ID  
 Unsigned 16-bit integer  
 Indicates the entity with which an LOS test vector or segment intersects

cigi.los\_response.entity\_id\_valid Entity ID Valid  
 Boolean  
 Indicates whether the LOS test vector or segment intersects with an entity

cigi.los\_response.host\_frame\_number\_lsn Host Frame Number LSN  
 Unsigned 8-bit integer  
 Least significant nibble of the host frame number parameter of the last IGMP

cigi.los\_response.lat Intersection Latitude (degrees)  
 Double-precision floating point  
 Specifies the latitudinal position of the intersection point of the LOS request

cigi.los\_response.lon Intersection Longitude (degrees)  
 Double-precision floating point  
 Specifies the longitudinal position of the intersection point of the LOS request

cigi.los\_response.los\_id LOS ID  
 Unsigned 16-bit integer  
 Identifies the LOS response corresponding to the associated LOS request

cigi.los\_response.material\_type Material Type  
 Signed 32-bit integer  
 Specifies the material type of the object intersected by the LOS test segment

cigi.los\_response.occult\_response Occult Response  
 Boolean  
 Used to respond to the LOS occult request data packet

cigi.los\_response.range Range (m)  
 Used to respond to the Line of Sight Range Request data packet

cigi.los\_response.valid Valid  
 Boolean  
 Indicates whether the response is valid or invalid

cigi.los\_response.visible Visible  
 Boolean  
 Indicates whether the destination point is visible from the source point

cigi.los\_segment\_request Line of Sight Segment Request  
 String  
 Line of Sight Segment Request Packet

cigi.los\_segment\_request.alpha\_threshold Alpha Threshold  
 Unsigned 8-bit integer  
 Specifies the minimum alpha value a surface may have for an LOS response to

cigi.los\_segment\_request.destination\_alt\_zoff Destination Altitude (m)/ Destination  
 Double-precision floating point  
 Specifies the altitude of the destination endpoint of the LOS test segment

cigi.los\_segment\_request.destination\_coord Destination Point Coordinate System  
 Boolean  
 Indicates the coordinate system relative to which the test segment destination

cigi.los\_segment\_request.destination\_entity\_id Destination Entity ID  
 Unsigned 16-bit integer  
 Indicates the entity with respect to which the Destination X Offset, Y Offset

`cigi.los_segment_request.destination_entity_id_valid` Destination Entity ID Valid  
Boolean  
Destination Entity ID is valid

`cigi.los_segment_request.destination_lat_xoff` Destination Latitude (degrees)/Destination X Offset (m)  
Double-precision floating point  
Specifies the latitude of the destination endpoint of the LOS test segment or specifies the X offset of the destination endpoint

`cigi.los_segment_request.destination_lon_yoff` Destination Longitude (degrees)/Destination Y Offset (m)  
Double-precision floating point  
Specifies the longitude of the destination endpoint of the LOS test segment or specifies the Y offset of the destination endpoint

`cigi.los_segment_request.entity_id` Entity ID  
Unsigned 16-bit integer  
Specifies the entity relative to which the test segment endpoints are defined

`cigi.los_segment_request.los_id` LOS ID  
Unsigned 16-bit integer  
Identifies the LOS request

`cigi.los_segment_request.material_mask` Material Mask  
Unsigned 32-bit integer  
Specifies the environmental and cultural features to be included in or excluded from the test

`cigi.los_segment_request.response_coord` Response Coordinate System  
Boolean  
Specifies the coordinate system to be used in the response

`cigi.los_segment_request.source_alt_zoff` Source Altitude (m)/Source Z Offset (m)  
Double-precision floating point  
Specifies the altitude of the source endpoint of the LOS test segment or specifies the Z offset of the source endpoint

`cigi.los_segment_request.source_coord` Source Point Coordinate System  
Boolean  
Indicates the coordinate system relative to which the test segment source endpoints are defined

`cigi.los_segment_request.source_lat_xoff` Source Latitude (degrees)/Source X Offset (m)  
Double-precision floating point  
Specifies the latitude of the source endpoint of the LOS test segment or specifies the X offset of the source endpoint

`cigi.los_segment_request.source_lon_yoff` Source Longitude (degrees)/Source Y Offset (m)  
Double-precision floating point  
Specifies the longitude of the source endpoint of the LOS test segment or specifies the Y offset of the source endpoint

`cigi.los_segment_request.type` Request Type  
Boolean  
Determines what type of response the IG should return for this request

`cigi.los_segment_request.update_period` Update Period  
Unsigned 8-bit integer  
Specifies interval between successive responses to this request. A zero indicates that the IG should respond immediately

`cigi.los_vector_request` Line of Sight Vector Request  
String  
Line of Sight Vector Request Packet

`cigi.los_vector_request.alpha` Alpha Threshold  
Unsigned 8-bit integer  
Specifies the minimum alpha value a surface may have for an LOS response to be returned

`cigi.los_vector_request.azimuth` Azimuth (degrees)  
Specifies the horizontal angle of the LOS test vector

`cigi.los_vector_request.elevation` Elevation (degrees)  
Specifies the vertical angle of the LOS test vector

`cigi.los_vector_request.entity_id` Entity ID  
Unsigned 16-bit integer  
Specifies the entity relative to which the test segment endpoints are defined

`cigi.los_vector_request.los_id` LOS ID  
Unsigned 16-bit integer  
Identifies the LOS request

`cigi.los_vector_request.material_mask` Material Mask  
Unsigned 32-bit integer  
Specifies the environmental and cultural features to be included in LOS segments

`cigi.los_vector_request.max_range` Maximum Range (m)  
Specifies the maximum range along the LOS test vector at which intersection

`cigi.los_vector_request.min_range` Minimum Range (m)  
Specifies the minimum range along the LOS test vector at which intersection

`cigi.los_vector_request.response_coord` Response Coordinate System  
Boolean  
Specifies the coordinate system to be used in the response

`cigi.los_vector_request.source_alt_zoff` Source Altitude (m)/Source Z Offset (m)  
Double-precision floating point  
Specifies the altitude of the source point of the LOS test vector or specifies

`cigi.los_vector_request.source_coord` Source Point Coordinate System  
Boolean  
Indicates the coordinate system relative to which the test vector source point

`cigi.los_vector_request.source_lat_xoff` Source Latitude (degrees)/Source X Offset  
Double-precision floating point  
Specifies the latitude of the source point of the LOS test vector

`cigi.los_vector_request.source_lon_yoff` Source Longitude (degrees)/Source Y Offset  
Double-precision floating point  
Specifies the longitude of the source point of the LOS test vector

`cigi.los_vector_request.type` Request Type  
Boolean  
Determines what type of response the IG should return for this request

`cigi.los_vector_request.update_period` Update Period  
Unsigned 8-bit integer  
Specifies interval between successive responses to this request. A zero indicates

`cigi.maritime_surface_conditions_control` Maritime Surface Conditions Control  
String  
Maritime Surface Conditions Control Packet

`cigi.maritime_surface_conditions_control.entity_region_id` Entity ID/Region ID  
Unsigned 16-bit integer  
Specifies the entity to which the surface attributes in this packet are applied

`cigi.maritime_surface_conditions_control.scope` Scope  
Unsigned 8-bit integer  
Specifies whether this packet is applied globally, applied to region, or applied to asset

`cigi.maritime_surface_conditions_control.sea_surface_height` Sea Surface Height

Specifies the height of the water above MSL at equilibrium

cigi.maritime\_surface\_conditions\_control.surface\_clarity Surface Clarity (%)  
Specifies the clarity of the water at its surface

cigi.maritime\_surface\_conditions\_control.surface\_conditions\_enable Surface Cond  
Boolean  
Determines the state of the specified surface conditions

cigi.maritime\_surface\_conditions\_control.surface\_water\_temp Surface Water Tempe  
Specifies the water temperature at the surface

cigi.maritime\_surface\_conditions\_control.whitecap\_enable Whitecap Enable  
Boolean  
Determines whether whitecaps are enabled

cigi.maritime\_surface\_conditions\_response Maritime Surface Conditions Response  
String  
Maritime Surface Conditions Response Packet

cigi.maritime\_surface\_conditions\_response.request\_id Request ID  
Unsigned 8-bit integer  
Identifies the environmental conditions request to which this response packe

cigi.maritime\_surface\_conditions\_response.sea\_surface\_height Sea Surface Height  
Indicates the height of the sea surface at equilibrium

cigi.maritime\_surface\_conditions\_response.surface\_clarity Surface Clarity (%)  
Indicates the clarity of the water at its surface

cigi.maritime\_surface\_conditions\_response.surface\_water\_temp Surface Water Temp  
Indicates the water temperature at the sea surface

cigi.motion\_tracker\_control Motion Tracker Control  
String  
Motion Tracker Control Packet

cigi.motion\_tracker\_control.boresight\_enable Boresight Enable  
Boolean  
Sets the boresight state of the external tracking device

cigi.motion\_tracker\_control.pitch\_enable Pitch Enable  
Boolean  
Used to enable or disable the pitch of the motion tracker

cigi.motion\_tracker\_control.roll\_enable Roll Enable  
Boolean  
Used to enable or disable the roll of the motion tracker

cigi.motion\_tracker\_control.tracker\_enable Tracker Enable  
Boolean  
Specifies whether the tracking device is enabled

cigi.motion\_tracker\_control.tracker\_id Tracker ID  
Unsigned 8-bit integer  
Specifies the tracker whose state the data in this packet represents

cigi.motion\_tracker\_control.view\_group\_id View/View Group ID  
Unsigned 16-bit integer  
Specifies the view or view group to which the tracking device is attached

`cigi.motion_tracker_control.view_group_select` View/View Group Select  
Boolean  
Specifies whether the tracking device is attached to a single view or a view group

`cigi.motion_tracker_control.x_enable` X Enable  
Boolean  
Used to enable or disable the X-axis position of the motion tracker

`cigi.motion_tracker_control.y_enable` Y Enable  
Boolean  
Used to enable or disable the Y-axis position of the motion tracker

`cigi.motion_tracker_control.yaw_enable` Yaw Enable  
Boolean  
Used to enable or disable the yaw of the motion tracker

`cigi.motion_tracker_control.z_enable` Z Enable  
Boolean  
Used to enable or disable the Z-axis position of the motion tracker

`cigi.packet_id` Packet ID  
Unsigned 8-bit integer  
Identifies the packet's id

`cigi.packet_size` Packet Size (bytes)  
Unsigned 8-bit integer  
Identifies the number of bytes in this type of packet

`cigi.port` Source or Destination Port  
Unsigned 16-bit integer  
Source or Destination Port

`cigi.pos_request` Position Request  
String  
Position Request Packet

`cigi.pos_request.coord_system` Coordinate System  
Unsigned 8-bit integer  
Specifies the desired coordinate system relative to which the position and orientation is being requested

`cigi.pos_request.object_class` Object Class  
Unsigned 8-bit integer  
Specifies the type of object whose position is being requested

`cigi.pos_request.object_id` Object ID  
Unsigned 16-bit integer  
Identifies the entity, view, view group, or motion tracking device whose position is being requested

`cigi.pos_request.part_id` Articulated Part ID  
Unsigned 8-bit integer  
Identifies the articulated part whose position is being requested

`cigi.pos_request.update_mode` Update Mode  
Boolean  
Specifies whether the IG should report the position of the requested object

`cigi.pos_response` Position Response  
String  
Position Response Packet

`cigi.pos_response.alt_zoff` Altitude (m)/Z Offset (m)  
Double-precision floating point  
Indicates the geodetic altitude of the entity, articulated part, view, or view group

`cigi.pos_response.coord_system` Coordinate System  
 Unsigned 8-bit integer  
 Indicates the coordinate system in which the position and orientation are sp

`cigi.pos_response.lat_xoff` Latitude (degrees)/X Offset (m)  
 Double-precision floating point  
 Indicates the geodetic latitude of the entity, articulated part, view, or vi

`cigi.pos_response.lon_yoff` Longitude (degrees)/Y Offset (m)  
 Double-precision floating point  
 Indicates the geodetic longitude of the entity, articulated part, view, or v

`cigi.pos_response.object_class` Object Class  
 Unsigned 8-bit integer  
 Indicates the type of object whose position is being reported

`cigi.pos_response.object_id` Object ID  
 Unsigned 16-bit integer  
 Identifies the entity, view, view group, or motion tracking device whose pos

`cigi.pos_response.part_id` Articulated Part ID  
 Unsigned 8-bit integer  
 Identifies the articulated part whose position is being reported

`cigi.pos_response.pitch` Pitch (degrees)  
 Indicates the pitch angle of the specified entity, articulated part, view, o

`cigi.pos_response.roll` Roll (degrees)  
 Indicates the roll angle of the specified entity, articulated part, view, or

`cigi.pos_response.yaw` Yaw (degrees)  
 Indicates the yaw angle of the specified entity, articulated part, view, or

`cigi.rate_control` Rate Control  
 String  
 Rate Control Packet

`cigi.rate_control.apply_to_part` Apply to Articulated Part  
 Boolean  
 Determines whether the rate is applied to the articulated part specified by

`cigi.rate_control.coordinate_system` Coordinate System  
 Boolean  
 Specifies the reference coordinate system to which the linear and angular ra

`cigi.rate_control.entity_id` Entity ID  
 Unsigned 16-bit integer  
 Specifies the entity to which this data packet will be applied

`cigi.rate_control.part_id` Articulated Part ID  
 Signed 8-bit integer  
 Identifies which articulated part is controlled with this data packet

`cigi.rate_control.pitch_rate` Pitch Angular Rate (degrees/s)  
 Specifies the pitch angular rate for the entity being represented

`cigi.rate_control.roll_rate` Roll Angular Rate (degrees/s)  
 Specifies the roll angular rate for the entity being represented

`cigi.rate_control.x_rate` X Linear Rate (m/s)  
 Specifies the x component of the velocity vector for the entity being repres

cigi.rate\_control.y\_rate Y Linear Rate (m/s)

Specifies the y component of the velocity vector for the entity being represented

cigi.rate\_control.yaw\_rate Yaw Angular Rate (degrees/s)

Specifies the yaw angular rate for the entity being represented

cigi.rate\_control.z\_rate Z Linear Rate (m/s)

Specifies the z component of the velocity vector for the entity being represented

cigi.sensor\_control Sensor Control

String

Sensor Control Packet

cigi.sensor\_control.ac\_coupling AC Coupling

Indicates the AC Coupling decay rate for the weapon sensor option

cigi.sensor\_control.auto\_gain Automatic Gain

Boolean

When set to "on," cause the weapons sensor to automatically adjust the gain

cigi.sensor\_control.gain Gain

Indicates the gain value for the weapon sensor option

cigi.sensor\_control.level Level

Indicates the level value for the weapon sensor option

cigi.sensor\_control.line\_dropout Line-by-Line Dropout

Boolean

Indicates whether the line-by-line dropout feature is enabled

cigi.sensor\_control.line\_dropout\_enable Line-by-Line Dropout Enable

Boolean

Specifies whether line-by-line dropout is enabled

cigi.sensor\_control.noise Noise

Indicates the detector-noise gain for the weapon sensor option

cigi.sensor\_control.polarity Polarity

Boolean

Indicates whether this sensor is showing white hot or black hot

cigi.sensor\_control.response\_type Response Type

Boolean

Specifies whether the IG should return a Sensor Response packet or a Sensor

cigi.sensor\_control.sensor\_enable Sensor On/Off

Boolean

Indicates whether the sensor is turned on or off

cigi.sensor\_control.sensor\_id Sensor ID

Unsigned 8-bit integer

Identifies the sensor to which this packet should be applied

cigi.sensor\_control.sensor\_on\_off Sensor On/Off

Boolean

Specifies whether the sensor is turned on or off

cigi.sensor\_control.track\_mode Track Mode

Unsigned 8-bit integer

Indicates which track mode the sensor should be

`cigi.sensor_control.track_polarity` Track White/Black  
Boolean  
Identifies whether the weapons sensor will track wither white or black

`cigi.sensor_control.track_white_black` Track White/Black  
Boolean  
Specifies whether the sensor tracks white or black

`cigi.sensor_control.view_id` View ID  
Unsigned 8-bit integer  
Dictates to which view the corresponding sensor is assigned, regardless of t

`cigi.sensor_ext_response` Sensor Extended Response  
String  
Sensor Extended Response Packet

`cigi.sensor_ext_response.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates the entity ID of the target

`cigi.sensor_ext_response.entity_id_valid` Entity ID Valid  
Boolean  
Indicates whether the target is an entity or a non-entity object

`cigi.sensor_ext_response.frame_ctr` Frame Counter  
Unsigned 32-bit integer  
Indicates the IG's frame counter at the time that the IG calculates the gate

`cigi.sensor_ext_response.gate_x_pos` Gate X Position (degrees)  
Specifies the gate symbol's position along the view's X axis

`cigi.sensor_ext_response.gate_x_size` Gate X Size (pixels or raster lines)  
Unsigned 16-bit integer  
Specifies the gate symbol size along the view's X axis

`cigi.sensor_ext_response.gate_y_pos` Gate Y Position (degrees)  
Specifies the gate symbol's position along the view's Y axis

`cigi.sensor_ext_response.gate_y_size` Gate Y Size (pixels or raster lines)  
Unsigned 16-bit integer  
Specifies the gate symbol size along the view's Y axis

`cigi.sensor_ext_response.sensor_id` Sensor ID  
Unsigned 8-bit integer  
Specifies the sensor to which the data in this packet apply

`cigi.sensor_ext_response.sensor_status` Sensor Status  
Unsigned 8-bit integer  
Indicates the current tracking state of the sensor

`cigi.sensor_ext_response.track_alt` Track Point Altitude (m)  
Double-precision floating point  
Indicates the geodetic altitude of the point being tracked by the sensor

`cigi.sensor_ext_response.track_lat` Track Point Latitude (degrees)  
Double-precision floating point  
Indicates the geodetic latitude of the point being tracked by the sensor

`cigi.sensor_ext_response.track_lon` Track Point Longitude (degrees)  
Double-precision floating point  
Indicates the geodetic longitude of the point being tracked by the sensor

`cigi.sensor_ext_response.view_id` View ID  
Unsigned 16-bit integer  
Specifies the view that represents the sensor display

`cigi.sensor_response` Sensor Response  
String  
Sensor Response Packet

`cigi.sensor_response.frame_ctr` Frame Counter  
Unsigned 32-bit integer  
Indicates the IG's frame counter at the time that the IG calculates the gate

`cigi.sensor_response.gate_x_pos` Gate X Position (degrees)  
Specifies the gate symbol's position along the view's X axis

`cigi.sensor_response.gate_x_size` Gate X Size (pixels or raster lines)  
Unsigned 16-bit integer  
Specifies the gate symbol size along the view's X axis

`cigi.sensor_response.gate_y_pos` Gate Y Position (degrees)  
Specifies the gate symbol's position along the view's Y axis

`cigi.sensor_response.gate_y_size` Gate Y Size (pixels or raster lines)  
Unsigned 16-bit integer  
Specifies the gate symbol size along the view's Y axis

`cigi.sensor_response.sensor_id` Sensor ID  
Unsigned 8-bit integer  
Identifies the sensor response corresponding to the associated sensor control

`cigi.sensor_response.sensor_status` Sensor Status  
Unsigned 8-bit integer  
Indicates the current tracking state of the sensor

`cigi.sensor_response.status` Sensor Status  
Unsigned 8-bit integer  
Indicates the current sensor mode

`cigi.sensor_response.view_id` View ID  
Unsigned 8-bit integer  
Indicates the sensor view

`cigi.sensor_response.x_offset` Gate X Offset (degrees)  
Unsigned 16-bit integer  
Specifies the target's horizontal offset from the view plane normal

`cigi.sensor_response.x_size` Gate X Size  
Unsigned 16-bit integer  
Specifies the target size in the X direction (horizontal) in pixels

`cigi.sensor_response.y_offset` Gate Y Offset (degrees)  
Unsigned 16-bit integer  
Specifies the target's vertical offset from the view plane normal

`cigi.sensor_response.y_size` Gate Y Size  
Unsigned 16-bit integer  
Specifies the target size in the Y direction (vertical) in pixels

`cigi.short_art_part_control` Short Articulated Part Control  
String  
Short Articulated Part Control Packet

`cigi.short_art_part_control.dof_1` DOF 1  
Specifies either an offset or an angular position for the part identified by

`cigi.short_art_part_control.dof_2` DOF 2  
Specifies either an offset or an angular position for the part identified by

`cigi.short_art_part_control.dof_select_1` DOF Select 1  
Unsigned 8-bit integer  
Specifies the degree of freedom to which the value of DOF 1 is applied

`cigi.short_art_part_control.dof_select_2` DOF Select 2  
Unsigned 8-bit integer  
Specifies the degree of freedom to which the value of DOF 2 is applied

`cigi.short_art_part_control.entity_id` Entity ID  
Unsigned 16-bit integer  
Specifies the entity to which the articulated part(s) belongs

`cigi.short_art_part_control.part_enable_1` Articulated Part Enable 1  
Boolean  
Determines whether the articulated part submodel specified by Articulated Pa

`cigi.short_art_part_control.part_enable_2` Articulated Part Enable 2  
Boolean  
Determines whether the articulated part submodel specified by Articulated Pa

`cigi.short_art_part_control.part_id_1` Articulated Part ID 1  
Unsigned 8-bit integer  
Specifies an articulated part to which the data in this packet should be app

`cigi.short_art_part_control.part_id_2` Articulated Part ID 2  
Unsigned 8-bit integer  
Specifies an articulated part to which the data in this packet should be app

`cigi.short_component_control` Short Component Control  
String  
Short Component Control Packet

`cigi.short_component_control.component_class` Component Class  
Unsigned 8-bit integer  
Identifies the type of object to which the Instance ID parameter refers

`cigi.short_component_control.component_id` Component ID  
Unsigned 16-bit integer  
Identifies the component to which the data in this packet should be applied

`cigi.short_component_control.component_state` Component State  
Unsigned 8-bit integer  
Specifies a discrete state for the component

`cigi.short_component_control.data_1` Component Data 1  
Byte array  
User-defined component data

`cigi.short_component_control.data_2` Component Data 2  
Byte array  
User-defined component data

`cigi.short_component_control.instance_id` Instance ID  
Unsigned 16-bit integer  
Identifies the object to which the component belongs

cigi.sof Start of Frame  
String  
Start of Frame Packet

cigi.sof.db\_number Database Number  
Signed 8-bit integer  
Indicates load status of the requested database

cigi.sof.earth\_reference\_model Earth Reference Model  
Boolean  
Indicates whether the IG is using a custom Earth Reference Model or the default

cigi.sof.frame\_ctr IG to Host Frame Counter  
Unsigned 32-bit integer  
Contains a number representing a particular frame

cigi.sof.ig\_frame\_number IG Frame Number  
Unsigned 32-bit integer  
Uniquely identifies the IG data frame

cigi.sof.ig\_mode IG Mode  
Unsigned 8-bit integer  
Identifies to the host the current operating mode of the IG

cigi.sof.ig\_status IG Status Code  
Unsigned 8-bit integer  
Indicates the error status of the IG

cigi.sof.ig\_status\_code IG Status Code  
Unsigned 8-bit integer  
Indicates the operational status of the IG

cigi.sof.last\_host\_frame\_number Last Host Frame Number  
Unsigned 32-bit integer  
Contains the value of the Host Frame parameter in the last IG Control packet

cigi.sof.time\_tag Timing Value (microseconds)  
Contains a timing value that is used to time-tag the ethernet message during

cigi.sof.timestamp Timestamp (microseconds)  
Unsigned 32-bit integer  
Indicates the number of 10 microsecond "ticks" since some initial reference

cigi.sof.timestamp\_valid Timestamp Valid  
Boolean  
Indicates whether the Timestamp parameter contains a valid value

cigi.special\_effect\_def Special Effect Definition  
String  
Special Effect Definition Packet

cigi.special\_effect\_def.blue Blue Color Value  
Unsigned 8-bit integer  
Specifies the blue component of a color to be applied to the effect

cigi.special\_effect\_def.burst\_interval Burst Interval (s)  
Indicates the time between successive bursts

cigi.special\_effect\_def.color\_enable Color Enable  
Boolean  
Indicates whether the red, green, and blue color values will be applied to t

`cigi.special_effect_def.duration` Duration (s)  
Indicates how long an effect or sequence of burst will be active

`cigi.special_effect_def.effect_count` Effect Count  
Unsigned 16-bit integer  
Indicates how many effects are contained within a single burst

`cigi.special_effect_def.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates which effect is being modified

`cigi.special_effect_def.green` Green Color Value  
Unsigned 8-bit integer  
Specifies the green component of a color to be applied to the effect

`cigi.special_effect_def.red` Red Color Value  
Unsigned 8-bit integer  
Specifies the red component of a color to be applied to the effect

`cigi.special_effect_def.separation` Separation (m)  
Indicates the distance between particles within a burst

`cigi.special_effect_def.seq_direction` Sequence Direction  
Boolean  
Indicates whether the effect animation sequence should be sequence from beginning

`cigi.special_effect_def.time_scale` Time Scale  
Specifies a scale factor to apply to the time period for the effect's animation

`cigi.special_effect_def.x_scale` X Scale  
Specifies a scale factor to apply along the effect's X axis

`cigi.special_effect_def.y_scale` Y Scale  
Specifies a scale factor to apply along the effect's Y axis

`cigi.special_effect_def.z_scale` Z Scale  
Specifies a scale factor to apply along the effect's Z axis

`cigi.srcport` Source Port  
Unsigned 16-bit integer  
Source Port

`cigi.terr_surface_cond_response` Terrestrial Surface Conditions Response  
String  
Terrestrial Surface Conditions Response Packet

`cigi.terr_surface_cond_response.request_id` Request ID  
Unsigned 8-bit integer  
Identifies the environmental conditions request to which this response packet

`cigi.terr_surface_cond_response.surface_id` Surface Condition ID  
Unsigned 32-bit integer  
Indicates the presence of a specific surface condition or contaminant at the

`cigi.terrestrial_surface_conditions_control` Terrestrial Surface Conditions Control  
String  
Terrestrial Surface Conditions Control Packet

`cigi.terrestrial_surface_conditions_control.coverage` Coverage (%)  
Unsigned 8-bit integer  
Determines the degree of coverage of the specified surface contaminant

```

cigi.terrestrial_surface_conditions_control.entity_region_id  Entity ID/Region ID
    Unsigned 16-bit integer
    Specifies the environmental entity to which the surface condition attributes

cigi.terrestrial_surface_conditions_control.scope  Scope
    Unsigned 8-bit integer
    Determines whether the specified surface conditions are applied globally, re

cigi.terrestrial_surface_conditions_control.severity  Severity
    Unsigned 8-bit integer
    Determines the degree of severity for the specified surface contaminant(s)

cigi.terrestrial_surface_conditions_control.surface_condition_enable  Surface Co
    Boolean
    Specifies whether the surface condition attribute identified by the Surface

cigi.terrestrial_surface_conditions_control.surface_condition_id  Surface Condit
    Unsigned 16-bit integer
    Identifies a surface condition or contaminant

cigi.trajectory_def  Trajectory Definition
    String
    Trajectory Definition Packet

cigi.trajectory_def.acceleration  Acceleration Factor (m/s^2)
    Indicates the acceleration factor that will be applied to the Vz component o

cigi.trajectory_def.acceleration_x  Acceleration X (m/s^2)
    Specifies the X component of the acceleration vector

cigi.trajectory_def.acceleration_y  Acceleration Y (m/s^2)
    Specifies the Y component of the acceleration vector

cigi.trajectory_def.acceleration_z  Acceleration Z (m/s^2)
    Specifies the Z component of the acceleration vector

cigi.trajectory_def.entity_id  Entity ID
    Unsigned 16-bit integer
    Indicates which entity is being influenced by this trajectory behavior

cigi.trajectory_def.retardation  Retardation Rate (m/s)
    Indicates what retardation factor will be applied to the object's motion

cigi.trajectory_def.retardation_rate  Retardation Rate (m/s^2)
    Specifies the magnitude of an acceleration applied against the entity's inst

cigi.trajectory_def.terminal_velocity  Terminal Velocity (m/s)
    Indicates what final velocity the object will be allowed to obtain

cigi.unknown  Unknown
    String
    Unknown Packet

cigi.user_definable  User Definable
    String
    User definable packet

cigi.user_defined  User-Defined
    String
    User-Defined Packet

```

`cigi.version` CIGI Version  
Unsigned 8-bit integer  
Identifies the version of CIGI interface that is currently running on the host

`cigi.view_control` View Control  
String  
View Control Packet

`cigi.view_control.entity_id` Entity ID  
Unsigned 16-bit integer  
Indicates the entity to which this view should be attached

`cigi.view_control.group_id` Group ID  
Unsigned 8-bit integer  
Specifies the view group to which the contents of this packet are applied

`cigi.view_control.pitch` Pitch (degrees)  
The rotation about the view's Y axis

`cigi.view_control.pitch_enable` Pitch Enable  
Unsigned 8-bit integer  
Identifies whether the pitch parameter should be applied to the specified view

`cigi.view_control.roll` Roll (degrees)  
The rotation about the view's X axis

`cigi.view_control.roll_enable` Roll Enable  
Unsigned 8-bit integer  
Identifies whether the roll parameter should be applied to the specified view

`cigi.view_control.view_group` View Group Select  
Unsigned 8-bit integer  
Specifies which view group is to be controlled by the offsets

`cigi.view_control.view_id` View ID  
Unsigned 8-bit integer  
Specifies which view position is associated with offsets and rotation specifications

`cigi.view_control.x_offset` X Offset (m)  
Defines the X component of the view offset vector along the entity's longitudinal axis

`cigi.view_control.xoff` X Offset (m)  
Specifies the position of the view eyepoint along the X axis of the entity's longitudinal axis

`cigi.view_control.xoff_enable` X Offset Enable  
Boolean  
Identifies whether the x offset parameter should be applied to the specified view

`cigi.view_control.y_offset` Y Offset  
Defines the Y component of the view offset vector along the entity's lateral axis

`cigi.view_control.yaw` Yaw (degrees)  
The rotation about the view's Z axis

`cigi.view_control.yaw_enable` Yaw Enable  
Unsigned 8-bit integer  
Identifies whether the yaw parameter should be applied to the specified view

`cigi.view_control.yoff` Y Offset (m)  
Specifies the position of the view eyepoint along the Y axis of the entity's lateral axis

`cigi.view_control.yoff_enable` Y Offset Enable  
Unsigned 8-bit integer  
Identifies whether the y offset parameter should be applied to the specified

`cigi.view_control.z_offset` Z Offset  
Defines the Z component of the view offset vector along the entity's vertical

`cigi.view_control.zoff` Z Offset (m)  
Specifies the position of the view eyepoint along the Z axis of the entity s

`cigi.view_control.zoff_enable` Z Offset Enable  
Unsigned 8-bit integer  
Identifies whether the z offset parameter should be applied to the specified

`cigi.view_def` View Definition  
String  
View Definition Packet

`cigi.view_def.bottom` Bottom (degrees)  
Specifies the bottom half-angle of the view frustum

`cigi.view_def.bottom_enable` Field of View Bottom Enable  
Boolean  
Identifies whether the field of view bottom value is manipulated from the Ho

`cigi.view_def.far` Far (m)  
Specifies the position of the view's far clipping plane

`cigi.view_def.far_enable` Field of View Far Enable  
Boolean  
Identifies whether the field of view far value is manipulated from the Host

`cigi.view_def.fov_bottom` Field of View Bottom (degrees)  
Defines the bottom clipping plane for the view

`cigi.view_def.fov_far` Field of View Far (m)  
Defines the far clipping plane for the view

`cigi.view_def.fov_left` Field of View Left (degrees)  
Defines the left clipping plane for the view

`cigi.view_def.fov_near` Field of View Near (m)  
Defines the near clipping plane for the view

`cigi.view_def.fov_right` Field of View Right (degrees)  
Defines the right clipping plane for the view

`cigi.view_def.fov_top` Field of View Top (degrees)  
Defines the top clipping plane for the view

`cigi.view_def.group_id` Group ID  
Unsigned 8-bit integer  
Specifies the group to which the view is to be assigned

`cigi.view_def.left` Left (degrees)  
Specifies the left half-angle of the view frustum

`cigi.view_def.left_enable` Field of View Left Enable  
Boolean  
Identifies whether the field of view left value is manipulated from the Host

`cigi.view_def.mirror` View Mirror  
Unsigned 8-bit integer  
Specifies what mirroring function should be applied to the view

`cigi.view_def.mirror_mode` Mirror Mode  
Unsigned 8-bit integer  
Specifies the mirroring function to be performed on the view

`cigi.view_def.near` Near (m)  
Specifies the position of the view's near clipping plane

`cigi.view_def.near_enable` Field of View Near Enable  
Boolean  
Identifies whether the field of view near value is manipulated from the Host

`cigi.view_def.pixel_rep` Pixel Replication  
Unsigned 8-bit integer  
Specifies what pixel replication function should be applied to the view

`cigi.view_def.pixel_replication` Pixel Replication Mode  
Unsigned 8-bit integer  
Specifies the pixel replication function to be performed on the view

`cigi.view_def.projection_type` Projection Type  
Boolean  
Specifies whether the view projection should be perspective or orthographic

`cigi.view_def.reorder` Reorder  
Boolean  
Specifies whether the view should be moved to the top of any overlapping view

`cigi.view_def.right` Right (degrees)  
Specifies the right half-angle of the view frustum

`cigi.view_def.right_enable` Field of View Right Enable  
Boolean  
Identifies whether the field of view right value is manipulated from the Host

`cigi.view_def.top` Top (degrees)  
Specifies the top half-angle of the view frustum

`cigi.view_def.top_enable` Field of View Top Enable  
Boolean  
Identifies whether the field of view top value is manipulated from the Host

`cigi.view_def.tracker_assign` Tracker Assign  
Boolean  
Specifies whether the view should be controlled by an external tracking device

`cigi.view_def.view_group` View Group  
Unsigned 8-bit integer  
Specifies the view group to which the view is to be assigned

`cigi.view_def.view_id` View ID  
Unsigned 8-bit integer  
Specifies the view to which this packet should be applied

`cigi.view_def.view_type` View Type  
Unsigned 8-bit integer  
Specifies the view type

`cigi.wave_control` Wave Control  
String  
Wave Control Packet

`cigi.wave_control.breaker_type` Breaker Type  
Unsigned 8-bit integer  
Specifies the type of breaker within the surf zone

`cigi.wave_control.direction` Direction (degrees)  
Specifies the direction in which the wave propagates

`cigi.wave_control.entity_region_id` Entity ID/Region ID  
Unsigned 16-bit integer  
Specifies the surface entity for which the wave is defined or specifies the

`cigi.wave_control.height` Wave Height (m)  
Specifies the average vertical distance from trough to crest produced by the

`cigi.wave_control.leading` Leading (degrees)  
Specifies the phase angle at which the crest occurs

`cigi.wave_control.period` Period (s)  
Specifies the time required fro one complete oscillation of the wave

`cigi.wave_control.phase_offset` Phase Offset (degrees)  
Specifies a phase offset for the wave

`cigi.wave_control.scope` Scope  
Unsigned 8-bit integer  
Specifies whether the wave is defined for global, regional, or entity-control

`cigi.wave_control.wave_enable` Wave Enable  
Boolean  
Determines whether the wave is enabled or disabled

`cigi.wave_control.wave_id` Wave ID  
Unsigned 8-bit integer  
Specifies the wave to which the attributes in this packet are applied

`cigi.wave_control.wavelength` Wavelength (m)  
Specifies the distance from a particular phase on a wave to the same phase o

`cigi.wea_cond_response` Weather Conditions Response  
String  
Weather Conditions Response Packet

`cigi.wea_cond_response.air_temp` Air Temperature (degrees C)  
Indicates the air temperature at the requested location

`cigi.wea_cond_response.barometric_pressure` Barometric Pressure (mb or hPa)  
Indicates the atmospheric pressure at the requested location

`cigi.wea_cond_response.horiz_speed` Horizontal Wind Speed (m/s)  
Indicates the local wind speed parallel to the ellipsoid-tangential referenc

`cigi.wea_cond_response.humidity` Humidity (%)  
Unsigned 8-bit integer  
Indicates the humidity at the request location

`cigi.wea_cond_response.request_id` Request ID  
Unsigned 8-bit integer  
Identifies the environmental conditions request to which this response packet

`cigi.wea_cond_response.vert_speed` Vertical Wind Speed (m/s)  
Indicates the local vertical wind speed

`cigi.wea_cond_response.visibility_range` Visibility Range (m)  
Indicates the visibility range at the requested location

`cigi.wea_cond_response.wind_direction` Wind Direction (degrees)  
Indicates the local wind direction

`cigi.weather_control` Weather Control  
String  
Weather Control Packet

`cigi.weather_control.aerosol_concentration` Aerosol Concentration (g/m<sup>3</sup>)  
Specifies the concentration of water, smoke, dust, or other particles suspended in the air

`cigi.weather_control.air_temp` Air Temperature (degrees C)  
Identifies the local temperature inside the weather phenomenon

`cigi.weather_control.barometric_pressure` Barometric Pressure (mb or hPa)  
Specifies the atmospheric pressure within the weather layer

`cigi.weather_control.base_elevation` Base Elevation (m)  
Specifies the altitude of the base of the weather layer

`cigi.weather_control.cloud_type` Cloud Type  
Unsigned 8-bit integer  
Specifies the type of clouds contained within the weather layer

`cigi.weather_control.coverage` Coverage (%)  
Indicates the amount of area coverage a particular phenomenon has over the surface

`cigi.weather_control.elevation` Elevation (m)  
Indicates the base altitude of the weather phenomenon

`cigi.weather_control.entity_id` Entity ID  
Unsigned 16-bit integer  
Identifies the entity's ID

`cigi.weather_control.entity_region_id` Entity ID/Region ID  
Unsigned 16-bit integer  
Specifies the entity to which the weather attributes in this packet are applied

`cigi.weather_control.horiz_wind` Horizontal Wind Speed (m/s)  
Specifies the local wind speed parallel to the ellipsoid-tangential reference plane

`cigi.weather_control.humidity` Humidity (%)  
Unsigned 8-bit integer  
Specifies the humidity within the weather layer

`cigi.weather_control.layer_id` Layer ID  
Unsigned 8-bit integer  
Specifies the weather layer to which the data in this packet are applied

`cigi.weather_control.opacity` Opacity (%)  
Identifies the opacity of the weather phenomenon

`cigi.weather_control.phenomenon_type` Phenomenon Type  
Unsigned 16-bit integer  
Identifies the type of weather described by this data packet

`cigi.weather_control.random_lightning_enable` Random Lightning Enable  
Unsigned 8-bit integer  
Specifies whether the weather layer exhibits random lightning effects

`cigi.weather_control.random_winds` Random Winds Aloft  
Boolean  
Indicates whether a random frequency and duration should be applied to the w

`cigi.weather_control.random_winds_enable` Random Winds Enable  
Boolean  
Specifies whether a random frequency and duration should be applied to the l

`cigi.weather_control.scope` Scope  
Unsigned 8-bit integer  
Specifies whether the weather is global, regional, or assigned to an entity

`cigi.weather_control.scud_enable` Scud Enable  
Boolean  
Indicates whether there will be scud effects applied to the phenomenon speci

`cigi.weather_control.scud_frequency` Scud Frequency (%)  
Identifies the frequency for the scud effect

`cigi.weather_control.severity` Severity  
Unsigned 8-bit integer  
Indicates the severity of the weather phenomenon

`cigi.weather_control.thickness` Thickness (m)  
Indicates the vertical thickness of the weather phenomenon

`cigi.weather_control.transition_band` Transition Band (m)  
Indicates a vertical transition band both above and below a phenomenon

`cigi.weather_control.vert_wind` Vertical Wind Speed (m/s)  
Specifies the local vertical wind speed

`cigi.weather_control.visibility_range` Visibility Range (m)  
Specifies the visibility range through the weather layer

`cigi.weather_control.weather_enable` Weather Enable  
Boolean  
Indicates whether the phenomena specified by this data packet is visible

`cigi.weather_control.wind_direction` Winds Aloft Direction (degrees)  
Indicates local direction of the wind applied to the phenomenon

`cigi.weather_control.wind_speed` Winds Aloft Speed  
Identifies the local wind speed applied to the phenomenon

**Common Industrial Protocol (cip)**

```

cip.attribute  Attribute
  Unsigned 8-bit integer
  Attribute

cip.class      Class
  Unsigned 8-bit integer
  Class

    PacketCable Multimedia Committed Envelope Maximum Sustained Traffic Rate

cops.pc_mm_mtb  Maximum Traffic Burst
    Unsigned 32-bit integer
    PacketCable Multimedia Committed Envelope Maximum Traffic Burst

cops.pc_mm_ngi  Nominal Grant Interval
    Unsigned 32-bit integer
    PacketCable Multimedia Nominal Grant Interval

cops.pc_mm_npi  Nominal Polling Interval
    Unsigned 32-bit integer
    PacketCable Multimedia Nominal Polling Interval

cops.pc_mm_psid  PSID
    Unsigned 32-bit integer
    PacketCable Multimedia PSID

cops.pc_mm_rtp  Request Transmission Policy
    Unsigned 32-bit integer
    PacketCable Multimedia Committed Envelope Traffic Priority

cops.pc_mm_synch_options_report_type  Report Type
    Unsigned 8-bit integer
    PacketCable Multimedia Synch Options Report Type

cops.pc_mm_synch_options_synch_type  Synch Type
    Unsigned 8-bit integer
    PacketCable Multimedia Synch Options Synch Type

cops.pc_mm_tbul_ul  Usage Limit
    Unsigned 32-bit integer
    PacketCable Multimedia Time-Based Usage Limit

cops.pc_mm_tgj  Tolerated Grant Jitter
    Unsigned 32-bit integer
    PacketCable Multimedia Tolerated Grant Jitter

cops.pc_mm_tp  Traffic Priority
    Unsigned 8-bit integer
    PacketCable Multimedia Committed Envelope Traffic Priority

cops.pc_mm_tpj  Tolerated Poll Jitter
    Unsigned 32-bit integer
    PacketCable Multimedia Tolerated Poll Jitter

cops.pc_mm_ugs  Unsolicited Grant Size
    Unsigned 16-bit integer
    PacketCable Multimedia Unsolicited Grant Size

cops.pc_mm_vbul_ul  Usage Limit
    Unsigned 64-bit integer
    PacketCable Multimedia Volume-Based Usage Limit

cops.pc_mm_vi_major  Major Version Number
    Unsigned 16-bit integer
    PacketCable Multimedia Major Version Number

cops.pc_mm_vi_minor  Minor Version Number
    Unsigned 16-bit integer
    PacketCable Multimedia Minor Version Number
```

```
cops.pc_packetcable_err_code  Error Code
    Unsigned 16-bit integer
    Error Code

cops.pc_packetcable_sub_code  Error Sub Code
    Unsigned 16-bit integer
    Error Sub Code

cops.pc_peak_data_rate  Peak Data Rate
    Peak Data Rate

cops.pc_prks_ip  PRKS IP Address
    IPv4 address
    PRKS IP Address

cops.pc_prks_ip_port  PRKS IP Port
    Unsigned 16-bit integer
    PRKS IP Port

cops.pc_protocol_id  Protocol ID
    Unsigned 8-bit integer
    Protocol ID

cops.pc_reason_code  Reason Code
    Unsigned 16-bit integer
    Reason Code

cops.pc_remote_flags  Flags
    Unsigned 16-bit integer
    Flags

cops.pc_remote_gate_id  Remote Gate ID
    Unsigned 32-bit integer
    Remote Gate ID

cops.pc_reserved  Reserved
    Unsigned 32-bit integer
    Reserved

cops.pc_session_class  Session Class
    Unsigned 8-bit integer
    Session Class

cops.pc_slack_term  Slack Term
    Unsigned 32-bit integer
    Slack Term

cops.pc_spec_rate  Rate
    Rate

cops.pc_src_ip  Source IP Address
    IPv4 address
    Source IP Address

cops.pc_src_port  Source IP Port
    Unsigned 16-bit integer
    Source IP Port

cops.pc_srks_ip  SRKS IP Address
    IPv4 address
    SRKS IP Address
```

```
cops.pc_srks_ip_port  SRKS IP Port
    Unsigned 16-bit integer
    SRKS IP Port

cops.pc_subscriber_id4  Subscriber Identifier (IPv4)
    IPv4 address
    Subscriber Identifier (IPv4)

cops.pc_subscriber_id6  Subscriber Identifier (IPv6)
    IPv6 address
    Subscriber Identifier (IPv6)

cops.pc_subtree  Object Subtree
    No value
    Object Subtree

cops.pc_t1_value  Timer T1 Value (sec)
    Unsigned 16-bit integer
    Timer T1 Value (sec)

cops.pc_t7_value  Timer T7 Value (sec)
    Unsigned 16-bit integer
    Timer T7 Value (sec)

cops.pc_t8_value  Timer T8 Value (sec)
    Unsigned 16-bit integer
    Timer T8 Value (sec)

cops.pc_token_bucket_rate  Token Bucket Rate
    Token Bucket Rate

cops.pc_token_bucket_size  Token Bucket Size
    Token Bucket Size

cops.pc_transaction_id  Transaction Identifier
    Unsigned 16-bit integer
    Transaction Identifier

cops.pdp.tcp_port  TCP Port Number
    Unsigned 32-bit integer
    TCP Port Number of PDP in PDPRedirAddr/LastPDPAddr object

cops.pdprediraddr.ipv4  IPv4 address
    IPv4 address
    IPv4 address in COPS PDPRedirAddr object

cops.pdprediraddr.ipv6  IPv6 address
    IPv6 address
    IPv6 address in COPS PDPRedirAddr object

cops.pepid.id  Contents: PEP Id
    String
    PEP Id in PEPID object

cops.pprid.prefix_id  Prefix Identifier

cops.prid.instance_id  PRID Instance Identifier

cops.reason  Reason
    Unsigned 16-bit integer
    Reason in Reason object
```

```

cops.reason_sub Reason Sub-code
    Unsigned 16-bit integer
    Reason Sub-code in Reason object

cops.report_type Contents: Report-Type
    Unsigned 16-bit integer
    Report-Type in Report-Type object

cops.s_num S-Num
    Unsigned 8-bit integer
    S-Num in COPS-PR Object Header

cops.s_type S-Type
    Unsigned 8-bit integer
    S-Type in COPS-PR Object Header

cops.ver_flags Version and Flags
    Unsigned 8-bit integer
    Version and Flags in COPS Common Header

cops.version Version
    Unsigned 8-bit integer
    Version in COPS Common Header

```

#### **Common Unix Printing System (CUPS) Browsing Protocol (cups)**

```

cups.ptype Type
    Unsigned 32-bit integer

cups.state State
    Unsigned 8-bit integer

```

#### **Component Status Protocol (componentstatusprotocol)**

```

componentstatusprotocol.componentassociation_duration Duration
    Unsigned 64-bit integer

componentstatusprotocol.componentassociation_flags Flags
    Unsigned 16-bit integer

componentstatusprotocol.componentassociation_ppid PPID
    Unsigned 32-bit integer

componentstatusprotocol.componentassociation_protocolid ProtocolID
    Unsigned 16-bit integer

componentstatusprotocol.componentassociation_receiverid ReceiverID
    Unsigned 64-bit integer

componentstatusprotocol.componentstatusreport_AssociationArray AssociationArray
    Unsigned 32-bit integer

componentstatusprotocol.componentstatusreport_associations Associations
    Unsigned 16-bit integer

componentstatusprotocol.componentstatusreport_location Location
    String

componentstatusprotocol.componentstatusreport_reportinterval ReportInterval
    Unsigned 32-bit integer

componentstatusprotocol.componentstatusreport_status Status
    String

```

```

componentstatusprotocol.componentstatusreport_workload  Workload
    Unsigned 16-bit integer
componentstatusprotocol.message_flags  Flags
    Unsigned 8-bit integer
componentstatusprotocol.message_length  Length
    Unsigned 16-bit integer
componentstatusprotocol.message_senderid  SenderID
    Unsigned 64-bit integer
componentstatusprotocol.message_sendertimestamp  SenderTimeStamp
    Unsigned 64-bit integer
componentstatusprotocol.message_type  Type
    Unsigned 8-bit integer
componentstatusprotocol.message_version  Version
    Unsigned 32-bit integer

```

### Compressed Data Type (cdt)

```

cdt.CompressedData  CompressedData
    No value
    cdt.CompressedData
cdt.algorithmID_OID  algorithmID-OID
    cdt.OBJECT_IDENTIFIER
cdt.algorithmID_ShortForm  algorithmID-ShortForm
    Signed 32-bit integer
    cdt.AlgorithmID_ShortForm
cdt.compressedContent  compressedContent
    Byte array
    cdt.CompressedContent
cdt.compressedContentInfo  compressedContentInfo
    No value
    cdt.CompressedContentInfo
cdt.compressionAlgorithm  compressionAlgorithm
    Unsigned 32-bit integer
    cdt.CompressionAlgorithmIdentifier
cdt.contentType  contentType
    Unsigned 32-bit integer
    cdt.T_contentType
cdt.contentType_OID  contentType-OID
    cdt.T_contentType_OID
cdt.contentType_ShortForm  contentType-ShortForm
    Signed 32-bit integer
    cdt.ContentType_ShortForm

```

### Compuserve GIF (image-gif)

```

image-gif.end  Trailer (End of the GIF stream)
    No value
    This byte tells the decoder that the data stream is finished.

```

image-gif.extension Extension  
No value  
Extension.

image-gif.extension.label Extension label  
Unsigned 8-bit integer  
Extension label.

image-gif.global.bpp Image bits per pixel minus 1  
Unsigned 8-bit integer  
The number of bits per pixel is one plus the field value.

image-gif.global.color\_bpp Bits per color minus 1  
Unsigned 8-bit integer  
The number of bits per color is one plus the field value.

image-gif.global.color\_map Global color map  
Byte array  
Global color map.

image-gif.global.color\_map.ordered Global color map is ordered  
Unsigned 8-bit integer  
Indicates whether the global color map is ordered.

image-gif.global.color\_map.present Global color map is present  
Unsigned 8-bit integer  
Indicates if the global color map is present

image-gif.global.pixel\_aspect\_ratio Global pixel aspect ratio  
Unsigned 8-bit integer  
Gives an approximate value of the aspect ratio of the pixels.

image-gif.image Image  
No value  
Image.

image-gif.image.code\_size LZW minimum code size  
Unsigned 8-bit integer  
Minimum code size for the LZW compression.

image-gif.image.height Image height  
Unsigned 16-bit integer  
Image height.

image-gif.image.left Image left position  
Unsigned 16-bit integer  
Offset between left of Screen and left of Image.

image-gif.image.top Image top position  
Unsigned 16-bit integer  
Offset between top of Screen and top of Image.

image-gif.image.width Image width  
Unsigned 16-bit integer  
Image width.

image-gif.image\_background\_index Background color index  
Unsigned 8-bit integer  
Index of the background color in the color map.

image-gif.local.bpp Image bits per pixel minus 1  
Unsigned 8-bit integer  
The number of bits per pixel is one plus the field value.

image-gif.local.color\_bpp Bits per color minus 1  
Unsigned 8-bit integer  
The number of bits per color is one plus the field value.

image-gif.local.color\_map Local color map  
Byte array  
Local color map.

image-gif.local.color\_map.ordered Local color map is ordered  
Unsigned 8-bit integer  
Indicates whether the local color map is ordered.

image-gif.local.color\_map.present Local color map is present  
Unsigned 8-bit integer  
Indicates if the local color map is present

image-gif.screen.height Screen height  
Unsigned 16-bit integer  
Screen height

image-gif.screen.width Screen width  
Unsigned 16-bit integer  
Screen width

image-gif.version Version  
String  
GIF Version

#### **Computer Interface to Message Distribution (cimd)**

cimd.aoi Alphanumeric Originating Address

dcerpc.dg_frag_num  Fragment num
    Unsigned 16-bit integer
dcerpc.dg_if_id  Interface
dcerpc.dg_if_ver  Interface Ver
    Unsigned 32-bit integer
dcerpc.dg_ihint  Interface Hint
    Unsigned 16-bit integer
dcerpc.dg_seqnum  Sequence num
    Unsigned 32-bit integer
dcerpc.dg_serial_hi  Serial High
    Unsigned 8-bit integer
dcerpc.dg_serial_lo  Serial Low
    Unsigned 8-bit integer
dcerpc.dg_server_boot  Server boot time
    Date/Time stamp
dcerpc.dg_status  Status
    Unsigned 32-bit integer
dcerpc.drep  Data Representation
    Byte array
```

```
dcerpc.drep.byteorder  Byte order
    Unsigned 8-bit integer
dcerpc.drep.character  Character
    Unsigned 8-bit integer
dcerpc.drep.fp         Floating-point
    Unsigned 8-bit integer
dcerpc.fack_max_frag_size  Max Frag Size
    Unsigned 32-bit integer
dcerpc.fack_max_tsdu   Max TSDU
    Unsigned 32-bit integer
dcerpc.fack_selack    Selective ACK
    Unsigned 32-bit integer
dcerpc.fack_selack_len  Selective ACK Len
    Unsigned 16-bit integer
dcerpc.fack_serial_num  Serial Num
    Unsigned 16-bit integer
dcerpc.fack_vers      FACK Version
    Unsigned 8-bit integer
dcerpc.fack_window_size  Window Size
    Unsigned 16-bit integer
dcerpc.fragment      DCE/RPC Fragment
    Frame number
    DCE/RPC Fragment
dcerpc.fragment.error  Defragmentation error
    Frame number
    Defragmentation error due to illegal fragments
dcerpc.fragment.multipletails  Multiple tail fragments found
    Boolean
    Several tails were found when defragmenting the packet
dcerpc.fragment.overlap  Fragment overlap
    Boolean
    Fragment overlaps with other fragments
dcerpc.fragment.overlap.conflict  Conflicting data in fragment overlap
    Boolean
    Overlapping fragments contained conflicting data
dcerpc.fragment.toolongfragment  Fragment too long
    Boolean
    Fragment contained data past end of packet
dcerpc.fragments      Reassembled DCE/RPC Fragments
    No value
    DCE/RPC Fragments
dcerpc.krb5_av.auth_verifier  Authentication Verifier
    Byte array
dcerpc.krb5_av.key_vers_num  Key Version Number
    Unsigned 8-bit integer
```

```
dcerpc.krb5_av.prot_level  Protection Level
    Unsigned 8-bit integer

dcerpc.nt.acb.autolock  Account is autolocked
    Boolean
    If this account has been autolocked

dcerpc.nt.acb.disabled  Account disabled
    Boolean
    If this account is enabled or disabled

dcerpc.nt.acb.domtrust  Interdomain trust account
    Boolean
    Interdomain trust account

dcerpc.nt.acb.homedirreq  Home dir required
    Boolean
    Is homedirs required for this account?

dcerpc.nt.acb.mns  MNS logon user account
    Boolean
    MNS logon user account

dcerpc.nt.acb.normal  Normal user account
    Boolean
    If this is a normal user account

dcerpc.nt.acb.pwnoexp  Password expires
    Boolean
    If this account expires or not

dcerpc.nt.acb.pwnotreq  Password required
    Boolean
    If a password is required for this account?

dcerpc.nt.acb.svrtrust  Server trust account
    Boolean
    Server trust account

dcerpc.nt.acb.tempdup  Temporary duplicate account
    Boolean
    If this is a temporary duplicate account

dcerpc.nt.acb.wstrust  Workstation trust account
    Boolean
    Workstation trust account

dcerpc.nt.acct_ctrl  Acct Ctrl
    Unsigned 32-bit integer
    Acct CTRL

dcerpc.nt.attr  Attributes
    Unsigned 32-bit integer

dcerpc.nt.close_frame  Frame handle closed
    Frame number
    Frame handle closed

dcerpc.nt.count  Count
    Unsigned 32-bit integer
    Number of elements in following array
```

```
dcerpc.nt.domain_sid  Domain SID
    String
    The Domain SID
dcerpc.nt.guid  GUID
    GUID (uuid for groups?)
dcerpc.nt.logonhours.divisions  Divisions
    Unsigned 16-bit integer
    Number of divisions for LOGON_HOURS
dcerpc.nt.open_frame  Frame handle opened
    Frame number
    Frame handle opened
dcerpc.nt.str.len  Length
    Unsigned 16-bit integer
    Length of string in short integers
dcerpc.nt.str.size  Size
    Unsigned 16-bit integer
    Size of string in short integers
dcerpc.nt.unknown.char  Unknown char
    Unsigned 8-bit integer
    Unknown char. If you know what this is, contact wireshark developers.
dcerpc.obj_id  Object
dcerpc.op  Operation
    Unsigned 16-bit integer
dcerpc.opnum  Opnum
    Unsigned 16-bit integer
dcerpc.pkt_type  Packet type
    Unsigned 8-bit integer
dcerpc.reassembled_in  Reassembled PDU in frame
    Frame number
    The DCE/RPC PDU is completely reassembled in the packet with this number
dcerpc.referent_id  Referent ID
    Unsigned 32-bit integer
    Referent ID for this NDR encoded pointer
dcerpc.request_in  Request in frame
    Frame number
    This packet is a response to the packet with this number
dcerpc.response_in  Response in frame
    Frame number
    This packet will be responded in the packet with this number
dcerpc.server_accepting_cancels  Server accepting cancels
    Boolean
dcerpc.time  Time from request
    Time duration
    Time between Request and Response for DCE-RPC calls
dcerpc.unknown_if_id  Unknown DCERPC interface id
    Boolean
```

```
dcerpc.ver  Version
  Unsigned 8-bit integer
dcerpc.ver_minor  Version (minor)
  Unsigned 8-bit integer
```

**DCE Security ID Mapper (secidmap)**

```
secidmap.opnum  Operation
  Unsigned 16-bit integer
  Operation
```

oxid_bindings         OxidBindings
    No value
oxid_delfromset       DelFromSet
    Unsigned 16-bit integer
oxid_ipid             IPID
oxid_oid              OID
    Unsigned 64-bit integer
oxid_oxid             OXID
    Unsigned 64-bit integer
oxid_ping_backoff_factor  PingBackoffFactor
    Unsigned 16-bit integer
```

```
oxid_protseqs  ProtSeq
    Unsigned 16-bit integer
oxid_requested_protseqs  RequestedProtSeq
    Unsigned 16-bit integer
oxid_seqnum    SeqNum
    Unsigned 16-bit integer
oxid_setid     SetId
    Unsigned 64-bit integer
```

**DCP Application Framing Layer (dcp-af)**

```
dcp-af.crc     CRC
    Unsigned 16-bit integer
    CRC
dcp-af.crc_ok  CRC OK
    Boolean
    AF CRC OK
dcp-af.crcflag  crc flag
    Boolean
    Frame is protected by CRC
dcp-af.len     length
    Unsigned 32-bit integer
    length in bytes of the payload
dcp-af.maj     Major Revision
    Unsigned 8-bit integer
    Major Protocol Revision
dcp-af.min     Minor Revision
    Unsigned 8-bit integer
    Minor Protocol Revision
dcp-af.pt      Payload Type
    String
    T means Tag Packets, all other values reserved
dcp-af.seq     frame count
    Unsigned 16-bit integer
    Logical Frame Number
```

**DCP Protection, Fragmentation & Transport Layer (dcp-pft)**

```
dcp-pft.addr   Addr
    Boolean
    When set the optional transport header is present
dcp-pft.cmax   C max
    Unsigned 16-bit integer
    Maximum number of RS chunks sent
dcp-pft.crc    header CRC
    Unsigned 16-bit integer
    PFT Header CRC
dcp-pft.crc_ok  PFT CRC OK
    Boolean
    PFT Header CRC OK
```

```
dcp-pft.dest  dest addr
    Unsigned 16-bit integer
    PFT destination identifier

dcp-pft.fcount  Fragment Count
    Unsigned 24-bit integer
    Number of fragments produced from this AF Packet

dcp-pft.fec  FEC
    Boolean
    When set the optional RS header is present

dcp-pft.findex  Fragment Index
    Unsigned 24-bit integer
    Index of the fragment within one AF Packet

dcp-pft.fragment  Message fragment
    Frame number

dcp-pft.fragment.error  Message defragmentation error
    Frame number

dcp-pft.fragment.multiple_tails  Message has multiple tail fragments
    Boolean

dcp-pft.fragment.overlap  Message fragment overlap
    Boolean

dcp-pft.fragment.overlap.conflicts  Message fragment overlapping with conflictin
    Boolean

dcp-pft.fragment.too_long_fragment  Message fragment too long
    Boolean

dcp-pft.fragments  Message fragments
    No value

dcp-pft.len  fragment length
    Unsigned 16-bit integer
    length in bytes of the payload of this fragment

dcp-pft.payload  payload
    Byte array
    PFT Payload

dcp-pft.pt  Sub-protocol
    Unsigned 8-bit integer
    Always AF

dcp-pft.reassembled.in  Reassembled in
    Frame number

dcp-pft.rs_corrected  RS Symbols Corrected
    Signed 16-bit integer
    Number of symbols corrected by RS decode or -1 for failure

dcp-pft.rs_ok  RS decode OK
    Boolean
    successfully decoded RS blocks

dcp-pft.rsk  RSk
    Unsigned 8-bit integer
    The length of the Reed Solomon data word
```

dcp-pft.rsz RSz  
Unsigned 8-bit integer  
The number of padding bytes in the last Reed Solomon block

dcp-pft.rxmin Rx min  
Unsigned 16-bit integer  
Minimum number of fragments needed for RS decode

dcp-pft.seq Sequence No  
Unsigned 16-bit integer  
PFT Sequence No

dcp-pft.source source addr  
Unsigned 16-bit integer  
PFT source identifier

#### **DCP Tag Packet Layer (dcp-tpl)**

dcp-tpl.ptr Type  
String  
Protocol Type & Revision

dcp-tpl.tlv tag  
Byte array  
Tag Packet

#### **DEC DNA Routing Protocol (dec\_dna)**

dec\_dna.ctl.acknum Ack/Nak  
No value  
ack/nak number

dec\_dna.ctl.blk\_size Block size  
Unsigned 16-bit integer  
Block size

dec\_dna.ctl.elist List of router states  
No value  
Router states

dec\_dna.ctl.ename Ethernet name  
Byte array  
Ethernet name

dec\_dna.ctl.fcncval Verification message function value  
Byte array  
Routing Verification function

dec\_dna.ctl.id Transmitting system ID  
6-byte Hardware (MAC) Address  
Transmitting system ID

dec\_dna.ctl.iinfo.blkreq Blocking requested  
Boolean  
Blocking requested?

dec\_dna.ctl.iinfo.mta Accepts multicast traffic  
Boolean  
Accepts multicast traffic?

```
dec_dna.ct1.iinfo.node_type  Node type
    Unsigned 8-bit integer
    Node type

dec_dna.ct1.iinfo.rej  Rejected
    Boolean
    Rejected message

dec_dna.ct1.iinfo.verf  Verification failed
    Boolean
    Verification failed?

dec_dna.ct1.iinfo.vrf  Verification required
    Boolean
    Verification required?

dec_dna.ct1.prio  Routing priority
    Unsigned 8-bit integer
    Routing priority

dec_dna.ct1.reserved  Reserved
    Byte array
    Reserved

dec_dna.ct1.router_id  Router ID
    6-byte Hardware (MAC) Address
    Router ID

dec_dna.ct1.router_prio  Router priority
    Unsigned 8-bit integer
    Router priority

dec_dna.ct1.router_state  Router state
    String
    Router state

dec_dna.ct1.seed  Verification seed
    Byte array
    Verification seed

dec_dna.ct1.segment  Segment
    No value
    Routing Segment

dec_dna.ct1.test_data  Test message data
    Byte array
    Routing Test message data

dec_dna.ct1.tiinfo  Routing information
    Unsigned 8-bit integer
    Routing information

dec_dna.ct1.timer  Hello timer(seconds)
    Unsigned 16-bit integer
    Hello timer in seconds

dec_dna.ct1.version  Version
    No value
    Control protocol version

dec_dna.ct1_neighbor  Neighbor
    6-byte Hardware (MAC) Address
    Neighbour ID
```

```
dec_dna.dst.address  Destination Address
    6-byte Hardware (MAC) Address
    Destination address

dec_dna.dst_node     Destination node
    Unsigned 16-bit integer
    Destination node

dec_dna.flags        Routing flags
    Unsigned 8-bit integer
    DNA routing flag

dec_dna.flags.RQR    Return to Sender Request
    Boolean
    Return to Sender

dec_dna.flags.RTS    Packet on return trip
    Boolean
    Packet on return trip

dec_dna.flags.control Control packet
    Boolean
    Control packet

dec_dna.flags.discard Discarded packet
    Boolean
    Discarded packet

dec_dna.flags.intra_eth Intra-ethernet packet
    Boolean
    Intra-ethernet packet

dec_dna.flags.msglen Long data packet format
    Unsigned 8-bit integer
    Long message indicator

dec_dna.nl2          Next level 2 router
    Unsigned 8-bit integer
    reserved

dec_dna.nsp.delay    Delayed ACK allowed
    Boolean
    Delayed ACK allowed?

dec_dna.nsp.disc_reason Reason for disconnect
    Unsigned 16-bit integer
    Disconnect reason

dec_dna.nsp.fc_val    Flow control
    No value
    Flow control

dec_dna.nsp.flow_control Flow control
    Unsigned 8-bit integer
    Flow control(stop, go)

dec_dna.nsp.info     Version info
    Unsigned 8-bit integer
    Version info

dec_dna.nsp.msg_type  DNA NSP message
    Unsigned 8-bit integer
    NSP message
```

```
dec_dna.nsp.segnum  Message number
                   Unsigned 16-bit integer
                   Segment number

dec_dna.nsp.segsize Maximum data segment size
                   Unsigned 16-bit integer
                   Max. segment size

dec_dna.nsp.services Requested services
                   Unsigned 8-bit integer
                   Services requested

dec_dna.proto_type Protocol type
                   Unsigned 8-bit integer
                   reserved

dec_dna.rt.msg_type Routing control message
                   Unsigned 8-bit integer
                   Routing control

dec_dna.sess.conn   Session connect data
                   No value
                   Session connect data

dec_dna.sess.dst_name Session Destination end user
                   String
                   Session Destination end user

dec_dna.sess.grp_code Session Group code
                   Unsigned 16-bit integer
                   Session group code

dec_dna.sess.menu_ver Session Menu version
                   String
                   Session menu version

dec_dna.sess.obj_type Session Object type
                   Unsigned 8-bit integer
                   Session object type

dec_dna.sess.rqstr_id Session Requestor ID
                   String
                   Session requestor ID

dec_dna.sess.src_name Session Source end user
                   String
                   Session Source end user

dec_dna.sess.usr_code Session User code
                   Unsigned 16-bit integer
                   Session User code

dec_dna.src.addr    Source Address
                   6-byte Hardware (MAC) Address
                   Source address

dec_dna.src_node    Source node
                   Unsigned 16-bit integer
                   Source node

dec_dna.svc_cls     Service class
                   Unsigned 8-bit integer
                   reserved
```

```
dec_dna.visit_cnt  Visit count
                   Unsigned 8-bit integer
                   Visit count

dec_dna.vst_node   Nodes visited ty this package
                   Unsigned 8-bit integer
                   Nodes visited
```

**DEC Spanning Tree Protocol (dec\_stp)**

```
dec_stp.bridge.mac  Bridge MAC
                    6-byte Hardware (MAC) Address

dec_stp.bridge.pri  Bridge Priority
                    Unsigned 16-bit integer

dec_stp.flags       BPDU flags
                    Unsigned 8-bit integer

dec_stp.flags.short_timers  Use short timers
                    Boolean

dec_stp.flags.tc     Topology Change
                    Boolean

dec_stp.flags.tcack  Topology Change Acknowledgment
                    Boolean

dec_stp.forward      Forward Delay
                    Unsigned 8-bit integer

dec_stp.hello        Hello Time
                    Unsigned 8-bit integer

dec_stp.max_age      Max Age
                    Unsigned 8-bit integer

dec_stp.msg_age      Message Age
                    Unsigned 8-bit integer

dec_stp.port         Port identifier
                    Unsigned 8-bit integer

dec_stp.protocol     Protocol Identifier
                    Unsigned 8-bit integer

dec_stp.root.cost    Root Path Cost
                    Unsigned 16-bit integer

dec_stp.root.mac     Root MAC
                    6-byte Hardware (MAC) Address

dec_stp.root.pri     Root Priority
                    Unsigned 16-bit integer

dec_stp.type         BPDU Type
                    Unsigned 8-bit integer

dec_stp.version      BPDU Version
                    Unsigned 8-bit integer
```

**DG Gryphon Protocol (gryphon)**

`gryphon.cmd` Command  
Unsigned 8-bit integer

`gryphon.dest` Destination  
Unsigned 8-bit integer

`gryphon.destchan` Destination channel  
Unsigned 8-bit integer

`gryphon.src` Source  
Unsigned 8-bit integer

`gryphon.srcchan` Source channel  
Unsigned 8-bit integer

`gryphon.type` Frame type  
Unsigned 8-bit integer

**DHCP Failover (dhcpfo)**

`dhcpfo.additionalheaderbytes` Additional Header Bytes  
Byte array

`dhcpfo.addressestransferred` addresses transferred  
Unsigned 32-bit integer

`dhcpfo.assignedipaddress` assigned ip address  
IPv4 address

`dhcpfo.bindingstatus` Type  
Unsigned 32-bit integer

`dhcpfo.clienthardwareaddress` Client Hardware Address  
Byte array

`dhcpfo.clienthardwaretype` Client Hardware Type  
Unsigned 8-bit integer

`dhcpfo.clientidentifier` Client Identifier  
String

`dhcpfo.clientlasttransactiontime` Client last transaction time  
Unsigned 32-bit integer

`dhcpfo.dhcpstyleoption` DHCP Style Option  
No value

`dhcpfo.ftddns` FTDDNS  
String

`dhcpfo.graceexpirationtime` Grace expiration time  
Unsigned 32-bit integer

`dhcpfo.hashbucketassignment` Hash bucket assignment  
Byte array

`dhcpfo.leaseexpirationtime` Lease expiration time  
Unsigned 32-bit integer

`dhcpfo.length` Message length  
Unsigned 16-bit integer

`dhcpfo.maxunackedbndupd` Max unacked BNDUPD  
Unsigned 32-bit integer

```
dhcpfo.mclt    MCLT
               Unsigned 32-bit integer
dhcpfo.message Message
               String
dhcpfo.messagedigest Message digest
               String
dhcpfo.optioncode Option Code
               Unsigned 16-bit integer
dhcpfo.optionlength Length
               Unsigned 16-bit integer
dhcpfo.payloaddata Payload Data
               No value
dhcpfo.poffset Payload Offset
               Unsigned 8-bit integer
dhcpfo.potentialexpirationtime Potential expiration time
               Unsigned 32-bit integer
dhcpfo.protocolversion Protocol version
               Unsigned 8-bit integer
dhcpfo.receive timer Receive timer
               Unsigned 32-bit integer
dhcpfo.rejectreason Reject reason
               Unsigned 8-bit integer
dhcpfo.sendingserveripaddress sending server ip-address
               IPv4 address
dhcpfo.serverstatus server status
               Unsigned 8-bit integer
dhcpfo.starttimeofstate Start time of state
               Unsigned 32-bit integer
dhcpfo.time    Time
               Date/Time stamp
dhcpfo.type    Message Type
               Unsigned 8-bit integer
dhcpfo.vendorclass Vendor class
               String
dhcpfo.vendorooption Vendor option
               No value
dhcpfo.xid     Xid
               Unsigned 32-bit integer
```

**DHCPv6 (dhcpv6)**

```
dhcpv6.msgtype Message type
               Unsigned 8-bit integer
dhcpv6.msgtype.n N
               Boolean
```

```
dhcpv6.msgtype.o  O
  Boolean
dhcpv6.msgtype.reserved  Reserved
  Unsigned 8-bit integer
dhcpv6.msgtype.s  S
  Boolean
```

**DICOM (dcm)**

```
dcm.data.ctx  Data Context
  Unsigned 8-bit integer
dcm.data.flags  Flags
  Unsigned 8-bit integer
dcm.data.len  DATA LENGTH
  Unsigned 32-bit integer
dcm.data.tag  Tag
  Byte array
dcm.max_pdu_len  MAX PDU LENGTH
  Unsigned 32-bit integer
dcm.pdi.async  Asynch
  String
dcm.pdi.ctxt  Presentation Context
  Unsigned 8-bit integer
dcm.pdi.impl  Implementation
  String
dcm.pdi.name  Application Context
  String
dcm.pdi.result  Presentation Context result
  Unsigned 8-bit integer
dcm.pdi.syntax  Abstract Syntax
  String
dcm.pdi.version  Version
  String
dcm.pdu  PDU
  Unsigned 8-bit integer
dcm.pdu.pdi  Item
  Unsigned 8-bit integer
dcm.pdu_detail  PDU Detail
  String
dcm.pdu_len  PDU LENGTH
  Unsigned 32-bit integer
```

**DLT User (user\_dlt)**

**DNS Control Program Server (cprpc\_server)**

cprpc\_server.opnum Operation  
Unsigned 16-bit integer  
Operation

**DOCSIS 1.1 (docsis)**

docsis.bpi\_en Encryption  
Boolean  
BPI Enable

docsis.ehdr.act\_grants Active Grants  
Unsigned 8-bit integer  
Active Grants

docsis.ehdr.keyseq Key Sequence  
Unsigned 8-bit integer  
Key Sequence

docsis.ehdr.len Length  
Unsigned 8-bit integer  
TLV Len

docsis.ehdr.minislots MiniSlots  
Unsigned 8-bit integer  
Mini Slots Requested

docsis.ehdr.phsi Payload Header Suppression Index  
Unsigned 8-bit integer  
Payload Header Suppression Index

docsis.ehdr.qind Queue Indicator  
Boolean  
Queue Indicator

docsis.ehdr.rsvd Reserved  
Unsigned 8-bit integer  
Reserved Byte

docsis.ehdr.said SAID  
Unsigned 16-bit integer  
Security Association Identifier

docsis.ehdr.sid SID  
Unsigned 16-bit integer  
Service Identifier

docsis.ehdr.type Type  
Unsigned 8-bit integer  
TLV Type

docsis.ehdr.value Value  
Byte array  
TLV Value

docsis.ehdr.ver Version  
Unsigned 8-bit integer  
Version

docsis.ehdron EHDron  
Boolean  
Extended Header Presence

```
docsis.fcparm  FCParm
    Unsigned 8-bit integer
    Parameter Field

docsis.fctype  FCType
    Unsigned 8-bit integer
    Frame Control Type

docsis.frag_first  First Frame
    Boolean
    First Frame

docsis.frag_last  Last Frame
    Boolean
    Last Frame

docsis.frag_rsvd  Reserved
    Unsigned 8-bit integer
    Reserved

docsis.frag_seq  Fragmentation Sequence #
    Unsigned 8-bit integer
    Fragmentation Sequence Number

docsis.hcs  Header check sequence
    Unsigned 16-bit integer
    Header check sequence

docsis.lensid  Length after HCS (bytes)
    Unsigned 16-bit integer
    Length or SID

docsis.macparm  MacParm
    Unsigned 8-bit integer
    Mac Parameter Field

docsis.toggle_bit  Toggle
    Boolean
    Toggle
```

#### **DOCSIS Appendix C TLV's (docsis\_tlv)**

```
docsis_tlv.auth_block  30 Auth Block
    Byte array
    Auth Block

docsis_tlv.bpi  17 Baseline Privacy Encoding
    Byte array
    Baseline Privacy Encoding

docsis_tlv.bpi_en  29 Privacy Enable
    Boolean
    Privacy Enable

docsis_tlv.clsfr.actstate  .6 Activation State
    Boolean
    Classifier Activation State

docsis_tlv.clsfr.dot1q  .11 802.1Q Classifier Encodings
    Byte array
    802.1Q Classifier Encodings
```

```
docsis_tlv.clsfr.dot1q.ethertype  ..2 VLAN id
    Unsigned 16-bit integer
    VLAN Id

docsis_tlv.clsfr.dot1q.userpri  ..1 User Priority
    Unsigned 16-bit integer
    User Priority

docsis_tlv.clsfr.dot1q.vendorspec  ..43 Vendor Specific Encodings
    Byte array
    Vendor Specific Encodings

docsis_tlv.clsfr.dscact  .7 DSC Action
    Unsigned 8-bit integer
    Dynamic Service Change Action

docsis_tlv.clsfr.err  .8 Error Encodings
    Byte array
    Error Encodings

docsis_tlv.clsfr.err.code  ..2 Error Code
    Unsigned 8-bit integer
    TCP/UDP Destination Port End

docsis_tlv.clsfr.err.msg  ..3 Error Message
    String
    Error Message

docsis_tlv.clsfr.err.param  ..1 Param Subtype
    Unsigned 8-bit integer
    Parameter Subtype

docsis_tlv.clsfr.eth  .10 Ethernet Classifier Encodings
    Byte array
    Ethernet Classifier Encodings

docsis_tlv.clsfr.eth.dmac  ..1 Dest Mac Address
    6-byte Hardware (MAC) Address
    Destination Mac Address

docsis_tlv.clsfr.eth.ethertype  ..3 Ethertype
    Unsigned 24-bit integer
    Ethertype

docsis_tlv.clsfr.eth.smac  ..2 Source Mac Address
    6-byte Hardware (MAC) Address
    Source Mac Address

docsis_tlv.clsfr.id  .2 Classifier ID
    Unsigned 16-bit integer
    Classifier ID

docsis_tlv.clsfr.ip  .9 IP Classifier Encodings
    Byte array
    IP Classifier Encodings

docsis_tlv.clsfr.ip.dmask  ..6 Destination Mask
    IPv4 address
    Destination Mask

docsis_tlv.clsfr.ip.dportend  ..10 Dest Port End
    Unsigned 16-bit integer
    TCP/UDP Destination Port End
```

```
docsis_tlv.clsfr.ip.dportstart  ..9 Dest Port Start
    Unsigned 16-bit integer
    TCP/UDP Destination Port Start

docsis_tlv.clsfr.ip.dst  ..4 Destination Address
    IPv4 address
    Destination Address

docsis_tlv.clsfr.ip.ipproto  ..2 IP Protocol
    Unsigned 16-bit integer
    IP Protocol

docsis_tlv.clsfr.ip.smask  ..5 Source Mask
    IPv4 address
    Source Mask

docsis_tlv.clsfr.ip.sportend  ..8 Source Port End
    Unsigned 16-bit integer
    TCP/UDP Source Port End

docsis_tlv.clsfr.ip.sportstart  ..7 Source Port Start
    Unsigned 16-bit integer
    TCP/UDP Source Port Start

docsis_tlv.clsfr.ip.src  ..3 Source Address
    IPv4 address
    Source Address

docsis_tlv.clsfr.ip.tosmask  ..1 Type Of Service Mask
    Byte array
    Type Of Service Mask

docsis_tlv.clsfr.ref  .1 Classifier Ref
    Unsigned 8-bit integer
    Classifier Reference

docsis_tlv.clsfr.rulepri  .5 Rule Priority
    Unsigned 8-bit integer
    Rule Priority

docsis_tlv.clsfr.sflowid  .4 Service Flow ID
    Unsigned 16-bit integer
    Service Flow ID

docsis_tlv.clsfr.sflowref  .3 Service Flow Ref
    Unsigned 16-bit integer
    Service Flow Reference

docsis_tlv.clsfr.vendor  .43 Vendor Specific Encodings
    Byte array
    Vendor Specific Encodings

docsis_tlv.cmmic  6 CM MIC
    Byte array
    Cable Modem Message Integrity Check

docsis_tlv.cmtsmic  7 CMTS MIC
    Byte array
    CMTS Message Integrity Check

docsis_tlv.cos  4 COS Encodings
    Byte array
    4 COS Encodings
```

```
docsis_tlv.cos.id .1 Class ID
    Unsigned 8-bit integer
    Class ID

docsis_tlv.cos.maxdown .2 Max Downstream Rate (bps)
    Unsigned 32-bit integer
    Max Downstream Rate

docsis_tlv.cos.maxup .3 Max Upstream Rate (bps)
    Unsigned 32-bit integer
    Max Upstream Rate

docsis_tlv.cos.maxupburst .6 Maximum Upstream Burst
    Unsigned 16-bit integer
    Maximum Upstream Burst

docsis_tlv.cos.mingrntdup .5 Guaranteed Upstream Rate
    Unsigned 32-bit integer
    Guaranteed Minimum Upstream Data Rate

docsis_tlv.cos.privacy_enable .7 COS Privacy Enable
    Boolean
    Class of Service Privacy Enable

docsis_tlv.cos.sid .2 Service ID
    Unsigned 16-bit integer
    Service ID

docsis_tlv.cos.upchnlpri .4 Upstream Channel Priority
    Unsigned 8-bit integer
    Upstream Channel Priority

docsis_tlv.cosign_cvc 33 Co-Signer CVC
    Byte array
    Co-Signer CVC

docsis_tlv.cpe_ether 14 CPE Ethernet Addr
    6-byte Hardware (MAC) Address
    CPE Ethernet Addr

docsis_tlv.downclsfr 23 Downstream Classifier
    Byte array
    23 Downstream Classifier

docsis_tlv.downfreq 1 Downstream Frequency
    Unsigned 32-bit integer
    Downstream Frequency

docsis_tlv.downsflow 25 Downstream Service Flow
    Byte array
    25 Downstream Service Flow

docsis_tlv.hmac_digest 27 HMAC Digest
    Byte array
    HMAC Digest

docsis_tlv.key_seq 31 Key Sequence Number
    Byte array
    Key Sequence Number

docsis_tlv.map.docsver .2 Docsis Version
    Unsigned 8-bit integer
    DOCSIS Version
```

```
docsis_tlv.maxclass  28 Max # of Classifiers
    Unsigned 16-bit integer
    Max # of Classifiers

docsis_tlv.maxcpe    18 Max # of CPE's
    Unsigned 8-bit integer
    Max Number of CPE's

docsis_tlv.mcap      5 Modem Capabilities
    Byte array
    Modem Capabilities

docsis_tlv.mcap.concat  .1 Concatenation Support
    Boolean
    Concatenation Support

docsis_tlv.mcap.dcc   .12 DCC Support
    Boolean
    DCC Support

docsis_tlv.mcap.dot1pfiltering  .9 802.1P Filtering Support
    Unsigned 8-bit integer
    802.1P Filtering Support

docsis_tlv.mcap.dot1qfilt  .9 802.1Q Filtering Support
    Unsigned 8-bit integer
    802.1Q Filtering Support

docsis_tlv.mcap.downsaid  .7 # Downstream SAIDs Supported
    Unsigned 8-bit integer
    Downstream Said Support

docsis_tlv.mcap.frag     .3 Fragmentation Support
    Boolean
    Fragmentation Support

docsis_tlv.mcap.igmp     .5 IGMP Support
    Boolean
    IGMP Support

docsis_tlv.mcap.numtaps  .11 # Xmit Equalizer Taps
    Unsigned 8-bit integer
    Number of Transmit Equalizer Taps

docsis_tlv.mcap.phs      .4 PHS Support
    Boolean
    PHS Support

docsis_tlv.mcap.privacy  .6 Privacy Support
    Boolean
    Privacy Support

docsis_tlv.mcap.tapspersym  .10 Xmit Equalizer Taps/Sym
    Unsigned 8-bit integer
    Transmit Equalizer Taps per Symbol

docsis_tlv.mcap.upsid    .8 # Upstream SAIDs Supported
    Unsigned 8-bit integer
    Upstream SID Support

docsis_tlv.mfgr_cvc     32 Manufacturer CVC
    Byte array
    Manufacturer CVC
```

```
docsis_tlv.modemaddr 12 Modem IP Address
    IPv4 address
    Modem IP Address

docsis_tlv.netaccess 3 Network Access
    Boolean
    Network Access TLV

docsis_tlv.phs 26 PHS Rules
    Byte array
    PHS Rules

docsis_tlv.phs.classid .2 Classifier Id
    Unsigned 16-bit integer
    Classifier Id

docsis_tlv.phs.classref .1 Classifier Reference
    Unsigned 8-bit integer
    Classifier Reference

docsis_tlv.phs.dscaction .5 DSC Action
    Unsigned 8-bit integer
    Dynamic Service Change Action

docsis_tlv.phs.err .6 Error Encodings
    Byte array
    Error Encodings

docsis_tlv.phs.err.code ..2 Error Code
    Unsigned 8-bit integer
    Error Code

docsis_tlv.phs.err.msg ..3 Error Message
    String
    Error Message

docsis_tlv.phs.err.param ..1 Param Subtype
    Unsigned 8-bit integer
    Parameter Subtype

docsis_tlv.phs.phsf .7 PHS Field
    Byte array
    PHS Field

docsis_tlv.phs.phsi .8 PHS Index
    Unsigned 8-bit integer
    PHS Index

docsis_tlv.phs.phsm .9 PHS Mask
    Byte array
    PHS Mask

docsis_tlv.phs.phss .10 PHS Size
    Unsigned 8-bit integer
    PHS Size

docsis_tlv.phs.phsv .11 PHS Verify
    Boolean
    PHS Verify

docsis_tlv.phs.sflowid .4 Service flow Id
    Unsigned 16-bit integer
    Service Flow Id
```

```
docsis_tlv.phs.sflowref .3 Service flow reference
    Unsigned 16-bit integer
    Service Flow Reference

docsis_tlv.phs.vendorspec .43 PHS Vendor Specific
    Byte array
    PHS Vendor Specific

docsis_tlv.rng_tech Ranging Technique
    Unsigned 8-bit integer
    Ranging Technique

docsis_tlv.sflow.act_timeout .12 Timeout for Active Params (secs)
    Unsigned 16-bit integer
    Timeout for Active Params (secs)

docsis_tlv.sflow.adm_timeout .13 Timeout for Admitted Params (secs)
    Unsigned 16-bit integer
    Timeout for Admitted Params (secs)

docsis_tlv.sflow.assumed_min_pkt_size .11 Assumed Min Reserved Packet Size
    Unsigned 16-bit integer
    Assumed Minimum Reserved Packet Size

docsis_tlv.sflow.cname .4 Service Class Name
    String
    Service Class Name

docsis_tlv.sflow.err .5 Error Encodings
    Byte array
    Error Encodings

docsis_tlv.sflow.err.code ..2 Error Code
    Unsigned 8-bit integer
    Error Code

docsis_tlv.sflow.err.msg ..3 Error Message
    String
    Error Message

docsis_tlv.sflow.err.param ..1 Param Subtype
    Unsigned 8-bit integer
    Parameter Subtype

docsis_tlv.sflow.grnts_per_intvl .22 Grants Per Interval
    Unsigned 8-bit integer
    Grants Per Interval

docsis_tlv.sflow.id .2 Service Flow Id
    Unsigned 32-bit integer
    Service Flow Id

docsis_tlv.sflow.iptos_overwrite .23 IP TOS Overwrite
    Unsigned 16-bit integer
    IP TOS Overwrite

docsis_tlv.sflow.max_down_lat .14 Maximum Downstream Latency (usec)
    Unsigned 32-bit integer
    Maximum Downstream Latency (usec)

docsis_tlv.sflow.maxburst .9 Maximum Burst (bps)
    Unsigned 32-bit integer
    Maximum Burst (bps)
```

```
docsis_tlv.sflow.maxconcat .14 Max Concat Burst
    Unsigned 16-bit integer
    Max Concatenated Burst

docsis_tlv.sflow.maxtrafrate .8 Maximum Sustained Traffic Rate (bps)
    Unsigned 32-bit integer
    Maximum Sustained Traffic Rate (bps)

docsis_tlv.sflow.mintrafrate .10 Minimum Traffic Rate (bps)
    Unsigned 32-bit integer
    Minimum Traffic Rate (bps)

docsis_tlv.sflow.nom_grant_intvl .20 Nominal Grant Interval (usec)
    Unsigned 32-bit integer
    Nominal Grant Interval (usec)

docsis_tlv.sflow.nominal_polling .17 Nominal Polling Interval(usec)
    Unsigned 32-bit integer
    Nominal Polling Interval(usec)

docsis_tlv.sflow.qos .6 QOS Parameter Set
    Unsigned 8-bit integer
    QOS Parameter Set

docsis_tlv.sflow.ref .1 Service Flow Ref
    Unsigned 16-bit integer
    Service Flow Reference

docsis_tlv.sflow.reqxmitpol .16 Request/Transmission Policy
    Unsigned 32-bit integer
    Request/Transmission Policy

docsis_tlv.sflow.schedtype .15 Scheduling Type
    Unsigned 32-bit integer
    Scheduling Type

docsis_tlv.sflow.sid .3 Service Identifier
    Unsigned 16-bit integer
    Service Identifier

docsis_tlv.sflow.tol_grant_jitter .21 Tolerated Grant Jitter (usec)
    Unsigned 32-bit integer
    Tolerated Grant Jitter (usec)

docsis_tlv.sflow.toler_jitter .18 Tolerated Poll Jitter (usec)
    Unsigned 32-bit integer
    Tolerated Poll Jitter (usec)

docsis_tlv.sflow.trafpri .7 Traffic Priority
    Unsigned 8-bit integer
    Traffic Priority

docsis_tlv.sflow.ugs_size .19 Unsolicited Grant Size (bytes)
    Unsigned 16-bit integer
    Unsolicited Grant Size (bytes)

docsis_tlv.sflow.ugs_timeref .24 UGS Time Reference
    Unsigned 32-bit integer
    UGS Time Reference

docsis_tlv.sflow.vendorspec .43 Vendor Specific Encodings
    Byte array
    Vendor Specific Encodings
```

```
docsis_tlv.snmp_access  10 SNMP Write Access
    Byte array
    SNMP Write Access

docsis_tlv.snmp_obj    11 SNMP Object
    Byte array
    SNMP Object

docsis_tlv.snmpv3     34 SNMPv3 Kickstart Value
    Byte array
    SNMPv3 Kickstart Value

docsis_tlv.snmpv3.publicnum  .2 SNMPv3 Kickstart Manager Public Number
    Byte array
    SNMPv3 Kickstart Value Manager Public Number

docsis_tlv.snmpv3.secname  .1 SNMPv3 Kickstart Security Name
    String
    SNMPv3 Kickstart Security Name

docsis_tlv.subsfltrgrps  37 Subscriber Management Filter Groups
    Byte array
    Subscriber Management Filter Groups

docsis_tlv.subsipentry  Subscriber Management CPE IP Entry
    IPv4 address
    Subscriber Management CPE IP Entry

docsis_tlv.subsitable  36 Subscriber Management CPE IP Table
    Byte array
    Subscriber Management CPE IP Table

docsis_tlv.subsmgmtctrl  35 Subscriber Management Control
    Byte array
    Subscriber Management Control

docsis_tlv.svcunavail  13 Service Not Available Response
    Byte array
    Service Not Available Response

docsis_tlv.svcunavail.classid  Service Not Available: (Class ID)
    Unsigned 8-bit integer
    Service Not Available (Class ID)

docsis_tlv.svcunavail.code  Service Not Available (Code)
    Unsigned 8-bit integer
    Service Not Available (Code)

docsis_tlv.svcunavail.type  Service Not Available (Type)
    Unsigned 8-bit integer
    Service Not Available (Type)

docsis_tlv.sw_upg_file  9 Software Upgrade File
    String
    Software Upgrade File

docsis_tlv.sw_upg_srvr  21 Software Upgrade Server
    IPv4 address
    Software Upgrade Server

docsis_tlv.tftp_time  19 TFTP Server Timestamp
    Unsigned 32-bit integer
    TFTP Server TimeStamp
```

```
docsis_tlv.tftpmodemaddr  20 TFTP Server Provisioned Modem Addr
    IPv4 address
    TFTP Server Provisioned Modem Addr
docsis_tlv.upchid        2 Upstream Channel ID
    Unsigned 8-bit integer
    Service Identifier
docsis_tlv.upclsfr       22 Upstream Classifier
    Byte array
    22 Upstream Classifier
docsis_tlv.upsflow       24 Upstream Service Flow
    Byte array
    24 Upstream Service Flow
docsis_tlv.vendorid      8 Vendor ID
    Byte array
    Vendor Identifier
docsis_tlv.vendorspec    43 Vendor Specific Encodings
    Byte array
    Vendor Specific Encodings
```

**DOCSIS Baseline Privacy Key Management Attributes (docsis\_bpkmattr)**

```
docsis_bpkmattr.auth_key  7 Auth Key
    Byte array
    Auth Key
docsis_bpkmattr.bpiver    22 BPI Version
    Unsigned 8-bit integer
    BPKM Attributes
docsis_bpkmattr.cacert    17 CA Certificate
    Byte array
    CA Certificate
docsis_bpkmattr.cbciv     14 CBC IV
    Byte array
    Cypher Block Chaining
docsis_bpkmattr.cmcert    18 CM Certificate
    Byte array
    CM Certificate
docsis_bpkmattr.cmdid     5 CM Identification
    Byte array
    CM Identification
docsis_bpkmattr.crypto_suite_lst  21 Cryptographic Suite List
    Byte array
    Cryptographic Suite
docsis_bpkmattr.cryptosuite  20 Cryptographic Suite
    Unsigned 16-bit integer
    Cryptographic Suite
docsis_bpkmattr.dispstr   6 Display String
    String
    Display String
```

```
docsis_bpkmattr.dnld_params  28 Download Parameters
    Byte array
    Download Parameters

docsis_bpkmattr.errcode  16 Error Code
    Unsigned 8-bit integer
    Error Code

docsis_bpkmattr.hmacdigest  11 HMAC Digest
    Byte array
    HMAC Digest

docsis_bpkmattr.ipaddr  27 IP Address
    IPv4 address
    IP Address

docsis_bpkmattr.keylife  9 Key Lifetime (s)
    Unsigned 32-bit integer
    Key Lifetime (s)

docsis_bpkmattr.keyseq  10 Key Sequence Number
    Unsigned 8-bit integer
    Key Sequence Number

docsis_bpkmattr.macaddr  3 Mac Address
    6-byte Hardware (MAC) Address
    Mac Address

docsis_bpkmattr.manfid  2 Manufacturer Id
    Byte array
    Manufacturer Id

docsis_bpkmattr.rsa_pub_key  4 RSA Public Key
    Byte array
    RSA Public Key

docsis_bpkmattr.sadescr  23 SA Descriptor
    Byte array
    SA Descriptor

docsis_bpkmattr.said  12 SAID
    Unsigned 16-bit integer
    Security Association ID

docsis_bpkmattr.saquery  25 SA Query
    Byte array
    SA Query

docsis_bpkmattr.saquery_type  26 SA Query Type
    Unsigned 8-bit integer
    SA Query Type

docsis_bpkmattr.satype  24 SA Type
    Unsigned 8-bit integer
    SA Type

docsis_bpkmattr.seccap  19 Security Capabilities
    Byte array
    Security Capabilities

docsis_bpkmattr.serialnum  1 Serial Number
    String
    Serial Number
```

```
docsis_bpkmattr.tek  8 Traffic Encryption Key
    Byte array
    Traffic Encryption Key

docsis_bpkmattr.tekparams  13 TEK Parameters
    Byte array
    TEK Parameters

docsis_bpkmattr.vendordef  127 Vendor Defined
    Byte array
    Vendor Defined
```

**DOCSIS Baseline Privacy Key Management Request (docsis\_bpkmreq)**

```
docsis_bpkmreq.code  BPKM Code
    Unsigned 8-bit integer
    BPKM Request Message

docsis_bpkmreq.ident  BPKM Identifier
    Unsigned 8-bit integer
    BPKM Identifier

docsis_bpkmreq.length  BPKM Length
    Unsigned 16-bit integer
    BPKM Length
```

**DOCSIS Baseline Privacy Key Management Response (docsis\_bpkmrsp)**

```
docsis_bpkmrsp.code  BPKM Code
    Unsigned 8-bit integer
    BPKM Response Message

docsis_bpkmrsp.ident  BPKM Identifier
    Unsigned 8-bit integer
    BPKM Identifier

docsis_bpkmrsp.length  BPKM Length
    Unsigned 16-bit integer
    BPKM Length
```

**DOCSIS Downstream Channel Change Acknowledge (docsis\_dccack)**

```
docsis_dccack.hmac_digest  HMAC-DigestNumber
    Byte array
    HMAC-DigestNumber

docsis_dccack.key_seq_num  Auth Key Sequence Number
    Unsigned 8-bit integer
    Auth Key Sequence Number

docsis_dccack.tran_id  Transaction ID
    Unsigned 16-bit integer
    Transaction ID
```

**DOCSIS Downstream Channel Change Request (docsis\_dccreq)**

```
docsis_dccreq.cmts_mac_addr  CMTS Mac Address
    6-byte Hardware (MAC) Address
    CMTS Mac Address
```

```
docsis_dccreq.ds_chan_id  Downstream Channel ID
    Unsigned 8-bit integer
    Downstream Channel ID

docsis_dccreq.ds_freq    Frequency
    Unsigned 32-bit integer
    Frequency

docsis_dccreq.ds_intlv_depth_i  Interleaver Depth I Value
    Unsigned 8-bit integer
    Interleaver Depth I Value

docsis_dccreq.ds_intlv_depth_j  Interleaver Depth J Value
    Unsigned 8-bit integer
    Interleaver Depth J Value

docsis_dccreq.ds_mod_type  Modulation Type
    Unsigned 8-bit integer
    Modulation Type

docsis_dccreq.ds_sym_rate  Symbol Rate
    Unsigned 8-bit integer
    Symbol Rate

docsis_dccreq.ds_sync_sub  SYNC Substitution
    Unsigned 8-bit integer
    SYNC Substitution

docsis_dccreq.hmac_digest  HMAC-DigestNumber
    Byte array
    HMAC-DigestNumber

docsis_dccreq.init_tech  Initialization Technique
    Unsigned 8-bit integer
    Initialization Technique

docsis_dccreq.key_seq_num  Auth Key Sequence Number
    Unsigned 8-bit integer
    Auth Key Sequence Number

docsis_dccreq.said_sub_cur  SAID Sub - Current Value
    Unsigned 16-bit integer
    SAID Sub - Current Value

docsis_dccreq.said_sub_new  SAID Sub - New Value
    Unsigned 16-bit integer
    SAID Sub - New Value

docsis_dccreq.sf_sfid_cur  SF Sub - SFID Current Value
    Unsigned 32-bit integer
    SF Sub - SFID Current Value

docsis_dccreq.sf_sfid_new  SF Sub - SFID New Value
    Unsigned 32-bit integer
    SF Sub - SFID New Value

docsis_dccreq.sf_sid_cur  SF Sub - SID Current Value
    Unsigned 16-bit integer
    SF Sub - SID Current Value

docsis_dccreq.sf_sid_new  SF Sub - SID New Value
    Unsigned 16-bit integer
    SF Sub - SID New Value
```

```
docsis_dccreq.sf_unsol_grant_tref  SF Sub - Unsolicited Grant Time Reference
    Unsigned 32-bit integer
    SF Sub - Unsolicited Grant Time Reference

docsis_dccreq.tran_id  Transaction ID
    Unsigned 16-bit integer
    Transaction ID

docsis_dccreq.ucd_sub  UCD Substitution
    Byte array
    UCD Substitution

docsis_dccreq.up_chan_id  Up Channel ID
    Unsigned 8-bit integer
    Up Channel ID
```

#### **DOCSIS Downstream Channel Change Response (docsis\_dccrsp)**

```
docsis_dccrsp.cm_jump_time_length  Jump Time Length
    Unsigned 32-bit integer
    Jump Time Length

docsis_dccrsp.cm_jump_time_start  Jump Time Start
    Unsigned 64-bit integer
    Jump Time Start

docsis_dccrsp.conf_code  Confirmation Code
    Unsigned 8-bit integer
    Confirmation Code

docsis_dccrsp.hmac_digest  HMAC-DigestNumber
    Byte array
    HMAC-DigestNumber

docsis_dccrsp.key_seq_num  Auth Key Sequence Number
    Unsigned 8-bit integer
    Auth Key Sequence Number

docsis_dccrsp.tran_id  Transaction ID
    Unsigned 16-bit integer
    Transaction ID
```

#### **DOCSIS Downstream Channel Descriptor (docsis\_dcd)**

```
docsis_dcd.cfg_chan  DSG Configuration Channel
    Unsigned 32-bit integer
    DSG Configuration Channel

docsis_dcd.cfg_tdsg1  DSG Initialization Timeout (Tdsg1)
    Unsigned 16-bit integer
    DSG Initialization Timeout (Tdsg1)

docsis_dcd.cfg_tdsg2  DSG Operational Timeout (Tdsg2)
    Unsigned 16-bit integer
    DSG Operational Timeout (Tdsg2)

docsis_dcd.cfg_tdsg3  DSG Two-Way Retry Timer (Tdsg3)
    Unsigned 16-bit integer
    DSG Two-Way Retry Timer (Tdsg3)
```

```
docsis_dcd.cfg_tdsg4   DSG One-Way Retry Timer (Tdsg4)
    Unsigned 16-bit integer
    DSG One-Way Retry Timer (Tdsg4)

docsis_dcd.cfg_vendor_spec  DSG Configuration Vendor Specific Parameters
    Byte array
    DSG Configuration Vendor Specific Parameters

docsis_dcd.cfr_id   Downstream Classifier Id
    Unsigned 16-bit integer
    Downstream Classifier Id

docsis_dcd.cfr_ip_dest_addr  Downstream Classifier IP Destination Address
    IPv4 address
    Downstream Classifier IP Destination Address

docsis_dcd.cfr_ip_dest_mask  Downstream Classifier IP Destination Mask

drsuapi.opnum  Operation
  Unsigned 16-bit integer
drsuapi.rc  Return code
  Unsigned 32-bit integer

```

**Data (data)**

```

data.data  Data
  Byte array

```

**Data Link SWitching (dlsw)****Data Stream Interface (dsi)**

```

dsi.attn_flag  Flags
  Unsigned 16-bit integer
  Server attention flag
dsi.attn_flag.crash  Crash
  Boolean
  Attention flag, server crash bit
dsi.attn_flag.msg  Message
  Boolean
  Attention flag, server message bit
dsi.attn_flag.reconnect  Don't reconnect
  Boolean
  Attention flag, don't reconnect bit
dsi.attn_flag.shutdown  Shutdown
  Boolean
  Attention flag, server is shutting down
dsi.attn_flag.time  Minutes
  Unsigned 16-bit integer
  Number of minutes
dsi.command  Command
  Unsigned 8-bit integer
  Represents a DSI command.

```

`dsi.data_offset` Data offset  
Signed 32-bit integer  
Data offset

`dsi.error_code` Error code  
Signed 32-bit integer  
Error code

`dsi.flags` Flags  
Unsigned 8-bit integer  
Indicates request or reply.

`dsi.length` Length  
Unsigned 32-bit integer  
Total length of the data that follows the DSI header.

`dsi.open_len` Length  
Unsigned 8-bit integer  
Open session option len

`dsi.open_option` Option  
Byte array  
Open session options (undecoded)

`dsi.open_quantum` Quantum  
Unsigned 32-bit integer  
Server/Attention quantum

`dsi.open_type` Flags  
Unsigned 8-bit integer  
Open session option type.

`dsi.requestid` Request ID  
Unsigned 16-bit integer  
Keeps track of which request this is. Replies must match a Request. IDs mu

`dsi.reserved` Reserved  
Unsigned 32-bit integer  
Reserved for future use. Should be set to zero.

`dsi.server_addr.len` Length  
Unsigned 8-bit integer  
Address length.

`dsi.server_addr.type` Type  
Unsigned 8-bit integer  
Address type.

`dsi.server_addr.value` Value  
Byte array  
Address value

`dsi.server_directory` Directory service  
String  
Server directory service

`dsi.server_flag` Flag  
Unsigned 16-bit integer  
Server capabilities flag

`dsi.server_flag.copyfile` Support copyfile  
Boolean  
Server support copyfile

```
dsi.server_flag.directory  Support directory services
    Boolean
    Server support directory services
dsi.server_flag.fast_copy  Support fast copy
    Boolean
    Server support fast copy
dsi.server_flag.no_save_passwd  Don't allow save password
    Boolean
    Don't allow save password
dsi.server_flag.notify  Support server notifications
    Boolean
    Server support notifications
dsi.server_flag.passwd  Support change password
    Boolean
    Server support change password
dsi.server_flag.reconnect  Support server reconnect
    Boolean
    Server support reconnect
dsi.server_flag.srv_msg  Support server message
    Boolean
    Support server message
dsi.server_flag.srv_sig  Support server signature
    Boolean
    Support server signature
dsi.server_flag.tcpip  Support TCP/IP
    Boolean
    Server support TCP/IP
dsi.server_flag.utf8_name  Support UTF8 server name
    Boolean
    Server support UTF8 server name
dsi.server_flag.uuids  Support UUIDs
    Boolean
    Server supports UUIDs
dsi.server_icon  Icon bitmap
    Byte array
    Server icon bitmap
dsi.server_name  Server name
    String
    Server name
dsi.server_signature  Server signature
    Byte array
    Server signature
dsi.server_type  Server type
    String
    Server type
dsi.server_uams  UAM
    String
    UAM
```

```
dsi.server_vers  AFP version
                 String
                 AFP version
dsi.utf8_server_name  UTF8 Server name
                     String
                     UTF8 Server name
dsi.utf8_server_name_len  Length
                          Unsigned 16-bit integer
                          UTF8 server name length.
```

**Datagram Congestion Control Protocol (dccp)**

```
dccp.ack  Acknowledgement Number
          Unsigned 64-bit integer
dccp.ack_res  Reserved
             Unsigned 16-bit integer
dccp.ccval  CCVal
           Unsigned 8-bit integer
dccp.checksum  Checksum
              Unsigned 16-bit integer
dccp.checksum_bad  Bad Checksum
                  Boolean
dccp.checksum_data  Data Checksum
                   Unsigned 32-bit integer
dccp.cscov  Checksum Coverage
           Unsigned 8-bit integer
dccp.data1  Data 1
           Unsigned 8-bit integer
dccp.data2  Data 2
           Unsigned 8-bit integer
dccp.data3  Data 3
           Unsigned 8-bit integer
dccp.data_offset  Data Offset
                 Unsigned 8-bit integer
dccp.dstport  Destination Port
             Unsigned 16-bit integer
dccp.elapsed_time  Elapsed Time
                  Unsigned 32-bit integer
dccp.feature_number  Feature Number
                    Unsigned 8-bit integer
dccp.malformed  Malformed
               Boolean
dccp.ndp_count  NDP Count
               Unsigned 64-bit integer
dccp.option_type  Option Type
                 Unsigned 8-bit integer
```

```
dccp.options  Options
               No value
               DCCP Options fields

dccp.port     Source or Destination Port
               Unsigned 16-bit integer

dccp.res1     Reserved
               Unsigned 8-bit integer

dccp.res2     Reserved
               Unsigned 8-bit integer

dccp.reset_code  Reset Code
               Unsigned 8-bit integer

dccp.seq      Sequence Number
               Unsigned 64-bit integer

dccp.service_code  Service Code
               Unsigned 32-bit integer

dccp.srcport  Source Port
               Unsigned 16-bit integer

dccp.timestamp  Timestamp
               Unsigned 32-bit integer

dccp.timestamp_echo  Timestamp Echo
               Unsigned 32-bit integer

dccp.type     Type
               Unsigned 8-bit integer

dccp.x        Extended Sequence Numbers
               Boolean
```

#### **Datagram Delivery Protocol (ddp)**

```
ddp.checksum  Checksum
               Unsigned 16-bit integer

ddp.dst       Destination address
               String

ddp.dst.net   Destination Net
               Unsigned 16-bit integer

ddp.dst.node  Destination Node
               Unsigned 8-bit integer

ddp.dst_socket  Destination Socket
               Unsigned 8-bit integer

ddp.hopcount  Hop count
               Unsigned 8-bit integer

ddp.len       Datagram length
               Unsigned 16-bit integer

ddp.src       Source address
               String

ddp.src.net   Source Net
               Unsigned 16-bit integer
```

ddp.src.node Source Node  
Unsigned 8-bit integer

ddp.src\_socket Source Socket  
Unsigned 8-bit integer

ddp.type Protocol type  
Unsigned 8-bit integer

#### **Datagram Transport Layer Security (dtls)**

dtls.alert\_message Alert Message  
No value  
Alert message

dtls.alert\_message.desc Description  
Unsigned 8-bit integer  
Alert message description

dtls.alert\_message.level Level  
Unsigned 8-bit integer  
Alert message level

dtls.app\_data Encrypted Application Data  
Byte array  
Payload is encrypted application data

dtls.change\_cipher\_spec Change Cipher Spec Message  
No value  
Signals a change in cipher specifications

dtls.fragment Message fragment  
Frame number

dtls.fragment.error Message defragmentation error  
Frame number

dtls.fragment.multiple\_tails Message has multiple tail fragments  
Boolean

dtls.fragment.overlap Message fragment overlap  
Boolean

dtls.fragment.overlap.conflicts Message fragment overlapping with conflicting d  
Boolean

dtls.fragment.too\_long\_fragment Message fragment too long  
Boolean

dtls.fragments Message fragments  
No value

dtls.handshake Handshake Protocol  
No value  
Handshake protocol message

dtls.handshake.cert\_type Certificate type  
Unsigned 8-bit integer  
Certificate type

dtls.handshake.cert\_types Certificate types  
No value  
List of certificate types

dtls.handshake.cert\_types\_count Certificate types count  
Unsigned 8-bit integer  
Count of certificate types

dtls.handshake.certificate Certificate  
Byte array  
Certificate

dtls.handshake.certificate\_length Certificate Length  
Unsigned 24-bit integer  
Length of certificate

dtls.handshake.certificates Certificates  
No value  
List of certificates

dtls.handshake.certificates\_length Certificates Length  
Unsigned 24-bit integer  
Length of certificates field

dtls.handshake.cipher\_suites\_length Cipher Suites Length  
Unsigned 16-bit integer  
Length of cipher suites field

dtls.handshake.ciphersuite Cipher Suite  
Unsigned 16-bit integer  
Cipher suite

dtls.handshake.ciphersuites Cipher Suites  
No value  
List of cipher suites supported by client

dtls.handshake.comp\_method Compression Method  
Unsigned 8-bit integer  
Compression Method

dtls.handshake.comp\_methods Compression Methods  
No value  
List of compression methods supported by client

dtls.handshake.comp\_methods\_length Compression Methods Length  
Unsigned 8-bit integer  
Length of compression methods field

dtls.handshake.cookie Cookie  
No value  
Cookie

dtls.handshake.cookie\_length Cookie Length  
Unsigned 8-bit integer  
Length of the cookie field

dtls.handshake.dname Distinguished Name  
Byte array  
Distinguished name of a CA that server trusts

dtls.handshake.dname\_len Distinguished Name Length  
Unsigned 16-bit integer  
Length of distinguished name

dtls.handshake.dnames Distinguished Names  
No value  
List of CAs that server trusts

```
dtls.handshake.dnames_len  Distinguished Names Length
    Unsigned 16-bit integer
    Length of list of CAs that server trusts

dtls.handshake.extension.data  Data
    Byte array
    Hello Extension data

dtls.handshake.extension.len  Length
    Unsigned 16-bit integer
    Length of a hello extension

dtls.handshake.extension.type  Type
    Unsigned 16-bit integer
    Hello extension type

dtls.handshake.extensions_length  Extensions Length
    Unsigned 16-bit integer
    Length of hello extensions

dtls.handshake.fragment_length  Fragment Length
    Unsigned 24-bit integer
    Fragment length of handshake message

dtls.handshake.fragment_offset  Fragment Offset
    Unsigned 24-bit integer
    Fragment offset of handshake message

dtls.handshake.length  Length
    Unsigned 24-bit integer
    Length of handshake message

dtls.handshake.md5_hash  MD5 Hash
    No value
    Hash of messages, master_secret, etc.

dtls.handshake.message_seq  Message Sequence
    Unsigned 16-bit integer
    Message sequence of handshake message

dtls.handshake.random  Random.bytes
    No value
    Random challenge used to authenticate server

dtls.handshake.random_time  Random.gmt_unix_time
    Date/Time stamp
    Unix time field of random structure

dtls.handshake.session_id  Session ID
    Byte array
    Identifies the DTLS session, allowing later resumption

dtls.handshake.session_id_length  Session ID Length
    Unsigned 8-bit integer
    Length of session ID field

dtls.handshake.sha_hash  SHA-1 Hash
    No value
    Hash of messages, master_secret, etc.

dtls.handshake.type  Handshake Type
    Unsigned 8-bit integer
    Type of handshake message
```

```

dtls.handshake.verify_data  Verify Data
    No value
    Opaque verification data

dtls.handshake.version  Version
    Unsigned 16-bit integer
    Maximum version supported by client

dtls.reassembled.in  Reassembled in
    Frame number

dtls.record  Record Layer
    No value
    Record layer

dtls.record.content_type  Content Type
    Unsigned 8-bit integer
    Content type

dtls.record.epoch  Epoch
    Unsigned 16-bit integer
    Epoch

dtls.record.length  Length
    Unsigned 16-bit integer
    Length of DTLS record data

dtls.record.sequence_number  Sequence Number
    Double-precision floating point
    Sequence Number

dtls.record.version  Version
    Unsigned 16-bit integer
    Record layer version.

```

**Daytime Protocol (daytime)**

```

daytime.string  Daytime
    String
    String containing time and date

```

**Decompressed SigComp message as raw text (raw\_sigcomp)****DeskTop PassThrough Protocol (dtpt)**

```

dtpt.blob.cbSize  cbSize
    Unsigned 32-bit integer
    cbSize field in BLOB

dtpt.blob.data  Data
    Byte array
    Blob Data Block

dtpt.blob.data_length  Length
    Unsigned 32-bit integer
    Length of the Blob Data Block

dtpt.blob.pBlobData  pBlobData
    Unsigned 32-bit integer
    pBlobData field in BLOB

```

```
dtpt.blob_size  Blob Size
  Unsigned 32-bit integer
  Size of the binary BLOB

dtpt.buffer_size  Buffer Size
  Unsigned 32-bit integer
  Buffer Size

dtpt.comment  Comment
  String
  Comment

dtpt.context  Context
  String
  Context

dtpt.cs_addr.local  Local Address
  Unsigned 32-bit integer
  Local Address

dtpt.cs_addr.local_length  Local Address Length
  Unsigned 32-bit integer
  Local Address Pointer

dtpt.cs_addr.local_pointer  Local Address Pointer
  Unsigned 32-bit integer
  Local Address Pointer

dtpt.cs_addr.remote  Remote Address
  Unsigned 32-bit integer
  Remote Address

dtpt.cs_addr.remote_length  Remote Address Length
  Unsigned 32-bit integer
  Remote Address Pointer

dtpt.cs_addr.remote_pointer  Remote Address Pointer
  Unsigned 32-bit integer
  Remote Address Pointer

dtpt.cs_addrs.length1  Length of CS Addresses Part 1
  Unsigned 32-bit integer
  Length of CS Addresses Part 1

dtpt.cs_addrs.number  Number of CS Addresses
  Unsigned 32-bit integer
  Number of CS Addresses

dtpt.cs_addrs.protocol  Protocol
  Unsigned 32-bit integer
  Protocol

dtpt.cs_addrs.socket_type  Socket Type
  Unsigned 32-bit integer
  Socket Type

dtpt.data_size  Data Size
  Unsigned 32-bit integer
  Data Size

dtpt.error  Last Error
  Unsigned 32-bit integer
  Last Error
```

```
dtpt.flags  ControlFlags
    Unsigned 32-bit integer
    ControlFlags as documented for WSALookupServiceBegin

dtpt.flags.containers  CONTAINERS
    Boolean
    CONTAINERS

dtpt.flags.deep  DEEP
    Boolean
    DEEP

dtpt.flags.flushcache  FLUSHCACHE
    Boolean
    FLUSHCACHE

dtpt.flags.flushprevious  FLUSHPREVIOUS
    Boolean
    FLUSHPREVIOUS

dtpt.flags.nearest  NEAREST
    Boolean
    NEAREST

dtpt.flags.nocontainers  NOCONTAINERS
    Boolean
    NOCONTAINERS

dtpt.flags.res_service  RES_SERVICE
    Boolean
    RES_SERVICE

dtpt.flags.return_addr  RETURN_ADDR
    Boolean
    RETURN_ADDR

dtpt.flags.return_aliases  RETURN_ALIASES
    Boolean
    RETURN_ALIASES

dtpt.flags.return_blob  RETURN_BLOB
    Boolean
    RETURN_BLOB

dtpt.flags.return_comment  RETURN_COMMENT
    Boolean
    RETURN_COMMENT

dtpt.flags.return_name  RETURN_NAME
    Boolean
    RETURN_NAME

dtpt.flags.return_query_string  RETURN_QUERY_STRING
    Boolean
    RETURN_QUERY_STRING

dtpt.flags.return_type  RETURN_TYPE
    Boolean
    RETURN_TYPE

dtpt.flags.return_version  RETURN_VERSION
    Boolean
    RETURN_VERSION
```

```
dtpt.guid.data    Data
    GUID Data
dtpt.guid.length  Length
    Unsigned 32-bit integer
    GUID Length
dtpt.handle       Handle
    Unsigned 64-bit integer
    Lookup handle
dtpt.lpszComment  lpszComment
    Unsigned 32-bit integer
    lpszComment field in WSAQUERYSET
dtpt.message_type Message Type
    Unsigned 8-bit integer
    Packet Message Type
dtpt.ns_provider_id NS Provider ID
    NS Provider ID
dtpt.payload_size Payload Size
    Unsigned 32-bit integer
    Payload Size of the following packet containing a serialized WSAQUERYSET
dtpt.protocol.family Family
    Unsigned 32-bit integer
    Protocol Family
dtpt.protocol.protocol Protocol
    Unsigned 32-bit integer
    Protocol Protocol
dtpt.protocols.length Length of Protocols
    Unsigned 32-bit integer
    Length of Protocols
dtpt.protocols.number Number of Protocols
    Unsigned 32-bit integer
    Number of Protocols
dtpt.query_string Query String
    String
    Query String
dtpt.queryset.dwNameSpace dwNameSpace
    Unsigned 32-bit integer
    dwNameSpace field in WSAQUERYSE
dtpt.queryset.dwNumberOfCsAddrs dwNumberOfCsAddrs
    Unsigned 32-bit integer
    dwNumberOfCsAddrs field in WSAQUERYSET
dtpt.queryset.dwNumberOfProtocols dwNumberOfProtocols
    Unsigned 32-bit integer
    dwNumberOfProtocols field in WSAQUERYSET
dtpt.queryset.dwOutputFlags dwOutputFlags
    Unsigned 32-bit integer
    dwOutputFlags field in WSAQUERYSET
```

```
dtpt.queryset.dwSize  dwSize
    Unsigned 32-bit integer
    dwSize field in WSAQUERYSET

dtpt.queryset.lpBlob  lpBlob
    Unsigned 32-bit integer
    lpBlob field in WSAQUERYSET

dtpt.queryset.lpNSProviderId  lpNSProviderId
    Unsigned 32-bit integer
    lpNSProviderId field in WSAQUERYSET

dtpt.queryset.lpServiceClassId  lpServiceClassId
    Unsigned 32-bit integer
    lpServiceClassId in the WSAQUERYSET

dtpt.queryset.lpVersion  lpVersion
    Unsigned 32-bit integer
    lpVersion in WSAQUERYSET

dtpt.queryset.lpapfpProtocols  lpapfpProtocols
    Unsigned 32-bit integer
    lpapfpProtocols field in WSAQUERYSET

dtpt.queryset.lpcsabuffer  lpcsabuffer
    Unsigned 32-bit integer
    lpcsabuffer field in WSAQUERYSET

dtpt.queryset.lpszContext  lpszContext
    Unsigned 32-bit integer
    lpszContext field in WSAQUERYSET

dtpt.queryset.lpszQueryString  lpszQueryString
    Unsigned 32-bit integer
    lpszQueryString field in WSAQUERYSET

dtpt.queryset.lpszServiceInstanceName  lpszServiceInstanceName
    Unsigned 32-bit integer
    lpszServiceInstanceName field in WSAQUERYSET

dtpt.queryset_size  QuerySet Size
    Unsigned 32-bit integer
    Size of the binary WSAQUERYSET

dtpt.service_class_id  Service Class ID
    Service Class ID

dtpt.service_instance_name  Service Instance Name
    String
    Service Instance Name

dtpt.sockaddr.address  Address
    IPv4 address
    Socket Address Address

dtpt.sockaddr.family  Family
    Unsigned 16-bit integer
    Socket Address Family

dtpt.sockaddr.length  Length
    Unsigned 16-bit integer
    Socket Address Length
```

```
dtpt.sockaddr.port  Port
    Unsigned 16-bit integer
    Socket Address Port

dtpt.version  Version
    Unsigned 8-bit integer
    Protocol Version

dtpt.wstring.data  Data
    String
    String Data

dtpt.wstring.length  Length
    Unsigned 32-bit integer
    String Length
```

**Diameter 3GPP (diameter3gpp)**

```
diameter.3gpp.ipaddr  IPv4 Address
    IPv4 address
    IPv4 Address

diameter.3gpp.mbms_required_qos_prio  Allocation/Retention Priority
    Unsigned 8-bit integer
    Allocation/Retention Priority

diameter.3gpp.mbms_service_id  MBMS Service ID
    Unsigned 24-bit integer
    MBMS Service ID

diameter.3gpp.tmgi  TMGI
    Byte array
    TMGI
```

**Diameter Protocol (diameter)**

```
diameter.3GPP-IMEISV  3GPP-IMEISV
    Byte array
    vendor=10415 code=20

diameter.3GPP-IMSI  3GPP-IMSI

  Delivery Time
```

dmp.direct\_addr Direct Address  
Unsigned 8-bit integer  
Direct Address

dmp.direct\_addr1 Direct Address (bits 6-0)  
Unsigned 8-bit integer  
Direct Address (bits 6-0)

dmp.direct\_addr2 Direct Address (bits 12-7)  
Unsigned 8-bit integer  
Direct Address (bits 12-7)

dmp.direct\_addr3 Direct Address (bits 18-13)  
Unsigned 8-bit integer  
Direct Address (bits 18-13)

dmp.dl\_expansion\_prohib DL expansion prohibited  
Boolean  
DL expansion prohibited

dmp.dr Delivery Report  
No value  
Delivery Report

dmp.dtg DTG  
Unsigned 8-bit integer  
DTG

dmp.dtg.sign DTG in the  
Boolean  
Sign

dmp.dtg.val DTG Value  
Unsigned 8-bit integer  
DTG Value

dmp.envelope Envelope  
No value  
Envelope

dmp.envelope\_flags Flags  
Unsigned 8-bit integer  
Envelope Flags

dmp.expiry\_time Expiry Time  
Unsigned 8-bit integer  
Expiry Time

dmp.expiry\_time\_val Expiry Time Value  
Unsigned 8-bit integer  
Expiry Time Value

dmp.ext\_rec\_count Extended Recipient Count  
Unsigned 16-bit integer  
Extended Recipient Count

dmp.heading\_flags Heading Flags  
No value  
Heading Flags

dmp.hop\_count Hop Count  
Unsigned 8-bit integer  
Hop Count

dmp.id DMP Identifier  
Unsigned 16-bit integer  
DMP identifier

dmp.importance Importance  
Unsigned 8-bit integer  
Importance

dmp.info\_present Info Present  
Boolean  
Info Present

dmp.message Message Content  
No value  
Message Content

dmp.mission\_pol\_id Mission Policy Identifier  
Unsigned 8-bit integer  
Mission Policy Identifier

dmp.msg\_id Message Identifier  
Unsigned 16-bit integer  
Message identifier

dmp.msg\_type Message type  
Unsigned 8-bit integer  
Message type

dmp.nat\_pol\_id National Policy Identifier  
Unsigned 8-bit integer  
National Policy Identifier

dmp.ndr Non-Delivery Report  
No value  
Non-Delivery Report

dmp.not\_req Notification Request  
Unsigned 8-bit integer  
Notification Request

dmp.notif\_discard\_reason Discard Reason  
Unsigned 8-bit integer  
Discard Reason

dmp.notif\_non\_rec\_reason Non-Receipt Reason

           Receipt time

dmp.receipt_time_val Receipt Time Value
           Unsigned 8-bit integer
           Receipt Time Value

dmp.recip_reassign_prohib Recipient reassign prohibited
           Boolean
           Recipient Reassign prohibited
```

```
dmp.recipient  Recipient Number
  No value
  Recipient

dmp.rep_rec    Report Request
  Unsigned 8-bit integer
  Report Request

dmp.report     Report Content
  No value
  Report Content

dmp.report_diagnostic Diagnostic (X.411)
  Unsigned 8-bit integer
  Diagnostic

dmp.report_reason Reason (X.411)
  Unsigned 8-bit integer
  Reason

dmp.report_type Report Type
  Boolean
  Report Type

dmp.reporting_name Reporting Name Number
  No value
  Reporting Name

dmp.reserved   Reserved
  Unsigned 8-bit integer
  Reserved

dmp.rn        Receipt Notification (RN)
  No value
  Receipt Notification (RN)

dmp.sec_cat   Security Categories
  Unsigned 8-bit integer
  Security Categories

dmp.sec_cat.bit0 Bit 0
  Boolean
  Bit 0

dmp.sec_cat.bit1 Bit 1
  Boolean
  Bit 1

dmp.sec_cat.bit2 Bit 2
  Boolean
  Bit 2

dmp.sec_cat.bit3 Bit 3
  Boolean
  Bit 3

dmp.sec_cat.bit4 Bit 4
  Boolean
  Bit 4

dmp.sec_cat.bit5 Bit 5
  Boolean
  Bit 5
```

```
dmp.sec_cat.bit6  Bit 6
  Boolean
  Bit 6

dmp.sec_cat.bit7  Bit 7
  Boolean
  Bit 7

dmp.sec_cat.cl    Clear
  Boolean
  Clear

dmp.sec_cat.cs    Crypto Security
  Boolean
  Crypto Security

dmp.sec_cat.ex    Exclusive
  Boolean
  Exclusive

dmp.sec_cat.ne    National Eyes Only
  Boolean
  National Eyes Only

dmp.sec_class     Security Classification
  Unsigned 8-bit integer
  Security Classification

dmp.sec_pol       Security Policy
  Unsigned 8-bit integer
  Security Policy

dmp.sic           SIC
  String
  SIC

dmp.sic_bitmap    Length Bitmap (0 = 3 bytes, 1 = 4-8 bytes)
  Unsigned 8-bit integer
  SIC Length Bitmap

dmp.sic_bits      Bit 7-4
  Unsigned 8-bit integer
  SIC Bit 7-4, Characters [A-Z0-9] only

dmp.sic_bits_any  Bit 7-4
  Unsigned 8-bit integer
  SIC Bit 7-4, Any valid characters

dmp.sic_key       SICs
  No value
  SIC Content

dmp.sic_key.chars Valid Characters
  Boolean
  SIC Valid Characters

dmp.sic_key.num   Number of SICs
  Unsigned 8-bit integer
  Number of SICs

dmp.sic_key.type  Type
  Unsigned 8-bit integer
  SIC Content Type
```

```
dmp.sic_key.values  Content Byte
  Unsigned 8-bit integer
  SIC Content Byte

dmp.subj_id  Subject Message Identifier
  Unsigned 16-bit integer
  Subject Message Identifier

dmp.subject  Subject
  String
  Subject

dmp.subject_discarded  Subject discarded
  Boolean
  Subject discarded

dmp.subm_time  Submission Time
  Unsigned 16-bit integer
  Submission Time

dmp.subm_time_value  Submission Time Value
  Unsigned 16-bit integer
  Submission Time Value

dmp.suppl_info  Supplementary Information
  String
  Supplementary Information

dmp.suppl_info_len  Supplementary Information
  Unsigned 8-bit integer
  Supplementary Information Length

dmp.time_diff  Time Difference
  Unsigned 8-bit integer
  Time Difference

dmp.time_diff_present  Time Diff
  Boolean
  Time Diff Present

dmp.time_diff_value  Time Difference Value
  Unsigned 8-bit integer
  Time Difference Value

dmp.version  Protocol Version
  Unsigned 8-bit integer
  Protocol Version
```

#### **DirectPlay Protocol (dplay)**

```
dplay.command  DirectPlay command
  Unsigned 16-bit integer

dplay.command_2  DirectPlay second command
  Unsigned 16-bit integer

dplay.dialect.version  DirectPlay dialect version
  Unsigned 16-bit integer

dplay.dialect.version_2  DirectPlay second dialect version
  Unsigned 16-bit integer
```

```
dplay.dplay_str  DirectPlay action string
String

dplay.dplay_str_2  DirectPlay second action string
String

dplay.flags  DirectPlay session desc flags
Unsigned 32-bit integer

dplay.flags.acq_voice  acquire voice
Boolean
Acq Voice

dplay.flags.can_join  can join
Boolean
Can Join

dplay.flags.ignored  ignored
Boolean
Ignored

dplay.flags.migrate_host  migrate host flag
Boolean
Migrate Host

dplay.flags.no_create_players  no create players flag
Boolean
No Create Players

dplay.flags.no_player_updates  no player updates
Boolean
No Player Updates

dplay.flags.no_sess_desc  no session desc changes
Boolean
No Sess Desc Changes

dplay.flags.opt_latency  optimize for latency
Boolean
Opt Latency

dplay.flags.order  preserve order
Boolean
Order

dplay.flags.pass_req  password required
Boolean
Pass Req

dplay.flags.priv_sess  private session
Boolean
Priv Session

dplay.flags.reliable  use reliable protocol
Boolean
Reliable

dplay.flags.route  route via game host
Boolean
Route
```

```
dplay.flags.short_player_msg  short player message
    Boolean
    Short Player Msg

dplay.flags.srv_p_only  get server player only
    Boolean
    Svr Player Only

dplay.flags.unused  unused
    Boolean
    Unused

dplay.flags.use_auth  use authentication
    Boolean
    Use Auth

dplay.flags.use_ping  use ping
    Boolean
    Use Ping

dplay.game.guid  DirectPlay game GUID

dplay.instance.guid  DirectPlay instance guid

dplay.message.guid  Message GUID

dplay.multi.create_offset  Offset to PackedPlayer struct
    Unsigned 32-bit integer

dplay.multi.group_id  Group ID
    Byte array

dplay.multi.id_to  ID to
    Byte array

dplay.multi.password  Password
    String

dplay.multi.password_offset  Offset to password
    Unsigned 32-bit integer

dplay.multi.player_id  Player ID
    Byte array

dplay.ping.id_from  ID From
    Byte array

dplay.ping.tick_count  Tick Count
    Unsigned 32-bit integer

dplay.player_msg  DirectPlay Player to Player message
    Byte array

dplay.pp.dialect  PackedPlayer dialect version
    Unsigned 32-bit integer

dplay.pp.fixed_size  PackedPlayer fixed size
    Unsigned 32-bit integer

dplay.pp.flags  PackedPlayer flags
    Unsigned 32-bit integer

dplay.pp.flags.in_group  in group
    Boolean
```

```
dplay.pp.flags.nameserver  is name server
    Boolean
dplay.pp.flags.sending    sending player on local machine
    Boolean
dplay.pp.flags.sysplayer  is system player
    Boolean
dplay.pp.id               PackedPlayer ID
    Byte array
dplay.pp.long_name_len    PackedPlayer long name length
    Unsigned 32-bit integer
dplay.pp.parent_id       PackedPlayer parent ID
    Byte array
dplay.pp.player_count     PackedPlayer player count
    Unsigned 32-bit integer
dplay.pp.player_data      PackedPlayer player data
    Byte array
dplay.pp.player_data_size PackedPlayer player data size
    Unsigned 32-bit integer
dplay.pp.player_id       PackedPlayer player ID
    Byte array
dplay.pp.short_name       PackedPlayer short name
    String
dplay.pp.short_name_len   PackedPlayer short name length
    Unsigned 32-bit integer
dplay.pp.size             PackedPlayer size
    Unsigned 32-bit integer
dplay.pp.sp_data          PackedPlayer service provider data
    Byte array
dplay.pp.sp_data_size     PackedPlayer service provider data size
    Unsigned 32-bit integer
dplay.pp.sysplayer_id     PackedPlayer system player ID
    Byte array
dplay.pp.unknown_1       PackedPlayer unknown 1
    Byte array
dplay.saddr.af            DirectPlay s_addr_in address family
    Unsigned 16-bit integer
dplay.saddr.ip            DirectPlay s_addr_in ip address
    IPv4 address
dplay.saddr.padding       DirectPlay s_addr_in null padding
    Byte array
dplay.saddr.port          DirectPlay s_addr_in port
    Unsigned 16-bit integer
dplay.sd.capi             SecDesc CAPI provider ptr
    Byte array
```

```
dplay.sd.capi_type  SecDesc CAPI provider type
    Unsigned 32-bit integer
dplay.sd.enc_alg   SecDesc encryption algorithm
    Unsigned 32-bit integer
dplay.sd.flags    SecDesc flags
    Unsigned 32-bit integer
dplay.sd.size     SecDesc struct size
    Unsigned 32-bit integer
dplay.sd.sspi     SecDesc SSPI provider ptr
    Byte array
dplay.ssess_desc.curr_players  DirectPlay current players
    Unsigned 32-bit integer
dplay.ssess_desc.length  DirectPlay session desc length
    Unsigned 32-bit integer
dplay.ssess_desc.max_players  DirectPlay max players
    Unsigned 32-bit integer
dplay.ssess_desc.name_ptr  Session description name pointer placeholder
    Byte array
dplay.ssess_desc.pw_ptr   Session description password pointer placeholder
    Byte array
dplay.ssess_desc.res_1   Session description reserved 1
    Byte array
dplay.ssess_desc.res_2   Session description reserved 2
    Byte array
dplay.ssess_desc.user_1   Session description user defined 1
    Byte array
dplay.ssess_desc.user_2   Session description user defined 2
    Byte array
dplay.ssess_desc.user_3   Session description user defined 3
    Byte array
dplay.ssess_desc.user_4   Session description user defined 4
    Byte array
dplay.size           DirectPlay package size
    Unsigned 32-bit integer
dplay.spp.dialect    SuperPackedPlayer dialect version
    Unsigned 32-bit integer
dplay.spp.flags     SuperPackedPlayer flags
    Unsigned 32-bit integer
dplay.spp.flags.in_group  in group
    Boolean
dplay.spp.flags.nameserver  is name server
    Boolean
dplay.spp.flags.sending  sending player on local machine
    Boolean
```

```
dplay.spp.flags.sysplayer  is system player
    Boolean
dplay.spp.id               SuperPackedPlayer ID
    Byte array
dplay.spp.parent_id       SuperPackedPlayer parent ID
    Byte array
dplay.spp.pd_length       SuperPackedPlayer player data length
    Unsigned 32-bit integer
dplay.spp.pim             SuperPackedPlayer player info mask
    Unsigned 32-bit integer
dplay.spp.pim.long_name   SuperPackedPlayer have long name
    Unsigned 32-bit integer
dplay.spp.pim.parent_id   SuperPackedPlayer have parent ID
    Unsigned 32-bit integer
dplay.spp.pim.pd_length   SuperPackedPlayer player data length info
    Unsigned 32-bit integer
dplay.spp.pim.player_count SuperPackedPlayer player count info
    Unsigned 32-bit integer
dplay.spp.pim.short_name  SuperPackedPlayer have short name
    Unsigned 32-bit integer
dplay.spp.pim.shortcut_count SuperPackedPlayer shortcut count info
    Unsigned 32-bit integer
dplay.spp.pim.sp_length   SuperPackedPlayer service provider length info
    Unsigned 32-bit integer
dplay.spp.player_count    SuperPackedPlayer player count
    Unsigned 32-bit integer
dplay.spp.player_data     SuperPackedPlayer player data
    Byte array
dplay.spp.player_id       SuperPackedPlayer player ID
    Byte array
dplay.spp.short_name      SuperPackedPlayer short name
    String
dplay.spp.shortcut_count  SuperPackedPlayer shortcut count
    Unsigned 32-bit integer
dplay.spp.shortcut_id     SuperPackedPlayer shortcut ID
    Byte array
dplay.spp.size            SuperPackedPlayer size
    Unsigned 32-bit integer
dplay.spp.sp_data         SuperPackedPlayer service provider data
    Byte array
dplay.spp.sp_data_length  SuperPackedPlayer service provider data length
    Unsigned 32-bit integer
dplay.spp.sysplayer_id    SuperPackedPlayer system player ID
    Byte array
```

```
dplay.token    DirectPlay token
               Unsigned 32-bit integer

dplay.type02.all    Enumerate all sessions
                   Boolean
                   All

dplay.type02.flags    Enum Session flags
                     Unsigned 32-bit integer

dplay.type02.game.guid    DirectPlay game GUID

    Boolean
    Bad DVMRP Checksum

dvmrp.command  Command
    Unsigned 8-bit integer
    DVMRP V1 Command

dvmrp.commands  Commands
    No value
    DVMRP V1 Commands

dvmrp.count  Count
    Unsigned 8-bit integer
    Count

dvmrp.daddr  Dest Addr
    IPv4 address
    DVMRP Destination Address

dvmrp.dest_unreach  Destination Unreachable
    Boolean
    Destination Unreachable

dvmrp.flag.disabled  Disabled
    Boolean
    Administrative status down

dvmrp.flag.down  Down
    Boolean
    Operational status down

dvmrp.flag.leaf  Leaf
    Boolean
    No downstream neighbors on interface

dvmrp.flag.querier  Querier
    Boolean
    Querier for interface

dvmrp.flag.srcroute  Source Route
    Boolean
    Tunnel uses IP source routing

dvmrp.flag.tunnel  Tunnel
    Boolean
    Neighbor reached via tunnel

dvmrp.flags  Flags
    No value
    DVMRP Interface Flags

dvmrp.genid  Generation ID
    Unsigned 32-bit integer
    DVMRP Generation ID
```

```
dvmrp.hold    Hold Time
              Unsigned 32-bit integer
              DVMRP Hold Time in seconds

dvmrp.infinity Infinity
              Unsigned 8-bit integer
              DVMRP Infinity

dvmrp.lifetime Prune lifetime
              Unsigned 32-bit integer
              DVMRP Prune Lifetime

dvmrp.local   Local Addr
              IPv4 address
              DVMRP Local Address

dvmrp.maddr   Multicast Addr
              IPv4 address
              DVMRP Multicast Address

dvmrp.maj_ver Major Version
              Unsigned 8-bit integer
              DVMRP Major Version

dvmrp.metric  Metric
              Unsigned 8-bit integer
              DVMRP Metric

dvmrp.min_ver Minor Version
              Unsigned 8-bit integer
              DVMRP Minor Version

dvmrp.ncount  Neighbor Count
              Unsigned 8-bit integer
              DVMRP Neighbor Count

dvmrp.neighbor Neighbor Addr
              IPv4 address
              DVMRP Neighbor Address

dvmrp.netmask Netmask
              IPv4 address
              DVMRP Netmask

dvmrp.route   Route
              No value
              DVMRP V3 Route Report

dvmrp.saddr   Source Addr
              IPv4 address
              DVMRP Source Address

dvmrp.split_horiz Split Horizon
              Boolean
              Split Horizon concealed route

dvmrp.threshold Threshold
              Unsigned 8-bit integer
              DVMRP Interface Threshold

dvmrp.type    Type
              Unsigned 8-bit integer
              DVMRP Packet Type
```

```
dvmrp.v1.code Code
    Unsigned 8-bit integer
    DVMRP Packet Code

dvmrp.v3.code Code
    Unsigned 8-bit integer
    DVMRP Packet Code

dvmrp.version DVMRP Version
    Unsigned 8-bit integer
    DVMRP Version
```

**Distcc Distributed Compiler (distcc)**

```
distcc.argc ARGV
    Unsigned 32-bit integer
    Number of arguments

distcc.argv ARGV
    String
    ARGV argument

distcc.doti_source Source
    String
    DOTI Preprocessed Source File (.i)

distcc.doto_object Object
    Byte array
    DOTO Compiled object file (.o)

distcc.serr SERR
    String
    STDERR output

distcc.sout SOUT
    String
    STDOUT output

distcc.status Status
    Unsigned 32-bit integer
    Unix wait status for command completion

distcc.version DISTCC Version
    Unsigned 32-bit integer
    DISTCC Version
```

**Distributed Checksum Clearinghouse protocol (dcc)**

```
dcc.adminop Admin Op
    Unsigned 8-bit integer
    Admin Op

dcc.adminval Admin Value
    Unsigned 32-bit integer
    Admin Value

dcc.brand Server Brand
    String
    Server Brand
```

```
dcc.checksum.length Length
    Unsigned 8-bit integer
    Checksum Length

dcc.checksum.sum Sum
    Byte array
    Checksum

dcc.checksum.type Type
    Unsigned 8-bit integer
    Checksum Type

dcc.clientid Client ID
    Unsigned 32-bit integer
    Client ID

dcc.date Date
    Date/Time stamp
    Date

dcc.floodop Flood Control Operation
    Unsigned 32-bit integer
    Flood Control Operation

dcc.len Packet Length
    Unsigned 16-bit integer
    Packet Length

dcc.max_pkt_vers Maximum Packet Version
    Unsigned 8-bit integer
    Maximum Packet Version

dcc.op Operation Type
    Unsigned 8-bit integer
    Operation Type

dcc.opnums.host Host
    Unsigned 32-bit integer
    Host

dcc.opnums.pid Process ID
    Unsigned 32-bit integer
    Process ID

dcc.opnums.report Report
    Unsigned 32-bit integer
    Report

dcc.opnums.retrans Retransmission
    Unsigned 32-bit integer
    Retransmission

dcc.pkt_vers Packet Version
    Unsigned 16-bit integer
    Packet Version

dcc.qdelay_ms Client Delay
    Unsigned 16-bit integer
    Client Delay

dcc.signature Signature
    Byte array
    Signature
```

```
dcc.target Target
    Unsigned 32-bit integer
    Target

dcc.trace Trace Bits
    Unsigned 32-bit integer
    Trace Bits

dcc.trace.admin Admin Requests
    Boolean
    Admin Requests

dcc.trace.anon Anonymous Requests
    Boolean
    Anonymous Requests

dcc.trace.client Authenticated Client Requests
    Boolean
    Authenticated Client Requests

dcc.trace.flood Input/Output Flooding
    Boolean
    Input/Output Flooding

dcc.trace.query Queries and Reports
    Boolean
    Queries and Reports

dcc.trace.ridc RID Cache Messages
    Boolean
    RID Cache Messages

dcc.trace.rlim Rate-Limited Requests
    Boolean
    Rate-Limited Requests
```

#### **Domain Name Service (dns)**

dns.count.add\_rr Additional RRs  
Unsigned 16-bit integer  
Number of additional records in packet

dns.count.answers Answer RRs  
Unsigned 16-bit integer  
Number of answers in packet

dns.count.auth\_rr Authority RRs  
Unsigned 16-bit integer  
Number of authoritative records in packet

dns.count.prerequisites Prerequisites  
Unsigned 16-bit integer  
Number of prerequisites in packet

```
dns.count.queries  Questions
    Unsigned 16-bit integer
    Number of queries in packet

dns.count.updates  Updates
    Unsigned 16-bit integer
    Number of updates records in packet

dns.count.zones    Zones
    Unsigned 16-bit integer
    Number of zones in packet

dns.flags  Flags
    Unsigned 16-bit integer

dns.flags.authenticated  Answer authenticated
    Boolean
    Was the reply data authenticated by the server?

dns.flags.authoritative  Authoritative
    Boolean
    Is the server is an authority for the domain?

dns.flags.checkdisable  Non-authenticated data OK
    Boolean
    Is non-authenticated data acceptable?

dns.flags.opcode  Opcode
    Unsigned 16-bit integer
    Operation code

dns.flags.rcode  Reply code
    Unsigned 16-bit integer
    Reply code

dns.flags.recavail  Recursion available
    Boolean
    Can the server do recursive queries?

dns.flags.recdesired  Recursion desired
    Boolean
    Do query recursively?

dns.flags.response  Response
    Boolean
    Is the message a response?

dns.flags.truncated  Truncated
    Boolean
    Is the message truncated?

dns.flags.z  Z
    Boolean
    Z flag

dns.id  Transaction ID
    Unsigned 16-bit integer
    Identification of transaction

dns.length  Length
    Unsigned 16-bit integer
    Length of DNS-over-TCP request or response
```

```
dns.qry.class  Class
  Unsigned 16-bit integer
  Query Class

dns.qry.name  Name
  String
  Query Name

dns.qry.qu    "QU" question
  Boolean
  QU flag

dns.qry.type  Type
  Unsigned 16-bit integer
  Query Type

dns.resp.cache_flush  Cache flush
  Boolean
  Cache flush flag

dns.resp.class  Class
  Unsigned 16-bit integer
  Response Class

dns.resp.len  Data length
  Unsigned 32-bit integer
  Response Length

dns.resp.name  Name
  String
  Response Name

dns.resp.ttl  Time to live
  Unsigned 32-bit integer
  Response TTL

dns.resp.type  Type
  Unsigned 16-bit integer
  Response Type

dns.response_in  Response In
  Frame number
  The response to this DNS query is in this frame

dns.response_to  Request In
  Frame number
  This is a response to the DNS query in this frame

dns.time  Time
  Time duration
  The time between the Query and the Response

dns.tsig.algorithm_name  Algorithm Name
  String
  Name of algorithm used for the MAC

dns.tsig.error  Error
  Unsigned 16-bit integer
  Expanded RCODE for TSIG

dns.tsig.fudge  Fudge
  Unsigned 16-bit integer
  Number of bytes for the MAC
```

```
dns.tsig.mac    MAC
               No value
               MAC

dns.tsig.mac_size  MAC Size
               Unsigned 16-bit integer
               Number of bytes for the MAC

dns.tsig.original_id  Original Id
               Unsigned 16-bit integer
               Original Id

dns.tsig.other_data  Other Data
               Byte array
               Other Data

dns.tsig.other_len  Other Len
               Unsigned 16-bit integer
               Number of bytes for Other Data
```

**Dublin Core Metadata (DC) (dc)**

```
dc.contributor  contributor
               String

dc.coverage    coverage
               String

dc.creator     creator
               String

dc.date       date
               String

dc.dc         dc
               String

dc.description  description
               String

dc.format     format
               String

dc.identifier  identifier
               String

dc.language   language
               String

dc.publisher  publisher
               String

dc.relation   relation
               String

dc.rights    rights
               String

dc.source    source
               String

dc.type type  
String

#### **Dynamic DNS Tools Protocol (ddtp)**

ddtp.encrypt Encryption  
Unsigned 32-bit integer  
Encryption type

ddtp.hostid Hostid  
Unsigned 32-bit integer  
Host ID

ddtp.ipaddr IP address  
IPv4 address  
IP address

ddtp.msgtype Message type  
Unsigned 32-bit integer  
Message Type

ddtp.opcode Opcode  
Unsigned 32-bit integer  
Update query opcode

ddtp.status Status  
Unsigned 32-bit integer  
Update reply status

ddtp.version Version  
Unsigned 32-bit integer  
Version

#### **Dynamic Trunking Protocol (dtp)**

dtp.neighbor Neighbor  
6-byte Hardware (MAC) Address  
MAC Address of neighbor

dtp.tlv\_len Length  
Unsigned 16-bit integer

dtp.tlv\_type Type  
Unsigned 16-bit integer

dtp.version Version  
Unsigned 8-bit integer

#### **EFS (pidl) (efs)**

efs.EFS\_CERTIFICATE\_BLOB.cbData Cbdata  
Unsigned 32-bit integer

efs.EFS\_CERTIFICATE\_BLOB.dwCertEncodingType Dwcertencodingtype  
Unsigned 32-bit integer

efs.EFS\_CERTIFICATE\_BLOB.pbData Pbdata  
Unsigned 8-bit integer

```
efs.EFS_HASH_BLOB.cbData  Cbdata
    Unsigned 32-bit integer
efs.EFS_HASH_BLOB.pbData  Pbdata
    Unsigned 8-bit integer
efs.ENCRYPTION_CERTIFICATE.TotalLength  Totallength
    Unsigned 32-bit integer
efs.ENCRYPTION_CERTIFICATE.pCertBlob  Pcertblob
    No value
efs.ENCRYPTION_CERTIFICATE.pUserSid  Pusersid
    No value
efs.ENCRYPTION_CERTIFICATE_HASH.cbTotalLength  Cbtotallength
    Unsigned 32-bit integer
efs.ENCRYPTION_CERTIFICATE_HASH.lpDisplayInformation  Lpdisplayinformation
    String
efs.ENCRYPTION_CERTIFICATE_HASH.pHash  Phash
    No value
efs.ENCRYPTION_CERTIFICATE_HASH.pUserSid  Pusersid
    No value
efs.ENCRYPTION_CERTIFICATE_HASH_LIST.nCert_Hash  Ncert Hash
    Unsigned 32-bit integer
efs.ENCRYPTION_CERTIFICATE_HASH_LIST.pUsers  Pusers
    No value
efs.EfsRpcAddUsersToFile.FileName  Filename
    String
efs.EfsRpcCloseRaw.pvContext  Pvcontext

efs.EfsRpcDecryptFileSrv.Reserved  Reserved
    Unsigned 32-bit integer
efs.EfsRpcEncryptFileSrv.FileName  Filename
    String
efs.EfsRpcOpenFileRaw.FileName  Filename
    String
efs.EfsRpcOpenFileRaw.Flags  Flags
    Unsigned 32-bit integer
efs.EfsRpcOpenFileRaw.pvContext  Pvcontext
    Byte array
efs.EfsRpcQueryRecoveryAgents.FileName  Filename
    String
efs.EfsRpcQueryRecoveryAgents.pRecoveryAgents  Precoveryagents
    No value
efs.EfsRpcQueryUsersOnFile.FileName  Filename
    String
```

```
efs.EfsRpcQueryUsersOnFile.pUsers  Pusers
    No value
efs.EfsRpcReadFileRaw.pvContext  Pvcontext
    Byte array
efs.EfsRpcRemoveUsersFromFile.FileName  Filename
    String
efs.EfsRpcSetFileEncryptionKey.pEncryptionCertificate  Pencryptioncertificate
    No value
efs.EfsRpcWriteFileRaw.pvContext  Pvcontext
    Byte array
efs.opnum  Operation
    Unsigned 16-bit integer
efs.werror  Windows Error
    Unsigned 32-bit integer
```

**ENEALINX (linx)**

```
linx.ackno  ACK Number
    Unsigned 32-bit integer
    ACK Number
linx.ackreq  ACK-request
    Unsigned 32-bit integer
    ACK-request
linx.bundle  Bundle
    Unsigned 32-bit integer
    Bundle
linx.cmd  Command
    Unsigned 32-bit integer
    Command
linx.connection  Connection
    Unsigned 32-bit integer
    Connection
linx.destmaddr_ether  Destination
    6-byte Hardware (MAC) Address
    Destination Media Address (ethernet)
linx.dstaddr  Receiver Address
    Unsigned 32-bit integer
    Receiver Address
linx.dstaddr32  Receiver Address
    Unsigned 32-bit integer
    Receiver Address
linx.feats_neg_str  Feature Negotiation String
    String
    Feature Negotiation String
linx.fragno  Fragment Number
    Unsigned 32-bit integer
    Fragment Number
```

```
linx.fragno2  Fragment Number
             Unsigned 32-bit integer
             Fragment Number

linx.morefr2  More Fragments

  Unsigned 16-bit integer
  Etheric CIC
etheric.event_ind  Event indicator
  Unsigned 8-bit integer
etheric.event_presentation_restr_ind  Event presentation restricted indicator
  Boolean
etheric.forw_call_isdn_access_indicator  ISDN access indicator
  Boolean
etheric.inband_information_ind  In-band information indicator
  Boolean
etheric.inn_indicator  INN indicator
  Boolean
etheric.isdn_odd_even_indicator  Odd/even indicator
  Boolean
etheric.mandatory_variable_parameter_pointer  Pointer to Parameter
  Unsigned 8-bit integer
etheric.message.length  Message length
  Unsigned 8-bit integer
  Etheric Message length
etheric.message.type  Message type
  Unsigned 8-bit integer
  Etheric message types
etheric.ni_indicator  NI indicator
  Boolean
etheric.numbering_plan_indicator  Numbering plan indicator
  Unsigned 8-bit integer
etheric.optional_parameter_part_pointer  Pointer to optional parameter part
  Unsigned 8-bit integer
etheric.parameter_length  Parameter Length
  Unsigned 8-bit integer
etheric.parameter_type  Parameter Type
  Unsigned 8-bit integer
etheric.protocol_version  Protocol version
  Unsigned 8-bit integer
  Etheric protocol version
etheric.screening_indicator  Screening indicator
  Unsigned 8-bit integer
etheric.transmission_medium_requirement  Transmission medium requirement
  Unsigned 8-bit integer
```

**Ethernet (eth)**

```

eth.addr  Address
          6-byte Hardware (MAC) Address
          Source or Destination Hardware Address

eth.dst  Destination
          6-byte Hardware (MAC) Address
          Destination Hardware Address

eth.ig  IG bit
        Boolean
        Specifies if this is an individual (unicast) or group (broadcast/multicast)

eth.len  Length
        Unsigned 16-bit integer

eth.lg  LG bit
        Boolean
        Specifies if this is a locally administered or globally unique (IEEE assigned)

eth.src  Source
          6-byte Hardware (MAC) Address
          Source Hardware Address

eth.trailer  Trailer
            Byte array
            Ethernet Trailer or Checksum

eth.type  Type
          Unsigned 16-bit integer

```

**Ethernet over IP (etherip)**

```

etherip.ver  Version
            Unsigned 8-bit integer

```

ff.trailer.time\_stamp Time Stamp  
Unsigned 64-bit integer

**FP (fp)**

fp.activation-cfn Activation CFN  
Unsigned 8-bit integer  
Activation Connection Frame Number

fp.cell-portion-id Cell Portion ID  
Unsigned 8-bit integer  
Cell Portion ID

fp.cfn CFN  
Unsigned 8-bit integer  
Connection Frame Number

fp.cfn-control CFN control  
Unsigned 8-bit integer  
Connection Frame Number Control

fp.channel-type Channel Type  
Unsigned 8-bit integer  
Channel Type

fp.channel-with-zero-tbs No TBs for channel  
Unsigned 32-bit integer  
Channel with 0 TBs

fp.cmch-pi CmCH-PI  
Unsigned 8-bit integer  
Common Transport Channel Priority Indicator

fp.code-number Code number  
Unsigned 8-bit integer  
Code number

fp.common.control.frame-type Control Frame Type  
Unsigned 8-bit integer  
Common Control Frame Type

fp.common.control.rx-timing-deviation Rx Timing Deviation  
Unsigned 8-bit integer  
Common Rx Timing Deviation

fp.congestion-status Congestion Status  
Unsigned 8-bit integer  
Congestion Status

fp.cpch.tfi TFI  
Unsigned 8-bit integer  
CPCH Transport Format Indicator

fp.crci CRCI  
Unsigned 8-bit integer  
CRC correctness indicator

fp.crcis CRCIs  
Byte array  
CRC Indicators for uplink TBs

```
fp.data Data
  Byte array
  Data

fp.dch.control.frame-type Control Frame Type
  Unsigned 8-bit integer
  DCH Control Frame Type

fp.dch.control.rx-timing-deviation Rx Timing Deviation
  Unsigned 8-bit integer
  DCH Rx Timing Deviation

fp.dch.quality-estimate Quality Estimate
  Unsigned 8-bit integer
  Quality Estimate

fp.direction Direction
  Unsigned 8-bit integer
  Link direction

fp.dpc-mode DPC Mode
  Unsigned 8-bit integer
  DPC Mode to be applied in the uplink

fp.edch-data-padding Padding
  Unsigned 8-bit integer
  E-DCH padding before PDU

fp.edch-tsn TSN
  Unsigned 8-bit integer
  E-DCH Transmission Sequence Number

fp.edch.ddi DDI
  Unsigned 8-bit integer
  E-DCH Data Description Indicator

fp.edch.fsn FSN
  Unsigned 8-bit integer
  E-DCH Frame Sequence Number

fp.edch.header-crc E-DCH Header CRC
  Unsigned 16-bit integer
  E-DCH Header CRC

fp.edch.mac-es-pdu MAC-es PDU
  No value
  MAC-es PDU

fp.edch.no-of-harq-retransmissions No of HARQ Retransmissions
  Unsigned 8-bit integer
  E-DCH Number of HARQ retransmissions

fp.edch.no-of-subframes No of subframes
  Unsigned 8-bit integer
  E-DCH Number of subframes

fp.edch.number-of-mac-d-pdus Number of Mac-d PDUs
  Unsigned 8-bit integer
  Number of Mac-d PDUs

fp.edch.number-of-mac-es-pdus Number of Mac-es PDUs
  Unsigned 8-bit integer
  Number of Mac-es PDUs
```

```
fp.edch.subframe  Subframe
  String
  EDCH Subframe

fp.edch.subframe-header  Subframe header
  String
  EDCH Subframe header

fp.edch.subframe-number  Subframe number
  Unsigned 8-bit integer
  E-DCH Subframe number

fp.fach.tfi  TFI
  Unsigned 8-bit integer
  FACH Transport Format Indicator

fp.ft  Frame Type
  Unsigned 8-bit integer
  Frame Type

fp.header-crc  Header CRC
  Unsigned 8-bit integer
  Header CRC

fp.hsdSCH-calculated-rate  Calculated rate allocation (bps)
  Unsigned 32-bit integer
  Calculated rate RNC is allowed to send in bps

fp.hsdSCH-credits  HS-DSCH Credits
  Unsigned 16-bit integer
  HS-DSCH Credits

fp.hsdSCH-data-padding  Padding
  Unsigned 8-bit integer
  HS-DSCH Repetition Period in milliseconds

fp.hsdSCH-interval  HS-DSCH Interval in milliseconds
  Unsigned 8-bit integer
  HS-DSCH Interval in milliseconds

fp.hsdSCH-repetition-period  HS-DSCH Repetition Period
  Unsigned 8-bit integer
  HS-DSCH Repetition Period in milliseconds

fp.hsdSCH-unlimited-rate  Unlimited rate
  No value
  No restriction on rate at which data may be sent

fp.hsdSCH.drt  DRT
  Unsigned 8-bit integer
  Delay Reference Time

fp.hsdSCH.mac-d-pdu-len  MAC-d PDU Length
  Unsigned 16-bit integer
  MAC-d PDU Length in bits

fp.hsdSCH.max-macd-pdu-len  Max MAC-d PDU Length
  Unsigned 16-bit integer
  Maximum MAC-d PDU Length in bits

fp.hsdSCH.new-ie-flag  DRT IE present
  Unsigned 8-bit integer
  DRT IE present
```

```
fp.hsdSCH.new-ie-flags  New IEs flags
    String
    New IEs flags

fp.hsdSCH.new-ie-flags-byte  Another new IE flags byte
    Unsigned 8-bit integer
    Another new IE flagsbyte

fp.hsdSCH.num-of-pdu  Number of PDUs
    Unsigned 8-bit integer
    Number of PDUs in the payload

fp.mac-d-pdu  MAC-d PDU
    Byte array
    MAC-d PDU

fp.max-ue-tx-pow  MAX_UE_TX_POW
    Signed 8-bit integer
    Max UE TX POW (dBm)

fp.mc-info  MC info
    Unsigned 8-bit integer
    MC info

fp.multiple-rl-sets-indicator  Multiple RL sets indicator
    Unsigned 8-bit integer
    Multiple RL sets indicator

fp.payload-crc  Payload CRC
    Unsigned 16-bit integer
    Payload CRC

fp.pch.cfn  CFN (PCH)
    Unsigned 16-bit integer
    PCH Connection Frame Number

fp.pch.pi  Paging Indication
    Unsigned 8-bit integer
    Indicates if the PI Bitmap is present

fp.pch.pi-bitmap  Paging Indications bitmap
    No value
    Paging Indication bitmap

fp.pch.tfi  TFI
    Unsigned 8-bit integer
    PCH Transport Format Indicator

fp.pch.toa  ToA (PCH)
    Signed 24-bit integer
    PCH Time of Arrival

fp.pdsch-set-id  PDSCH Set Id
    Unsigned 8-bit integer
    A pointer to the PDSCH Set which shall be used to transmit

fp.power-offset  Power offset
    Power offset (in dB)

fp.propagation-delay  Propagation Delay
    Unsigned 8-bit integer
    Propagation Delay
```

fp.pusch-set-id PUSCH Set Id  
Unsigned 8-bit integer  
Identifies PUSCH Set from those configured in NodeB

fp.rach.new-ie-flag New IE present  
Unsigned 8-bit integer  
New IE present

fp.rach.new-ie-flags New IEs flags  
String  
New IEs flags

fp.rach.new-ie-flags-byte Another new IE flags byte  
Unsigned 8-bit integer  
Another new IE flags byte

fp.radio-interface-param.cfn-valid CFN valid  
Unsigned 16-bit integer  
CFN valid

fp.radio-interface-param.dpc-mode-valid DPC mode valid  
Unsigned 16-bit integer  
DPC mode valid

fp.radio-interface-param.max-ue-tx-pow-valid MAX\_UE\_TX\_POW valid  
Unsigned 16-bit integer  
MAX UE TX POW valid

fp.radio-interface-param.tpc-po-valid TPC PO valid  
Unsigned 16-bit integer  
TPC PO valid

fp.radio-interface\_param.rl-sets-indicator-valid RL sets indicator valid  
Unsigned 16-bit integer  
RI valid

fp.rx-sync-ul-timing-deviation Received SYNC UL Timing Deviation  
Unsigned 8-bit integer  
Received SYNC UL Timing Deviation

fp.spare-extension Spare Extension  
No value  
Spare Extension

fp.spreading-factor Spreading factor  
Unsigned 8-bit integer  
Spreading factor

fp.t1 T1  
Unsigned 24-bit integer  
RNC frame number indicating time it sends frame

fp.t2 T2  
Unsigned 24-bit integer  
NodeB frame number indicating time it received DL Sync

fp.t3 T3  
Unsigned 24-bit integer  
NodeB frame number indicating time it sends frame

fp.tb TB  
Byte array  
Transport Block

```
fp.tfi TFI
    Unsigned 8-bit integer
    Transport Format Indicator

fp.timing-advance Timing advance
    Unsigned 8-bit integer
    Timing advance in chips

fp.tpc-po TPC PO
    Unsigned 8-bit integer
    TPC PO

fp.transmit-power-level Transmit Power Level
    Transmit Power Level (dB)

fp.ul-sir-target UL_SIR_TARGET
    Value (in dB) of the SIR target to be used by the UL inner loop power control

fp.usch.tfi TFI
    Unsigned 8-bit integer
    USCH Transport Format Indicator

fp.user-buffer-size User buffer size
    Unsigned 16-bit integer
    User buffer size in octets
```

    Unsigned 8-bit integer

sbccs.token  Token
    Unsigned 24-bit integer
```

**Fibre Channel over Ethernet (fcoe)**

```
fcoe.crc  CRC
    Unsigned 32-bit integer

fcoe.crc_bad  CRC bad
    Boolean
    True: CRC doesn't match packet content; False: matches or not checked.

fcoe.crc_good  CRC good
    Boolean
    True: CRC matches packet content; False: doesn't match or not checked.

fcoe.eof  EOF
    Unsigned 8-bit integer

fcoe.len  Frame length
    Unsigned 32-bit integer
```

```
fcoe.sof  SOF
          Unsigned 8-bit integer
fcoe.ver  Version
          Unsigned 32-bit integer
```

### **File Mapping Protocol (fmp)**

```
fmp.Path  Mount Path
          String
          Mount Path
fmp.btime  Boot Time
          Date/Time stamp
          Machine Boot Time
fmp.btime.nsec  nano seconds
          Unsigned 32-bit integer
          Nano-seconds
fmp.btime.sec  seconds
          Unsigned 32-bit integer
          Seconds
fmp.cmd  Command
          Unsigned 32-bit integer
          command
fmp.cookie  Cookie
          Unsigned 32-bit integer
          Cookie for FMP_REQUEST_QUEUED Resp
fmp.cursor  number of volumes
          Unsigned 32-bit integer
          number of volumes
fmp.description  Error Description
          String
          Client Error Description
fmp.devSig  Signature DATA
          String
          Signature DATA
fmp.dsi.ds.dsList.dskSigLst_val.dse.dskSigEnt_val  Celerra Signature
          String
          Celerra Signature
fmp.dsi.ds.sig_offset  Sig Offset
          Unsigned 64-bit integer
          Sig Offset
fmp.eof  EOF
          Unsigned 64-bit integer
          End Of File
fmp.extentList_len  Extent List Length
          Unsigned 32-bit integer
          FMP Extent List Length
fmp.extentState  Extent State
          Unsigned 32-bit integer
          FMP Extent State
```

```
fmp.fileSize  File Size
  Unsigned 64-bit integer
  File Size

fmp.firstLogBlk  firstLogBlk
  Unsigned 32-bit integer
  First Logical File Block

fmp.firstLogBlk64  First Logical Block
  Unsigned 64-bit integer

fmp.fmpFHandle  FMP File Handle
  Byte array
  FMP File Handle

fmp.fsBlkSz  FS Block Size
  Unsigned 32-bit integer
  File System Block Size

fmp.fsID  File System ID
  Unsigned 32-bit integer
  File System ID

fmp.hostID  Host ID
  String
  Host ID

fmp.minBlks  Minimum Blocks to Grant
  Unsigned 32-bit integer
  Minimum Blocks to Grant

fmp.mount_path  Native Protocol: PATH
  String
  Absoulte path from the root on the server side

fmp.msgNum  Message Number
  Unsigned 32-bit integer
  FMP Message Number

fmp.nfsFHandle  NFS File Handle
  Byte array
  NFS File Handle

fmp.nfsv3Attr_fileid  File ID
  Unsigned 64-bit integer
  fileid

fmp.nfsv3Attr_fsid  fsid
  Unsigned 64-bit integer
  fsid

fmp.nfsv3Attr_gid  gid
  Unsigned 32-bit integer
  GID

fmp.nfsv3Attr_mod  Mode
  Unsigned 32-bit integer
  Mode

fmp.nfsv3Attr_nlink  nlink
  Unsigned 32-bit integer
  nlink
```

```
fmp.nfsv3Attr_rdev  rdev
  Unsigned 64-bit integer
  rdev

fmp.nfsv3Attr_type  Type
  Unsigned 32-bit integer
  NFSV3 Attr Type

fmp.nfsv3Attr_uid   uid
  Unsigned 32-bit integer
  UID

fmp.nfsv3Attr_used  Used
  Unsigned 64-bit integer
  used

fmp.notifyPort     Notify Port
  Unsigned 32-bit integer
  FMP Notify Port

fmp.numBlks        Number Blocks
  Unsigned 32-bit integer
  Number of Blocks

fmp.numBlksReq     Extent Length
  Unsigned 32-bit integer
  Extent Length

fmp.offset64       offset
  Unsigned 64-bit integer
  offset

fmp.os_build       OS Build
  Unsigned 32-bit integer
  OS Build

fmp.os_major       OS Major
  Unsigned 32-bit integer
  FMP OS Major

fmp.os_minor       OS Minor
  Unsigned 32-bit integer
  FMP OS Minor

fmp.os_name        OS Name
  String
  OS Name

fmp.os_patch       OS Path
  Unsigned 32-bit integer
  OS Path

fmp.plugin         Plug In Args
  Byte array
  FMP Plug In Arguments

fmp.pluginID       Plug In Cmd ID
  Byte array
  Plug In Command ID

fmp.procedure      Procedure
  Unsigned 32-bit integer
  Procedure
```

```
fmp.server_version_string  Server Version String
    String
    Server Version String
fmp.sessHandle  Session Handle
    Byte array
    FMP Session Handle
fmp.slice_size  size of the slice
    Unsigned 64-bit integer
    size of the slice
fmp.startOffset  Start Offset
    Unsigned 32-bit integer
    FMP Start Offset
fmp.start_offset64  Start offset
    Unsigned 64-bit integer
    Start Offset of extentEx
fmp.status  Status
    Unsigned 32-bit integer
    Reply Status
fmp.stripeSize  size of the stripe
    Unsigned 64-bit integer
    size of the stripe
fmp.topVolumeId  Top Volume ID
    Unsigned 32-bit integer
    Top Volume ID
fmp.volHandle  Volume Handle
    String
    FMP Volume Handle
fmp.volID  Volume ID inside DART
    Unsigned 32-bit integer
    FMP Volume ID inside DART
fmp.volume  Volume ID's
    Unsigned 32-bit integer
    FMP Volume ID's
```

#### **File Mapping Protocol Notify (fmp\_notify)**

```
fmp_notify.cookie  Cookie
    Unsigned 32-bit integer
    Cookie for FMP_REQUEST_QUEUED Resp
fmp_notify.fileSize  File Size
    Unsigned 64-bit integer
    File Size
fmp_notify.firstLogBlk  First Logical Block
    Unsigned 32-bit integer
    First Logical File Block
fmp_notify.fmpFHandle  FMP File Handle
    Byte array
    FMP File Handle
```

```

fmp_notify.fmp_notify_procedure Procedure
    Unsigned 32-bit integer
    Procedure

fmp_notify.fsBlkSz FS Block Size
    Unsigned 32-bit integer
    File System Block Size

fmp_notify.fsID File System ID
    Unsigned 32-bit integer
    File System ID

fmp_notify.handleListLength Number File Handles
    Unsigned 32-bit integer
    Number of File Handles

fmp_notify.msgNum Message Number
    Unsigned 32-bit integer
    FMP Message Number

fmp_notify.numBlksReq Number Blocks Requested
    Unsigned 32-bit integer
    Number Blocks Requested

fmp_notify.sessHandle Session Handle
    Byte array
    FMP Session Handle

fmp_notify.status Status
    Unsigned 32-bit integer
    Reply Status

```

### **File Transfer Protocol (FTP) (ftp)**

```

ftp.active.cip Active IP address
    IPv4 address
    Active FTP client IP address

ftp.active.nat Active IP NAT
    Boolean
    NAT is active

ftp.active.port Active port
    Unsigned 16-bit integer
    Active FTP client port

ftp.passive.ip Passive IP address
    IPv4 address
    Passive IP address (check NAT)

ftp.passive.nat Passive IP NAT
    Boolean
    NAT is active SIP and passive IP different

ftp.passive.port Passive port
    Unsigned 16-bit integer
    Passive FTP server port

ftp.request Request
    Boolean
    TRUE if FTP request

```

```
ftp.request.arg Request arg
String
ftp.request.command Request command
String
ftp.response Response
Boolean
TRUE if FTP response
ftp.response.arg Response arg
String
ftp.response.code Response code
Unsigned 32-bit integer
```

### **Financial Information eXchange Protocol (fix)**

```
fix.Account Account (1)
String
Account

gdsdb.fetchresponse.messages  Number of messages
    Unsigned 32-bit integer
gdsdb.fetchresponse.option  Option
    Unsigned 32-bit integer
gdsdb.fetchresponse.statement  Statement
    Unsigned 32-bit integer
gdsdb.fetchresponse.status  Status
    Unsigned 32-bit integer
gdsdb.info.bufferlength  Buffer length
    Unsigned 32-bit integer
gdsdb.info.items  Items
    String
gdsdb.info.object  Object
    Unsigned 32-bit integer
gdsdb.insert.messagenr  Message number
    Unsigned 32-bit integer
gdsdb.insert.messages  Number of messages
    Unsigned 32-bit integer
gdsdb.insert.statement  Statement
    Unsigned 32-bit integer
gdsdb.opcode  Opcode
    Unsigned 32-bit integer
gdsdb.openblob.id  ID
    Unsigned 64-bit integer
gdsdb.openblob2.bpb  Blob parameter block
    String
gdsdb.openblob2.transaction  Transaction
    Unsigned 32-bit integer
gdsdb.prepare.blr  BLR
    Unsigned 32-bit integer
gdsdb.prepare.bufferlen  Prepare, Bufferlength
    Unsigned 32-bit integer
```

```
gdsdb.prepare.dialect Prepare, Dialect
    Unsigned 32-bit integer
gdsdb.prepare.items Prepare, Information items
    Unsigned 32-bit integer
gdsdb.prepare.querystr Prepare, Query
    String
gdsdb.prepare.statement Prepare, Statement
    Unsigned 32-bit integer
gdsdb.prepare.transaction Prepare, Transaction
    Unsigned 32-bit integer
gdsdb.prepare2.message number Message number
    Unsigned 32-bit integer
gdsdb.prepare2.messages Number of messages
    Unsigned 32-bit integer
gdsdb.prepare2.outblr Output BLR
    Unsigned 32-bit integer
gdsdb.prepare2.outmsgnr Output Message number
    Unsigned 32-bit integer
gdsdb.prepare2.transaction Transaction
    Unsigned 32-bit integer
gdsdb.receive.direction Scroll direction
    Unsigned 32-bit integer
gdsdb.receive.incarnation Incarnation
    Unsigned 32-bit integer
gdsdb.receive.msgcount Message Count
    Unsigned 32-bit integer
gdsdb.receive.msgnr Message number
    Unsigned 32-bit integer
gdsdb.receive.offset Scroll offset
    Unsigned 32-bit integer
gdsdb.receive.request Request
    Unsigned 32-bit integer
gdsdb.receive.transation Transaction
    Unsigned 32-bit integer
gdsdb.reconnect.database Database
    Unsigned 32-bit integer
gdsdb.release.object Object
    Unsigned 32-bit integer
gdsdb.response.blobid Blob ID
    Unsigned 64-bit integer
gdsdb.response.data Data
    String
gdsdb.response.object Response object
    Unsigned 32-bit integer
```

```
gdsdb.response.status  Status vector
    No value
gdsdb.seekblob.blob    Blob
    Unsigned 32-bit integer
gdsdb.seekblob.mode    Mode
    Unsigned 32-bit integer
gdsdb.segment.blob     Blob
    Unsigned 32-bit integer
gdsdb.segment.length   Length
    Unsigned 32-bit integer
gdsdb.segment.segment  Segment
    String
gdsdb.send.incarnation Send request
    Unsigned 32-bit integer
gdsdb.send.messages   Send request
    Unsigned 32-bit integer
gdsdb.send.msgnr      Send request
    Unsigned 32-bit integer
gdsdb.send.request     Send request
    Unsigned 32-bit integer
gdsdb.send.transaction Send request
    Unsigned 32-bit integer
gdsdb.slice.id         ID
    Unsigned 64-bit integer
gdsdb.slice.parameters Parameters
    Unsigned 32-bit integer
gdsdb.slice.sdl        Slice description language
    String
gdsdb.slice.transaction Transaction
    Unsigned 32-bit integer
gdsdb.sliceresponse.length Length
    Unsigned 32-bit integer
gdsdb.sqlresponse.msgcount SQL Response, Message Count
    Unsigned 32-bit integer
gdsdb.transact.database Database
    Unsigned 32-bit integer
gdsdb.transact.messages Messages
    Unsigned 32-bit integer
gdsdb.transact.transaction Database
    Unsigned 32-bit integer
gdsdb.transactresponse.messages Messages
    Unsigned 32-bit integer
```

**Fractal Generator Protocol (fractalgeneratorprotocol)**

```

fractalgeneratorprotocol.buffer    Buffer
    Byte array
fractalgeneratorprotocol.data_points    Points
    Unsigned 32-bit integer
fractalgeneratorprotocol.data_start_x    StartX
    Unsigned 32-bit integer
fractalgeneratorprotocol.data_start_y    StartY
    Unsigned 32-bit integer
fractalgeneratorprotocol.message_flags    Flags
    Unsigned 8-bit integer
fractalgeneratorprotocol.message_length    Length
    Unsigned 16-bit integer
fractalgeneratorprotocol.message_type    Type
    Unsigned 8-bit integer
fractalgeneratorprotocol.parameter_algorithmid    AlgorithmID
    Unsigned 32-bit integer
fractalgeneratorprotocol.parameter_climag    C1Imag
    Double-precision floating point
fractalgeneratorprotocol.parameter_clreal    C1Real
    Double-precision floating point
fractalgeneratorprotocol.parameter_c2imag    C2Imag
    Double-precision floating point
fractalgeneratorprotocol.parameter_c2real    C2Real
    Double-precision floating point
fractalgeneratorprotocol.parameter_height    Height
    Unsigned 32-bit integer
fractalgeneratorprotocol.parameter_maxiterations    MaxIterations
    Unsigned 32-bit integer
fractalgeneratorprotocol.parameter_n    N
    Double-precision floating point
fractalgeneratorprotocol.parameter_width    Width
    Unsigned 32-bit integer

```

**Frame (frame)**

```

frame.cap_len    Frame length stored into the capture file
    Unsigned 32-bit integer
frame.coloring_rule.name    Coloring Rule Name
    String
    The frame matched the coloring rule with this name
frame.coloring_rule.string    Coloring Rule String
    String
    The frame matched this coloring rule string
frame.file_off    File Offset
    Signed 64-bit integer

```

frame.len Frame length on the wire  
Unsigned 32-bit integer

frame.link\_nr Link Number  
Unsigned 16-bit integer

frame.marked Frame is marked  
Boolean  
Frame is marked in the GUI

frame.number Frame Number  
Unsigned 32-bit integer

frame.p2p\_dir Point-to-Point Direction  
Unsigned 8-bit integer

frame.pkt\_len Frame length on the wire  
Unsigned 32-bit integer

frame.protocols Protocols in frame  
String  
Protocols carried by this frame

frame.ref\_time This is a Time Reference frame  
No value  
This frame is a Time Reference frame

frame.time Arrival Time  
Date/Time stamp  
Absolute time when this frame was captured

frame.time\_delta Time delta from previous captured frame  
Time duration  
Time delta from previous captured frame

frame.time\_delta\_displayed Time delta from previous displayed frame  
Time duration  
Time delta from previous displayed frame

frame.time\_invalid Arrival Timestamp invalid  
No value  
The timestamp from the capture is out of the valid range

frame.time\_relative Time since reference or first frame  
Time duration  
Time relative to time reference or first frame

**Frame Relay (fr)**

fr.becn BECN  
Boolean  
Backward Explicit Congestion Notification

fr.chdlctype Type  
Unsigned 16-bit integer  
Frame Relay Cisco HDLC Encapsulated Protocol

fr.control Control Field  
Unsigned 8-bit integer  
Control field

fr.control.f Final  
Boolean

```
fr.control.ftype  Frame type
                  Unsigned 16-bit integer
fr.control.n_r    N(R)
                  Unsigned 16-bit integer
fr.control.n_s    N(S)
                  Unsigned 16-bit integer
fr.control.p      Poll
                  Boolean
fr.control.s_ftype  Supervisory frame type
                  Unsigned 16-bit integer
fr.control.u_modifier_cmd  Command
                  Unsigned 8-bit integer
fr.control.u_modifier_resp  Response
                  Unsigned 8-bit integer
fr.cr             CR
                  Boolean
                  Command/Response
fr.dc             DC
                  Boolean
                  Address/Control
fr.de             DE
                  Boolean
                  Discard Eligibility
fr.dlci          DLCI
                  Unsigned 32-bit integer
                  Data-Link Connection Identifier
fr.dlcore_control  DL-CORE Control
                  Unsigned 8-bit integer
                  DL-Core control bits
fr.ea            EA
                  Boolean
                  Extended Address
fr.fecn          FECN
                  Boolean
                  Forward Explicit Congestion Notification
fr.lower_dlci    Lower DLCI
                  Unsigned 8-bit integer
                  Lower bits of DLCI
fr.nlpid         NLPID
                  Unsigned 8-bit integer
                  Frame Relay Encapsulated Protocol NLPID
fr.second_dlci   Second DLCI
                  Unsigned 8-bit integer
                  Bits below upper bits of DLCI
fr.snap.oui      Organization Code
                  Unsigned 24-bit integer
```

```
fr.snap.pid Protocol ID
    Unsigned 16-bit integer

fr.snaptype Type
    Unsigned 16-bit integer
    Frame Relay SNAP Encapsulated Protocol

fr.third_dlci Third DLCI
    Unsigned 8-bit integer
    Additional bits of DLCI

fr.upper_dlci Upper DLCI
    Unsigned 8-bit integer
    Upper bits of DLCI
```

**G.723 (g723)**

```
g723.frame_size_and_codec Frame size and codec type
    Unsigned 8-bit integer
    RATEFLAG_B0

g723.lpc.b5b0 LPC_B5...LPC_B0
    Unsigned 8-bit integer
    LPC_B5...LPC_B0
```

**GARP Multicast Registration Protocol (gmrp)**

```
gmrp.attribute_event Event
    Unsigned 8-bit integer

gmrp.attribute_length Length
    Unsigned 8-bit integer

gmrp.attribute_type Type
    Unsigned 8-bit integer

gmrp.attribute_value_group_membership Value
    6-byte Hardware (MAC) Address

gmrp.attribute_value_service_requirement Value
    Unsigned 8-bit integer

gmrp.protocol_id Protocol ID
    Unsigned 16-bit integer
```

**GARP VLAN Registration Protocol (gvrp)**

```
gvrp.attribute_event Event
    Unsigned 8-bit integer

gvrp.attribute_length Length
    Unsigned 8-bit integer

gvrp.attribute_type Type
    Unsigned 8-bit integer

gvrp.attribute_value Value
    Unsigned 16-bit integer

gvrp.protocol_id Protocol ID
    Unsigned 16-bit integer
```

**GPRS Network service (gprs\_ns)**

```
gprs_ns.bvci   BVCI
  Unsigned 16-bit integer
  Cell ID

gprs_ns.cause  Cause
  Unsigned 8-bit integer
  Cause

gprs_ns.ielength  IE Length
  Unsigned 16-bit integer
  IE Length

gprs_ns.ietype  IE Type
  Unsigned 8-bit integer
  IE Type

gprs_ns.nsei   NSEI
  Unsigned 16-bit integer
  Network Service Entity Id

gprs_ns.nsvci  NSVCI
  Unsigned 16-bit integer
  Network Service Virtual Connection id

gprs_ns.pdutype  PDU Type
  Unsigned 8-bit integer
  NS Command

gprs_ns.spare  Spare octet
  Unsigned 8-bit integer
```

**GPRS Tunneling Protocol (gtp)**

```
gtp.apn  APN
  String
  Access Point Name

gtp.bssgp_cause  BSSGP Cause
  Unsigned 8-bit integer
  BSSGP Cause

gtp.cause  Cause
  Unsigned 8-bit integer
  Cause of operation

gtp.chrg_char  Charging characteristics
  Unsigned 16-bit integer
  Charging characteristics

gtp.chrg_char_f  Flat rate charging
  Unsigned 16-bit integer
  Flat rate charging

gtp.chrg_char_h  Hot billing charging
  Unsigned 16-bit integer
  Hot billing charging

gtp.chrg_char_n  Normal charging
  Unsigned 16-bit integer
  Normal charging
```

```
gtp.chrg_char_p  Prepaid charging
  Unsigned 16-bit integer
  Prepaid charging

gtp.chrg_char_r  Reserved
  Unsigned 16-bit integer
  Reserved

gtp.chrg_char_s  Spare
  Unsigned 16-bit integer
  Spare

gtp.chrg_id      Charging ID
  Unsigned 32-bit integer
  Charging ID

gtp.chrg_ipv4    CG address IPv4
  IPv4 address
  Charging Gateway address IPv4

gtp.chrg_ipv6    CG address IPv6
  IPv6 address
  Charging Gateway address IPv6

gtp.cksn_ksi     Ciphering Key Sequence Number (CKSN)/Key Set Identifier (KSI)
  Unsigned 8-bit integer
  CKSN/KSI

gtp.cmn_flg.mbs_cnt_inf  MBMS Counting Information
  Boolean
  MBMS Counting Information

gtp.cmn_flg.mbs_srv_type  MBMS Service Type
  Boolean
  MBMS Service Type

gtp.cmn_flg.no_qos_neg    No QoS negotiation
  Boolean
  No QoS negotiation

gtp.cmn_flg.nrsn          NRSN bit field
  Boolean
  NRSN bit field

gtp.cmn_flg.ppc           Prohibit Payload Compression
  Boolean
  Prohibit Payload Compression

gtp.cmn_flg.ran_pcd_rd    RAN Procedures Ready
  Boolean
  RAN Procedures Ready

gtp.ext_apn_res           Restriction Type
  Unsigned 8-bit integer
  Restriction Type

gtp.ext_flow_label        Flow Label Data I
  Unsigned 16-bit integer
  Flow label data

gtp.ext_geo_loc_type      Geographic Location Type
  Unsigned 8-bit integer
  Geographic Location Type
```

```
gtp.ext_id  Extension identifier
            Unsigned 16-bit integer
            Extension Identifier

gtp.ext_imei_sv  IMEI(SV)
                String
                IMEI(SV)

gtp.ext_length  Length
                Unsigned 16-bit integer
                IE Length

gtp.ext_rat_type  RAT Type
                  Unsigned 8-bit integer
                  RAT Type

gtp.ext_sac  SAC
             Unsigned 16-bit integer
             SAC

gtp.ext_val  Extension value
             Byte array
             Extension Value

gtp.flags  Flags
           Unsigned 8-bit integer
           Ver/PT/Spare...

gtp.flags.e  Is Next Extension Header present?
             Boolean
             Is Next Extension Header present? (1 = yes, 0 = no)

gtp.flags.payload  Protocol type
                   Unsigned 8-bit integer
                   Protocol Type

gtp.flags.pn  Is N-PDU number present?
              Boolean
              Is N-PDU number present? (1 = yes, 0 = no)

gtp.flags.reserved  Reserved
                    Unsigned 8-bit integer
                    Reserved (shall be sent as '111' )

gtp.flags.s  Is Sequence Number present?
             Boolean
             Is Sequence Number present? (1 = yes, 0 = no)

gtp.flags.snn  Is SNDCP N-PDU included?
               Boolean
               Is SNDCP N-PDU LLC Number included? (1 = yes, 0 = no)

gtp.flags.version  Version
                   Unsigned 8-bit integer
                   GTP Version

gtp.flow_label  Flow label
                Unsigned 16-bit integer
                Downlink flow label data

gtp.flow_label  Flow label
                Unsigned 16-bit integer
                Flow label
```

```
gtp.flow_sig  Flow label Signalling
  Unsigned 16-bit integer
  Flow label signalling

gtp.gsn_addr_len  GSN Address Length
  Unsigned 8-bit integer
  GSN Address Length

gtp.gsn_addr_type  GSN Address Type
  Unsigned 8-bit integer
  GSN Address Type

gtp.gsn_ipv4  GSN address IPv4
  IPv4 address
  GSN address IPv4

gtp.gsn_ipv6  GSN address IPv6
  IPv6 address
  GSN address IPv6

gtp.imsi  IMSI
  String
  International Mobile Subscriber Identity number

gtp.lac  LAC
  Unsigned 16-bit integer
  Location Area Code

gtp.length  Length
  Unsigned 16-bit integer
  Length (i.e. number of octets after TID or TEID)

gtp.map_cause  MAP cause
  Unsigned 8-bit integer
  MAP cause

gtp.mbms_sa_code  MBMS service area code
  Unsigned 16-bit integer
  MBMS service area code

gtp.mbms_ses_dur_days  Estimated session duration days
  Unsigned 8-bit integer
  Estimated session duration days

gtp.mbms_ses_dur_s  Estimated session duration seconds
  Unsigned 24-bit integer
  Estimated session duration seconds

gtp.mbs_2g_3g_ind  MBMS 2G/3G Indicator
  Unsigned 8-bit integer
  MBMS 2G/3G Indicator

gtp.mcc  MCC
  Unsigned 16-bit integer
  Mobile Country Code

gtp.message  Message Type
  Unsigned 8-bit integer
  GTP Message Type

gtp.mnc  MNC
  Unsigned 8-bit integer
  Mobile Network Code
```

gtp.ms\_reason MS not reachable reason  
Unsigned 8-bit integer  
MS Not Reachable Reason

gtp.ms\_valid MS validated  
Boolean  
MS validated

gtp.msisdn MSISDN  
String  
MS international PSTN/ISDN number

gtp.next Next extension header type  
Unsigned 8-bit integer  
Next Extension Header Type

gtp.no\_of\_mbms\_sa\_codes Number of MBMS service area codes  
Unsigned 8-bit integer  
Number N of MBMS service area codes

gtp.no\_of\_vectors No of Vectors  
Unsigned 8-bit integer  
No of Vectors

gtp.node\_ipv4 Node address IPv4  
IPv4 address  
Recommended node address IPv4

gtp.node\_ipv6 Node address IPv6  
IPv6 address  
Recommended node address IPv6

gtp.npdu\_number N-PDU Number  
Unsigned 8-bit integer  
N-PDU Number

gtp.nsapi NSAPI  
Unsigned 8-bit integer  
Network layer Service Access Point Identifier

gtp.pkt\_flow\_id Packet Flow ID  
Unsigned 8-bit integer  
Packet Flow ID

gtp.ptmsi P-TMSI  
Unsigned 32-bit integer  
Packet-Temporary Mobile Subscriber Identity

gtp.ptmsi\_sig P-TMSI Signature  
Unsigned 24-bit integer  
P-TMSI Signature

gtp.qos\_al\_ret\_priority Allocation/Retention priority  
Unsigned 8-bit integer  
Allocation/Retention Priority

gtp.qos\_del\_err\_sdu Delivery of erroneous SDU  
Unsigned 8-bit integer  
Delivery of Erroneous SDU

gtp.qos\_del\_order Delivery order  
Unsigned 8-bit integer  
Delivery Order

```
gtp.qos_delay  QoS delay
  Unsigned 8-bit integer
  Quality of Service Delay Class

gtp.qos_guar_dl  Guaranteed bit rate for downlink
  Unsigned 8-bit integer
  Guaranteed bit rate for downlink

gtp.qos_guar_ul  Guaranteed bit rate for uplink
  Unsigned 8-bit integer
  Guaranteed bit rate for uplink

gtp.qos_max_dl  Maximum bit rate for downlink
  Unsigned 8-bit integer
  Maximum bit rate for downlink

gtp.qos_max_sdu_size  Maximum SDU size
  Unsigned 8-bit integer
  Maximum SDU size

gtp.qos_max_ul  Maximum bit rate for uplink
  Unsigned 8-bit integer
  Maximum bit rate for uplink

gtp.qos_mean  QoS mean
  Unsigned 8-bit integer
  Quality of Service Mean Throughput

gtp.qos_peak  QoS peak
  Unsigned 8-bit integer
  Quality of Service Peak Throughput

gtp.qos_precedence  QoS precedence
  Unsigned 8-bit integer
  Quality of Service Precedence Class

gtp.qos_reliabilty  QoS reliability
  Unsigned 8-bit integer
  Quality of Service Reliability Class

gtp.qos_res_ber  Residual BER
  Unsigned 8-bit integer
  Residual Bit Error Rate

gtp.qos_sdu_err_ratio  SDU Error ratio
  Unsigned 8-bit integer
  SDU Error Ratio

gtp.qos_spare1  Spare
  Unsigned 8-bit integer
  Spare (shall be sent as '00' )

gtp.qos_spare2  Spare
  Unsigned 8-bit integer
  Spare (shall be sent as 0)

gtp.qos_spare3  Spare
  Unsigned 8-bit integer
  Spare (shall be sent as '000' )

gtp.qos_traf_class  Traffic class
  Unsigned 8-bit integer
  Traffic Class
```

```
gtp.qos_traf_handl_prio  Traffic handling priority
    Unsigned 8-bit integer
    Traffic Handling Priority

gtp.qos_trans_delay     Transfer delay
    Unsigned 8-bit integer
    Transfer Delay

gtp.qos_version         Version
    String
    Version of the QoS Profile

gtp.rab_gtp_dn          Downlink GTP-U seq number
    Unsigned 16-bit integer
    Downlink GTP-U sequence number

gtp.rab_gtp_up          Uplink GTP-U seq number
    Unsigned 16-bit integer
    Uplink GTP-U sequence number

gtp.rab_pdu_dn          Downlink next PDCP-PDU seq number
    Unsigned 16-bit integer
    Downlink next PDCP-PDU sequence number

gtp.rab_pdu_up          Uplink next PDCP-PDU seq number
    Unsigned 16-bit integer
    Uplink next PDCP-PDU sequence number

gtp.rac                 RAC
    Unsigned 8-bit integer
    Routing Area Code

gtp.ranap_cause         RANAP cause
    Unsigned 8-bit integer
    RANAP cause

gtp.recovery            Recovery
    Unsigned 8-bit integer
    Restart counter

gtp.reorder             Reordering required
    Boolean
    Reordering required

gtp.rnc_ipv4            RNC address IPv4
    IPv4 address
    Radio Network Controller address IPv4

gtp.rnc_ipv6            RNC address IPv6
    IPv6 address
    Radio Network Controller address IPv6

gtp.rp                  Radio Priority
    Unsigned 8-bit integer
    Radio Priority for uplink tx

gtp.rp_nsapi            NSAPI in Radio Priority
    Unsigned 8-bit integer
    Network layer Service Access Point Identifier in Radio Priority

gtp.rp_sms              Radio Priority SMS
    Unsigned 8-bit integer
    Radio Priority for MO SMS
```

```
gtp.rp_spare  Reserved
  Unsigned 8-bit integer
  Spare bit

gtp.security_mode  Security Mode
  Unsigned 8-bit integer
  Security Mode

gsm_a.FC_frequency_cap  FC Frequency Capability
              Unsigned 8-bit integer
              FC Frequency Capability

gsm_a.L3_protocol_discriminator  Protocol discriminator
              Unsigned 8-bit integer
              Protocol discriminator

gsm_a.LCS_VA_cap  LCS VA capability (LCS value added location request notificati
              Unsigned 8-bit integer
              LCS VA capability (LCS value added location request notification capability)

gsm_a.MSC2_rev  Revision Level
              Unsigned 8-bit integer
              Revision level

gsm_a.SM_cap  SM capability (MT SMS pt to pt capability)
              Unsigned 8-bit integer
              SM capability (MT SMS pt to pt capability)

gsm_a.SS_screening_indicator  SS Screening Indicator
              Unsigned 8-bit integer
              SS Screening Indicator

gsm_a.SoLSA  SoLSA
              Unsigned 8-bit integer
              SoLSA

gsm_a.UCS2_treatment  UCS2 treatment
              Unsigned 8-bit integer
              UCS2 treatment

gsm_a.VBS_notification_rec  VBS notification reception
              Unsigned 8-bit integer
              VBS notification reception

gsm_a.VGCS_notification_rec  VGCS notification reception
              Unsigned 8-bit integer
              VGCS notification reception

gsm_a.algorithm_identifier  Algorithm identifier
              Unsigned 8-bit integer
              Algorithm_identifier

gsm_a.apdu_protocol_id  Protocol ID
              Unsigned 8-bit integer
              APDU embedded protocol id

gsm_a.bcc  BCC
              Unsigned 8-bit integer
              BCC

gsm_a.bcch_arfcn  BCCH ARFCN(RF channel number)
              Unsigned 16-bit integer
              BCCH ARFCN

gsm_a.be.cell_id_disc  Cell identification discriminator
              Unsigned 8-bit integer
              Cell identificationdiscriminator
```

```
gsm_a.be.rnc_id  RNC-ID
  Unsigned 16-bit integer
  RNC-ID

gsm_a.bssmap_msgtype  BSSMAP Message Type
  Unsigned 8-bit integer

gsm_a.call_prio  Call priority
  Unsigned 8-bit integer
  Call priority

gsm_a.cell_ci  Cell CI
  Unsigned 16-bit integer

gsm_a.cell_lac  Cell LAC
  Unsigned 16-bit integer

gsm_a.cld_party_bcd_num  Called Party BCD Number
  String

gsm_a.clg_party_bcd_num  Calling Party BCD Number
  String

gsm_a.dtap_msg_cc_type  DTAP Call Control Message Type
  Unsigned 8-bit integer

gsm_a.dtap_msg_gmm_type  DTAP GPRS Mobility Management Message Type
  Unsigned 8-bit integer

gsm_a.dtap_msg_mm_type  DTAP Mobility Management Message Type
  Unsigned 8-bit integer

gsm_a.dtap_msg_rr_type  DTAP Radio Resources Management Message Type
  Unsigned 8-bit integer

gsm_a.dtap_msg_sm_type  DTAP GPRS Session Management Message Type
  Unsigned 8-bit integer

gsm_a.dtap_msg_sms_type  DTAP Short Message Service Message Type
  Unsigned 8-bit integer

gsm_a.dtap_msg_ss_type  DTAP Non call Supplementary Service Message Type
  Unsigned 8-bit integer

gsm_a.extension  Extension
  Boolean
  Extension

gsm_a.gmm.cn_spec_drx_cycle_len_coef  CN Specific DRX cycle length coefficient
  Unsigned 8-bit integer
  CN Specific DRX cycle length coefficient

gsm_a.gmm.non_drx_timer  Non-DRX timer
  Unsigned 8-bit integer
  Non-DRX timer

gsm_a.gmm.split_on_ccch  SPLIT on CCCH
  Boolean
  SPLIT on CCCH

gsm_a.ie.mobileid.type  Mobile Identity Type
  Unsigned 8-bit integer
  Mobile Identity Type
```

```
gsm_a.imei   IMEI
             String

gsm_a.imeisv IMEISV
             String

gsm_a.imsi   IMSI
             String

gsm_a.len    Length
             Unsigned 8-bit integer

gsm_a.lsa_id LSA Identifier
             Unsigned 24-bit integer
             LSA Identifier

gsm_a.mbs_service_id MBMS Service ID
                     Byte array
                     MBMS Service ID

gsm_a.ncc    NCC
             Unsigned 8-bit integer
             NCC

             No value

gsm_a.numbering_plan_id Numbering plan identification
                       Unsigned 8-bit integer
                       Numbering plan identification

gsm_a.oddevenind Odd/even indication
                 Unsigned 8-bit integer
                 Mobile Identity

gsm_a.ps_sup_cap PS capability (pseudo-synchronization capability)
                 Unsigned 8-bit integer
                 PS capability (pseudo-synchronization capability)

gsm_a.ptmsi_sig P-TMSI Signature
                 Unsigned 24-bit integer
                 P-TMSI Signature

gsm_a.ptmsi_sig2 P-TMSI Signature 2
                 Unsigned 24-bit integer
                 P-TMSI Signature 2

gsm_a.qos.ber  Residual Bit Error Rate (BER)
               Unsigned 8-bit integer
               Residual Bit Error Rate (BER)

gsm_a.qos.del_of_err_sdu Delivery of erroneous SDUs
                       Unsigned 8-bit integer
                       Delivery of erroneous SDUs

gsm_a.qos.del_order Delivery order
                    Unsigned 8-bit integer
                    Delivery order

gsm_a.qos.delay_cls Delay class
                    Unsigned 8-bit integer
                    Quality of Service Delay Class
```

```
gsm_a.qos.sdu_err_rat  SDU error ratio
    Unsigned 8-bit integer
    SDU error ratio

gsm_a.qos.traff_hdl_pri  Traffic handling priority
    Unsigned 8-bit integer
    Traffic handling priority

gsm_a.qos.traffic_cls  Traffic class
    Unsigned 8-bit integer
    Traffic class

gsm_a.rp_msg_type  RP Message Type
    Unsigned 8-bit integer

gsm_a.rr.Group_cipher_key_number  Group cipher key number
    Unsigned 8-bit integer
    Group cipher key number

gsm_a.rr.ICMI  ICMI: Initial Codec Mode Indicator
    Unsigned 8-bit integer
    ICMI: Initial Codec Mode Indicator

gsm_a.rr.MBMS_broadcast  MBMS Broadcast
    Boolean
    MBMS Broadcast

gsm_a.rr.MBMS_multicast  MBMS Multicast
    Boolean
    MBMS Multicast

gsm_a.rr.NCSB  NSCB: Noise Suppression Control Bit
    Unsigned 8-bit integer
    NSCB: Noise Suppression Control Bit

gsm_a.rr.RRcause  RR cause value
    Unsigned 8-bit integer
    RR cause value

gsm_a.rr.SC  SC
    Unsigned 8-bit integer
    SC

gsm_a.rr.T1prim  T1'
    Unsigned 8-bit integer
    T1'

gsm_a.rr.T2  T2
    Unsigned 8-bit integer
    T2

gsm_a.rr.T3  T3
    Unsigned 16-bit integer
    T3

gsm_a.rr.channel_mode  Channel Mode
    Unsigned 8-bit integer
    Channel Mode

gsm_a.rr.channel_mode2  Channel Mode 2
    Unsigned 8-bit integer
    Channel Mode 2
```

```

gsm_a.rr.dedicated_mode_or_tbf  Dedicated mode or TBF
    Unsigned 8-bit integer
    Dedicated mode or TBF

gsm_a.rr.ho_ref_val  Handover reference value
    Unsigned 8-bit integer
    Handover reference value

gsm_a.rr.last_segment  Last Segment
    Boolean
    Last Segment

gsm_a.rr.multirate_speech_ver  Multirate speech version
    Unsigned 8-bit integer
    Multirate speech version

gsm_a.rr.page_mode  Page Mode
    Unsigned 8-bit integer
    Page Mode

gsm_a.rr.pow_cmd_atc  Spare
    Boolean
    Spare

gsm_a.rr.pow_cmd_epc  EPC_mode
    Boolean
    EPC_mode

gsm_a.rr.pow_cmd_fpcepc  FPC_EPC
    Boolean
    FPC_EPC

gsm_a.rr.pow_cmd_pow  POWER LEVEL
    Unsigned 8-bit integer
    POWER LEVEL

gsm_a.rr.rr_2_pseudo_len  L2 Pseudo Length value
    Unsigned 8-bit integer
    L2 Pseudo Length value

gsm_map.qos.ber  Residual Bit Error Rate (BER)
    Unsigned 8-bit integer
    Residual Bit Error Rate (BER)

gsm_map.qos.brates_dlink  Guaranteed bit rate for downlink in kbit/s
    Unsigned 32-bit integer
    Guaranteed bit rate for downlink

gsm_map.qos.brates_ulink  Guaranteed bit rate for uplink in kbit/s
    Unsigned 32-bit integer
    Guaranteed bit rate for uplink

gsm_map.qos.del_of_err_sdu  Delivery of erroneous SDUs
    Unsigned 8-bit integer
    Delivery of erroneous SDUs

gsm_map.qos.del_order  Delivery order
    Unsigned 8-bit integer
    Delivery order

```

```

gsm_map.qos.max_brake_dlink  Maximum bit rate for downlink in kbit/s
    Unsigned 32-bit integer
    Maximum bit rate for downlink

gsm_map.qos.max_brake_ulink  Maximum bit rate for uplink in kbit/s
    Unsigned 32-bit integer
    Maximum bit rate for uplink

gsm_map.qos.max_sdu  Maximum SDU size
    Unsigned 32-bit integer
    Maximum SDU size

gsm_map.qos.sdu_err_rat  SDU error ratio
    Unsigned 8-bit integer
    SDU error ratio

gsm_map.qos.traff_hdl_pri  Traffic handling priority
    Unsigned 8-bit integer
    Traffic handling priority

gsm_map.qos.traffic_cls  Traffic class
    Unsigned 8-bit integer
    Traffic class

gsm_map.qos.transfer_delay  Transfer delay (Raw data see TS 24.008 for interpret
    Unsigned 8-bit integer
    Transfer delay

gsm_map.ranap.EncryptionInformation  EncryptionInformation
    No value
    gsm_map.ranap.EncryptionInformation

gsm_map.ranap.IntegrityProtectionInformation  IntegrityProtectionInformation

    No value
    gsm_map_lcs.LCS_QoS

gsm_ss.rdn  rdn
    Unsigned 32-bit integer
    gsm_ss.RDN

gsm_ss.referenceNumber  referenceNumber
    Byte array
    gsm_map_lcs.LCS_ReferenceNumber

gsm_ss.reportingPLMNList  reportingPLMNList
    No value
    gsm_map_lcs.ReportingPLMNList

gsm_ss.sequenceNumber  sequenceNumber
    Unsigned 32-bit integer
    gsm_map_lcs.SequenceNumber
```

```

gsm_ss.ss_Code    ss-Code
    Unsigned 8-bit integer
    gsm_map.SS_Code

gsm_ss.ss_Notification  ss-Notification
    Byte array
    gsm_ss.SS_Notification

gsm_ss.ss_Status    ss-Status
    Byte array
    gsm_map_ss.SS_Status

gsm_ss.supportedGADShapes  supportedGADShapes
    Byte array
    gsm_map_lcs.SupportedGADShapes

gsm_ss.suppressOA    suppressOA
    No value
    gsm_ss.NULL

gsm_ss.suppressPrefCUG  suppressPrefCUG
    No value
    gsm_ss.NULL

gsm_ss.terminationCause  terminationCause
    Unsigned 32-bit integer
    gsm_ss.TerminationCause

gsm_ss.uUS_Required    uUS-Required
    Boolean
    gsm_ss.BOOLEAN

gsm_ss.uUS_Service    uUS-Service
    Unsigned 32-bit integer
    gsm_ss.UUS_Service

gsm_ss.velocityEstimate  velocityEstimate
    Byte array
    gsm_map_lcs.VelocityEstimate

gsm_ss.verificationResponse  verificationResponse
    Unsigned 32-bit integer
    gsm_ss.VerificationResponse

```

#### **GSM SMS TPDU (GSM 03.40) (gsm\_sms)**

```

gsm_sms.coding_group_bits2  Coding Group Bits
    Unsigned 8-bit integer
    Coding Group Bits

gsm_sms.coding_group_bits4  Coding Group Bits
    Unsigned 8-bit integer
    Coding Group Bits

```

#### **GSM Short Message Service User Data (gsm-sms-ud)**

```

gsm-sms-ud.fragment  Short Message fragment
    Frame number
    GSM Short Message fragment

```

`gsm-sms-ud.fragment.error` Short Message defragmentation error  
Frame number  
GSM Short Message defragmentation error due to illegal fragments

`gsm-sms-ud.fragment.multiple_tails` Short Message has multiple tail fragments  
Boolean  
GSM Short Message fragment has multiple tail fragments

`gsm-sms-ud.fragment.overlap` Short Message fragment overlap  
Boolean  
GSM Short Message fragment overlaps with other fragment(s)

`gsm-sms-ud.fragment.overlap.conflicts` Short Message fragment overlapping with c  
Boolean  
GSM Short Message fragment overlaps with conflicting data

`gsm-sms-ud.fragment.too_long_fragment` Short Message fragment too long  
Boolean  
GSM Short Message fragment data goes beyond the packet end

`gsm-sms-ud.fragments` Short Message fragments  
No value  
GSM Short Message fragments

`gsm-sms-ud.reassembled.in` Reassembled in  
Frame number  
GSM Short Message has been reassembled in this packet.

`gsm-sms-ud.udh.iei` IE Id  
Unsigned 8-bit integer  
Name of the User Data Header Information Element.

`gsm-sms-ud.udh.len` UDH Length  
Unsigned 8-bit integer  
Length of the User Data Header (bytes)

`gsm-sms-ud.udh.mm` Multiple messages UDH  
No value  
Multiple messages User Data Header

`gsm-sms-ud.udh.mm.msg_id` Message identifier  
Unsigned 16-bit integer  
Identification of the message

`gsm-sms-ud.udh.mm.msg_part` Message part number  
Unsigned 8-bit integer  
Message part (fragment) sequence number

`gsm-sms-ud.udh.mm.msg_parts` Message parts  
Unsigned 8-bit integer  
Total number of message parts (fragments)

`gsm-sms-ud.udh.ports` Port number UDH  
No value  
Port number User Data Header

`gsm-sms-ud.udh.ports.dst` Destination port  
Unsigned 8-bit integer  
Destination port

`gsm-sms-ud.udh.ports.src` Source port  
Unsigned 8-bit integer  
Source port

**GSS-API Generic Security Service Application Program Interface (gss-api)**

gss-api.OID   OID  
String  
This is a GSS-API Object Identifier

gss-api.reassembled\_in   Reassembled In  
Frame number  
The frame where this pdu is reassembled

gss-api.segment   GSSAPI Segment  
Frame number  
GSSAPI Segment

gss-api.segment.error   Defragmentation error  
Frame number  
Defragmentation error due to illegal fragments

gss-api.segment.multipletails   Multiple tail fragments found  
Boolean  
Several tails were found when defragmenting the packet

gss-api.segment.overlap   Fragment overlap  
Boolean  
Fragment overlaps with other fragments

gss-api.segment.overlap.conflict   Conflicting data in fragment overlap  
Boolean  
Overlapping fragments contained conflicting data

gss-api.segment.segments   GSSAPI Segments  
No value  
GSSAPI Segments

gss-api.segment.toolongfragment   Fragment too long  
Boolean  
Fragment contained data past end of packet

**General Inter-ORB Protocol (giop)**

giop.TCKind   TypeCode enum  
Unsigned 32-bit integer

giop.compressed   ZIOP  
Unsigned 8-bit integer

giop.endianess   Endianess  
Unsigned 8-bit integer

giop.exceptionid   Exception id  
String

giop.iiop.host   IIOP::Profile\_host  
String

giop.iiop.port   IIOP::Profile\_port  
Unsigned 16-bit integer

giop.iiop.scid   SCID  
Unsigned 32-bit integer

giop.iiop.vscid   VSCID  
Unsigned 32-bit integer

```
giop.iiop_vmaj  IIOP Major Version
                Unsigned 8-bit integer
giop.iiop_vmin  IIOP Minor Version
                Unsigned 8-bit integer
giop.iioptag   IIOP Component TAG
                Unsigned 32-bit integer
giop.iortag    IOR Profile TAG
                Unsigned 8-bit integer
giop.len       Message size
                Unsigned 32-bit integer
giop.objektkey Object Key
                Byte array
giop.profid    Profile ID
                Unsigned 32-bit integer
giop.replystatus Reply status
                Unsigned 32-bit integer
giop.repoid    Repository ID
                String
giop.request_id Request id
                Unsigned 32-bit integer
giop.request_op Request operation
                String
giop.seqlen    Sequence Length
                Unsigned 32-bit integer
giop.strlen    String Length
                Unsigned 32-bit integer
giop.tcValueModifier ValueModifier
                Signed 16-bit integer
giop.tcVisibility Visibility
                Signed 16-bit integer
giop.tcboolean TypeCode boolean data
                Boolean
giop.tcchar    TypeCode char data
                Unsigned 8-bit integer
giop.tccount   TypeCode count
                Unsigned 32-bit integer
giop.tcdefault_used default_used
                Signed 32-bit integer
giop.tcdigits  Digits
                Unsigned 16-bit integer
giop.tcdouble  TypeCode double data
                Double-precision floating point
giop.tcenumdata TypeCode enum data
                Unsigned 32-bit integer
```

```
giop.tcfloat  TypeCode float data
              Double-precision floating point
giop.tclength Length
              Unsigned 32-bit integer
giop.tclongdata  TypeCode long data
              Signed 32-bit integer
giop.tcm maxlen  Maximum length
              Unsigned 32-bit integer
giop.tcmemname  TypeCode member name
              String
giop.tcname     TypeCode name
              String
giop.tcoctet   TypeCode octet data
              Unsigned 8-bit integer
giop.tcscale   Scale
              Signed 16-bit integer
giop.tcshortdata  TypeCode short data
              Signed 16-bit integer
giop.tcstring  TypeCode string data
              String
giop.tculongdata  TypeCode ulong data
              Unsigned 32-bit integer
giop.tcushortdata  TypeCode ushort data
              Unsigned 16-bit integer
giop.type      Message type
              Unsigned 8-bit integer
giop.typeid    IOR::type_id
              String
```

#### **Generic Routing Encapsulation (gre)**

```
gre.3gpp2_di   Duration Indicator
              Boolean
              Duration Indicator
gre.3gpp2_fci  Flow Control Indicator
              Boolean
              Flow Control Indicator
gre.3gpp2_sdi  SDI/DOS
              Boolean
              Short Data Indicator(SDI)/Data Over Signaling (DOS)
gre.gpp2_3gpp2_seg  Type
              Unsigned 16-bit integer
              Type
gre.gpp2_attrib_id  Type
              Unsigned 8-bit integer
              Type
```

```
gre.ggp2_attrib_length  Length
    Unsigned 8-bit integer
    Length
gre.ggp2_flow_disc      Flow ID
    Byte array
    Flow ID
gre.key                 GRE Key
    Unsigned 32-bit integer
gre.proto               Protocol Type
    Unsigned 16-bit integer
    The protocol that is GRE encapsulated
```

**Gnutella Protocol (gnutella)**

```
gnutella.header        Descriptor Header
    No value
    Gnutella Descriptor Header
gnutella.header.hops    Hops
    Unsigned 8-bit integer
    Gnutella Descriptor Hop Count
gnutella.header.id     ID
    Byte array
    Gnutella Descriptor ID
gnutella.header.payload Payload
    Unsigned 8-bit integer
    Gnutella Descriptor Payload
gnutella.header.size   Length
    Unsigned 8-bit integer
    Gnutella Descriptor Payload Length
gnutella.header.ttl    TTL
    Unsigned 8-bit integer
    Gnutella Descriptor Time To Live
gnutella.pong.files     Files Shared
    Unsigned 32-bit integer
    Gnutella Pong Files Shared
gnutella.pong.ip       IP
    IPv4 address
    Gnutella Pong IP Address
gnutella.pong.kbytes   KBytes Shared
    Unsigned 32-bit integer
    Gnutella Pong KBytes Shared
gnutella.pong.payload  Pong
    No value
    Gnutella Pong Payload
gnutella.pong.port     Port
    Unsigned 16-bit integer
    Gnutella Pong TCP Port
```

```
gnutella.push.index  Index
    Unsigned 32-bit integer
    Gnutella Push Index

gnutella.push.ip     IP
    IPv4 address
    Gnutella Push IP Address

gnutella.push.payload  Push
    No value
    Gnutella Push Payload

gnutella.push.port   Port
    Unsigned 16-bit integer
    Gnutella Push Port

gnutella.push.servent_id  Servent ID
    Byte array
    Gnutella Push Servent ID

gnutella.query.min_speed  Min Speed
    Unsigned 32-bit integer
    Gnutella Query Minimum Speed

gnutella.query.payload  Query
    No value
    Gnutella Query Payload

gnutella.query.search  Search
    String
    Gnutella Query Search

gnutella.queryhit.count  Count
    Unsigned 8-bit integer
    Gnutella QueryHit Count

gnutella.queryhit.extra  Extra
    Byte array
    Gnutella QueryHit Extra

gnutella.queryhit.hit  Hit
    No value
    Gnutella QueryHit

gnutella.queryhit.hit.extra  Extra
    Byte array
    Gnutella Query Extra

gnutella.queryhit.hit.index  Index
    Unsigned 32-bit integer
    Gnutella QueryHit Index

gnutella.queryhit.hit.name  Name
    String
    Gnutella Query Name

gnutella.queryhit.hit.size  Size
    Unsigned 32-bit integer
    Gnutella QueryHit Size

gnutella.queryhit.ip  IP
    IPv4 address
    Gnutella QueryHit IP Address
```

```

gnutella.queryhit.payload  QueryHit
    No value
    Gnutella QueryHit Payload

gnutella.queryhit.port  Port
    Unsigned 16-bit integer
    Gnutella QueryHit Port

gnutella.queryhit.servent_id  Servent ID
    Byte array
    Gnutella QueryHit Servent ID

gnutella.queryhit.speed  Speed
    Unsigned 32-bit integer
    Gnutella QueryHit Speed

gnutella.stream  Gnutella Upload / Download Stream
    No value
    Gnutella Upload / Download Stream

```

### H.248 3GPP (h2483gpp)

```

h248.package_3GCSD  CSD Package
    Byte array
    Circuit Switched Data Package

h248.package_3GCSD.actprot  Activate Protocol
    Byte array
    Activate the higher layer protocol

h248.package_3GCSD.actprot.localpeer  Local Peer Role
    Unsigned 32-bit integer
    It is used to inform the modem whether it should act as originating or termi

h248.package_3GCSD.gsmchancod  GSM channel coding
    Byte array
    Channel information needed for GSM

h248.package_3GCSD.plmnbcb  PLMN Bearer Capability
    Byte array
    The PLMN Bearer Capability

h248.package_3GCSD.protres  Protocol Negotiation Result
    Byte array
    This event is used to report the result of the protocol negotiation

h248.package_3GCSD.protres.cause  Possible Failure Cause
    Unsigned 32-bit integer
    indicates the possible failure cause

h248.package_3GCSD.protres.result  Negotiation Result
    Unsigned 32-bit integer
    reports whether the protocol negotiation has been successful

h248.package_3GCSD.ratechg  Rate Change
    Byte array
    This event is used to report a rate change

h248.package_3GCSD.ratechg.rate  New Rate
    Unsigned 32-bit integer
    reports the new rate for the termination

```

h248.package\_3GTFO Tandem Free Operation  
Byte array  
This package defines events and properties for Tandem Free Operation (TFO) c

h248.package\_3GTFO.codec\_modify Optimal Codec Event  
Byte array  
The event is used to notify the MGC that TFO negotiation has resulted in an

h248.package\_3GTFO.codec\_modify.optimalcodec Optimal Codec Type  
Byte array  
indicates which is the proposed codec type for TFO

h248.package\_3GTFO.codeclist TFO Codec List  
Byte array  
List of codecs for use in TFO protocol

h248.package\_3GTFO.distant\_codec\_list Codec List Event  
Byte array  
The event is used to notify the MGC of the distant TFO partner's supported c

h248.package\_3GTFO.distant\_codec\_list.distlist Distant Codec List  
Byte array  
indicates the codec list for TFO

h248.package\_3GTFO.status TFO Status Event  
Byte array  
The event is used to notify the MGC that a TFO link has been established or

h248.package\_3GTFO.status.tfostatus TFO Status  
Boolean  
reports whether TFO has been established or broken

h248.package\_3GTFO.tfoenable TFO Activity Control  
Unsigned 32-bit integer  
Defines if TFO is enabled or not

h248.package\_3GUP.Mode Mode  
Unsigned 32-bit integer  
Mode

h248.package\_3GUP.delerrrsdu Delivery of erroneous SDUs  
Unsigned 32-bit integer  
Delivery of erroneous SDUs

h248.package\_3GUP.initdir Initialisation Direction  
Unsigned 32-bit integer  
Initialisation Direction

h248.package\_3GUP.interface Interface  
Unsigned 32-bit integer  
Interface

h248.package\_3GUP.upversions UPversions  
Unsigned 32-bit integer  
UPversions

#### **H.248 Annex C (h248c)**

h248.pkg.annexc.ACodec ACodec  
Byte array  
ACodec

```
h248.pkg.annexc.BIR  BIR
    Byte array
    BIR

h248.pkg.annexc.Mediatx  Mediatx
    Unsigned 32-bit integer
    Mediatx

h248.pkg.annexc.NSAP  NSAP
    Byte array
    NSAP

h248.pkg.annexc.USI  USI
    Byte array
    User Service Information

h248.pkg.annexc.a2pcdv  A2PCDV
    Unsigned 24-bit integer
    Acceptable 2 point CDV

h248.pkg.annexc.aallst  AAL1ST
    Unsigned 8-bit integer
    AAL1 subtype

h248.pkg.annexc.aaltype  AALtype
    Unsigned 8-bit integer
    AAL Type

h248.pkg.annexc.aclr  ACLR
    Unsigned 8-bit integer
    Acceptable Cell Loss Ratio (Q.2965.2 ATMF UNI 4.0)

h248.pkg.annexc.addlayer3prot  addlayer3prot
    Unsigned 8-bit integer
    Additional User Information Layer 3 protocol

h248.pkg.annexc.aesa  AESA
    Byte array
    ATM End System Address

h248.pkg.annexc.alc  ALC
    Byte array
    AAL2 Link Characteristics

h248.pkg.annexc.appcdv  APPCDV
    Unsigned 24-bit integer
    Acceptable Point to Point CDV

h248.pkg.annexc.assign  llidnegot
    Unsigned 8-bit integer
    Assignor/Asignee

h248.pkg.annexc.atc  ATC
    Unsigned 32-bit integer
    ATM Traffic Capability

h248.pkg.annexc.bbtc  BBTC
    Unsigned 8-bit integer
    Broadband Transfer Capability

h248.pkg.annexc.bcob  BCOB
    Unsigned 8-bit integer
    Broadband Bearer Class
```

```
h248.pkg.annexc.bei  BEI
  Boolean
  Best Effort Indicator

h248.pkg.annexc.bit_rate  Bit Rate
  Unsigned 32-bit integer
  Bit Rate

h248.pkg.annexc.bmsdu  bmsdu
  Byte array
  bmsdu

h248.pkg.annexc.c2pcdv  C2PCDV
  Unsigned 24-bit integer
  Cumulative 2 point CDV

h248.pkg.annexc.cbrr  CBRR
  Unsigned 8-bit integer
  CBR rate

h248.pkg.annexc.ceetd  CEETD
  Unsigned 16-bit integer
  Cumulative End-to-End Transit Delay (Q.2965.2 ATMF UNI 4.0)

h248.pkg.annexc.cid  CID
  Unsigned 32-bit integer
  Channel-Id

h248.pkg.annexc.clc  CLC
  Byte array
  Close Logical Channel

h248.pkg.annexc.clcack  CLCack
  Byte array
  Close Logical Channel Acknowledge

h248.pkg.annexc.cppcdv  CPPCDV
  Unsigned 24-bit integer
  Cumulative Point to Point CDV

h248.pkg.annexc.databits  databits
  Unsigned 8-bit integer
  Number of stop bits

h248.pkg.annexc.dialedn  Dialed Number
  Byte array
  Dialed Number

h248.pkg.annexc.dialingn  Dialing Number
  Byte array
  Dialing Number

h248.pkg.annexc.dlci  DLCI
  Unsigned 32-bit integer
  Data Link Connection ID (FR)

h248.pkg.annexc.duplexmode  duplexmode
  Unsigned 8-bit integer
  Mode Duplex

h248.pkg.annexc.echoci  ECHOCI
  Byte array
  Not used
```

```
h248.pkg.annexc.ecm    ECM
    Unsigned 8-bit integer
    Error Correction Method

h248.pkg.annexc.encrypt_key  Encrypt Key
    Unsigned 32-bit integer
    Encryption Key

h248.pkg.annexc.encrypt_type  Encrypttype
    Byte array
    Encryption Type

h248.pkg.annexc.fd    FD
    Boolean
    Frame Discard

h248.pkg.annexc.flowcontrx  flowcontrx
    Unsigned 8-bit integer
    Flow Control on Reception

h248.pkg.annexc.flowconttx  flowconttx
    Unsigned 8-bit integer
    Flow Control on Transmission

h248.pkg.annexc.fmsdu  fmsdu
    Byte array
    FMSDU

h248.pkg.annexc.gain  Gain
    Unsigned 32-bit integer
    Gain (dB)

h248.pkg.annexc.h222  H222LogicalChannelParameters
    Byte array
    H222LogicalChannelParameters

h248.pkg.annexc.h223  H223LogicalChannelParameters
    Byte array
    H223LogicalChannelParameters

h248.pkg.annexc.h2250  H2250LogicalChannelParameters
    Byte array
    H2250LogicalChannelParameters

h248.pkg.annexc.inbandneg  inbandneg
    Unsigned 8-bit integer
    In-band/Out-band negotiation

h248.pkg.annexc.intrate  UPPC
    Unsigned 8-bit integer
    Intermediare Rate

h248.pkg.annexc.ipv4  IPv4
    IPv4 address
    IPv4 Address

h248.pkg.annexc.ipv6  IPv6
    IPv6 address
    IPv6 Address

h248.pkg.annexc.itc  ITC
    Unsigned 8-bit integer
    Information Transfer Capability
```

```
h248.pkg.annexc.jitterbuf  JitterBuff
    Unsigned 32-bit integer
    Jitter Buffer Size (ms)
h248.pkg.annexc.layer2prot  layer2prot
    Unsigned 8-bit integer
    Layer 2 protocol
h248.pkg.annexc.layer3prot  layer3prot
    Unsigned 8-bit integer
    Layer 3 protocol
h248.pkg.annexc.llidnegot  llidnegot
    Unsigned 8-bit integer
    Intermediare Rate
h248.pkg.annexc.maxcpssdu  Max CPS SDU
    Unsigned 8-bit integer
    Maximum Common Part Sublayer Service Data Unit size
h248.pkg.annexc.mbs0  MBS0
    Unsigned 24-bit integer
    Maximum Burst Size for CLP=0
h248.pkg.annexc.mbs1  MBS1
    Unsigned 24-bit integer
    Maximum Burst Size for CLP=1
h248.pkg.annexc.media  Media
    Unsigned 32-bit integer
    Media Type
h248.pkg.annexc.meetd  MEETD
    Unsigned 16-bit integer
    Maximum End-to-End Transit Delay (Q.2965.2 ATMF UNI 4.0)
h248.pkg.annexc.modem  modem
    Unsigned 8-bit integer
    Modem Type
h248.pkg.annexc.mult  Rate Multiplier
    Unsigned 8-bit integer
    Rate Multiplier
h248.pkg.annexc.multiframe  multiframe
    Unsigned 8-bit integer
    Multiple Frame establishment support in datalink
h248.pkg.annexc.nci  NCI
    Unsigned 8-bit integer
    Nature of Connection Indicator
h248.pkg.annexc.negotiation  UPPC
    Unsigned 8-bit integer
    Negotiation
h248.pkg.annexc.nicrx  nicrx
    Unsigned 8-bit integer
    Intermediare Rate
h248.pkg.annexc.nictx  nictx
    Unsigned 8-bit integer
    Intermediare Network indipendent clock in transmission
```

```
h248.pkg.annexc.num_of_channels  Number of Channels
    Unsigned 32-bit integer
    Number of Channels

h248.pkg.annexc.olc  OLC
    Byte array
    Open Logical Channel

h248.pkg.annexc.olcack  OLCack
    Byte array
    Open Logical Channel Acknowledge

h248.pkg.annexc.olccnf  OLCcnf
    Byte array
    Open Logical Channel CNF

h248.pkg.annexc.olcrej  OLCrej
    Byte array
    Open Logical Channel Reject

h248.pkg.annexc.opmode  OPMODE
    Unsigned 8-bit integer
    Mode of operation

h248.pkg.annexc.parity  parity
    Unsigned 8-bit integer
    Parity Information Bits

h248.pkg.annexc.pcr0  PCR0
    Unsigned 24-bit integer
    Peak Cell Rate for CLP=0

h248.pkg.annexc.pcr1  PCR1
    Unsigned 24-bit integer
    Peak Cell Rate for CLP=1

h248.pkg.annexc.pfci  PFCI
    Unsigned 8-bit integer
    Partially Filled Cells Identifier

h248.pkg.annexc.port  Port
    Unsigned 16-bit integer
    Port

h248.pkg.annexc.porttype  PortType
    Unsigned 32-bit integer
    Port Type

h248.pkg.annexc.ppt  PPT
    Unsigned 32-bit integer
    Primary Payload Type

h248.pkg.annexc.qosclass  QoSClass
    Unsigned 16-bit integer
    QoS Class (Q.2965.1)

h248.pkg.annexc.rateadapthdr  rateadapthdr
    Unsigned 8-bit integer
    Rate Adaptation Header/No-Header

h248.pkg.annexc.rtp_payload  RTP Payload type
    Unsigned 32-bit integer
    Payload type in RTP Profile
```

```
h248.pkg.annexc.samplepp  Samplepp
    Unsigned 32-bit integer
    Samplepp

h248.pkg.annexc.sampling_rate  Sampling Rate
    Unsigned 32-bit integer
    Sampling Rate

h248.pkg.annexc.sc  Service Class
    Unsigned 32-bit integer
    Service Class

h248.pkg.annexc.scr0  SCR0
    Unsigned 24-bit integer
    Sustained Cell Rate for CLP=0

h248.pkg.annexc.scr1  SCR1
    Unsigned 24-bit integer
    Sustained Cell Rate for CLP=1

h248.pkg.annexc.scri  SCRI
    Unsigned 8-bit integer
    Source Clock frequency Recovery method

h248.pkg.annexc.sdbt  SDBT
    Unsigned 16-bit integer
    Structured Data Transfer Blocksize

h248.pkg.annexc.sdp_a  sdp_a
    String
    SDP A

h248.pkg.annexc.sdp_b  sdp_b
    String
    SDP B

h248.pkg.annexc.sdp_c  sdp_c
    String
    SDP C

h248.pkg.annexc.sdp_e  sdp_e
    String
    SDP E

h248.pkg.annexc.sdp_i  sdp_i
    String
    SDP I

h248.pkg.annexc.sdp_k  sdp_k
    String
    SDP K

h248.pkg.annexc.sdp_m  sdp_m
    String
    SDP M

h248.pkg.annexc.sdp_o  sdp_o
    String
    SDP O

h248.pkg.annexc.sdp_p  sdp_p
    String
    SDP P
```

```

h248.pkg.annexc.sdp_r  sdp_r
    String
    SDP R

h248.pkg.annexc.sdp_s  sdp_s
    String
    SDP S

h248.pkg.annexc.sdp_t  sdp_t
    String
    SDP T

h248.pkg.annexc.sdp_u  sdp_u
    String
    SDP U

h248.pkg.annexc.sdp_v  sdp_v
    String
    SDP V

h248.pkg.annexc.sdp_z  sdp_z
    String
    SDP Z

h248.pkg.annexc.sid    SID
    Unsigned 32-bit integer
    Silence Insertion Descriptor

h248.pkg.annexc.silence_supp  SilenceSupp
    Boolean
    Silence Suppression

h248.pkg.annexc.sscs  sscs
    Byte array
    sscs

h248.pkg.annexc.stc    STC
    Unsigned 8-bit integer
    Susceptibility to Clipping

h248.pkg.annexc.stopbits  stopbits
    Unsigned 8-bit integer
    Number of stop bits

h248.pkg.annexc.sut    SUT
    Byte array
    Served User Transport

h248.pkg.annexc.syncasync  SyncAsync
    Unsigned 8-bit integer
    Synchronous/Asynchronous

h248.pkg.annexc.tci    TCI
    Boolean
    Test Connection Indicator

h248.pkg.annexc.ti     TI
    Boolean
    Tagging Indicator

h248.pkg.annexc.timer_cu  Timer CU
    Unsigned 32-bit integer
    Milliseconds to hold the partially filled cell before sending

```

```
h248.pkg.annexc.tmr  TMR
    Unsigned 8-bit integer
    Transmission Medium Requirement

h248.pkg.annexc.tmsr  TMSR
    Unsigned 8-bit integer
    Transmission Medium Requirement Subrate

h248.pkg.annexc.transmission_mode  Transmission Mode
    Unsigned 32-bit integer
    Transmission Mode

h248.pkg.annexc.transmode  TransMode
    Unsigned 8-bit integer
    Transfer Mode

h248.pkg.annexc.transrate  TransRate
    Unsigned 8-bit integer
    Transfer Rate

h248.pkg.annexc.uppc  UPPC
    Unsigned 8-bit integer
    User Plane Connection Configuration

h248.pkg.annexc.userrate  Userrate
    Unsigned 8-bit integer
    User Rate

h248.pkg.annexc.v76  V76LogicalChannelParameters
    Byte array
    V76LogicalChannelParameters

h248.pkg.annexc.vci  VCI
    Unsigned 16-bit integer
    Virtual Circuit Identifier

h248.pkg.annexc.vpi  VPI
    Unsigned 16-bit integer
    Virtual Path Identifier
```

#### **H.248 Annex E (h248e)**

```
h248.pkg.al  Analog Line Supervision Package
    Byte array

h248.pkg.al.ev.flashhook.mindur  Minimum duration in ms
    Unsigned 32-bit integer

h248.pkg.al.ev.offhook.strict  strict
    Unsigned 8-bit integer

h248.pkg.al.ev.onhook.init  init
    Boolean

h248.pkg.al.ev.onhook.strict  strict
    Unsigned 8-bit integer

h248.pkg.al.flashhook  flashhook
    Byte array

h248.pkg.al.offhook  offhook
    Byte array
```

```
h248.pkg.al.onhook  onhook
    Byte array
h248.pkg.generic  Generic Package
    Byte array
h248.pkg.generic.cause  Cause Event
    Byte array
h248.pkg.generic.cause.failurecause  Generic Cause
    String
h248.pkg.generic.cause.gencause  Generic Cause
    Unsigned 32-bit integer
h248.pkg.generic.sc  Signal Completion
    Byte array
h248.pkg.generic.sc.meth  Termination Method
    Unsigned 32-bit integer
h248.pkg.generic.sc.rid  Request ID
    Unsigned 32-bit integer
h248.pkg.generic.sc.sig_id  Signal Identity
    Byte array
h248.pkg.generic.sc.slid  Signal List ID
    Unsigned 32-bit integer
h248.pkg.rtp  RTP package
    Byte array
h248.pkg.rtp.stat.ps  Packets Sent
    Unsigned 64-bit integer
    Packets Sent
h248.pkg.tdmc  TDM Circuit Package
    Byte array
h248.pkg.tdmc.ec  Echo Cancellation
    Boolean
    Echo Cancellation
h248.pkg.tdmc.gain  Gain
    Unsigned 32-bit integer
    Gain
```

#### **H.248 MEGACO (h248)**

```

#### **H.248 Q.1950 Annex A (h248q1950)**

```

h248.pkg.BCP  BCP (Bearer characteristics package)
    Byte array

h248.pkg.BNCCT  BNCCT (Bearer network connection cut-through package)
    Byte array

h248.pkg.BT  BT (Bearer control Tunneling)
    Byte array

h248.pkg.BT.BIT  Bearer Information Transport
    Byte array

h248.pkg.BT.TIND  tind (Tunnel INDication)
    Byte array

h248.pkg.BT.TunOpt  Tunnelling Options
    Unsigned 32-bit integer

h248.pkg.GB  GB (Generic bearer connection)
    Byte array

h248.pkg.GB.BNCChang  BNCChange
    Byte array
    This event occurs whenever a change to a Bearer Network connection occurs

h248.pkg.GB.BNCChang.EstBNC  Type
    Byte array
    This signal triggers the bearer control function to send bearer establishment

h248.pkg.GB.BNCChang.RelBNC  RelBNC
    Byte array
    This signal triggers the bearer control function to send bearer release

```

h248.pkg.GB.BNCChang.RelBNC.Failurecause Failurecause  
Byte array  
The Release Cause is the value generated by the Released equipment

h248.pkg.GB.BNCChang.RelBNC.Generalcause Generalcause  
Unsigned 32-bit integer  
This indicates the general reason for the Release

h248.pkg.GB.BNCChang.Type Type  
Unsigned 32-bit integer

h248.pkg.RI RI (Reuse idle package)  
Byte array

h248.pkg.bcg.bcg (Basic call progress tones generator with directionality)  
Byte array

h248.pkg.bcg.bbt bbt (Busy tone)  
Unsigned 8-bit integer

h248.pkg.bcg.bcr bcr (Call ringing tone)  
Unsigned 8-bit integer

h248.pkg.bcg.bct bct (Congestion tone)  
Unsigned 8-bit integer

h248.pkg.bcg.bcw bcw (Call waiting tone)  
Unsigned 8-bit integer

h248.pkg.bcg.bdt bdt (Dial Tone)  
Unsigned 8-bit integer

h248.pkg.bcg.bpt bpt (Payphone recognition tone)  
Unsigned 8-bit integer

h248.pkg.bcg.bpy bpy (Pay tone)  
Unsigned 8-bit integer

h248.pkg.bcg.brt brt (Ringing tone)  
Unsigned 8-bit integer

h248.pkg.bcg.bsit bsit (Special information tone)  
Unsigned 8-bit integer

h248.pkg.bcg.bwt bwt (Warning tone)  
Unsigned 8-bit integer

h248.pkg.bcp.bncchar BNCChar (BNC Characteristics)  
Unsigned 32-bit integer  
BNC Characteristics

h248.pkg.bcp.bncct Bearer network connection cut-through capability  
Unsigned 32-bit integer  
This property allows the MGC to ask the MG when the cut through of a bearer

h248.pkg.bcp.btd btd (Tone Direction)  
Unsigned 32-bit integer  
btd (Tone Direction)

h248.pkg.bcp.rii Reuse Idle Indication  
Unsigned 32-bit integer  
This property indicates that the provided bearer network connection relates

**H.248.10 (h248chp)**

h248.chp.mgcon MGCon

Byte array

This event occurs when the MG requires that the MGC start or finish load red

h248.chp.mgcon.reduction Reduction

Unsigned 32-bit integer

Percentage of the load that the MGC is requested to block

**H.248.7 (h248an)**

h248.an.apf Fixed Announcement Play

Byte array

Initiates the play of a fixed announcement

h248.an.apf.an Announcement name

Unsigned 32-bit integer

h248.an.apf.av Announcement Variant

String

h248.an.apf.di Announcement Direction

Unsigned 32-bit integer

**IEEE 802.11 Radiotap Capture header (radiotap)**

```
radiotap.antenna  Antenna
                  Unsigned 32-bit integer
                  Antenna number this frame was sent/received over (starting at 0)

radiotap.channel  Channel
                  Unsigned 32-bit integer
                  802.11 channel number that this frame was sent/received on

radiotap.channel.freq  Channel frequency
                       Unsigned 32-bit integer
                       Channel frequency in megahertz that this frame was sent/received on

radiotap.channel.type  Channel type
                       Unsigned 16-bit integer
                       Channel type

radiotap.channel.type.2ghz  2 GHz spectrum
                             Boolean
                             Channel Type 2 GHz spectrum

radiotap.channel.type.5ghz  5 GHz spectrum
                             Boolean
                             Channel Type 5 GHz spectrum

radiotap.channel.type.cck  Complementary Code Keying (CCK)
                             Boolean
                             Channel Type Complementary Code Keying (CCK) Modulation
```

```

radiotap.channel.type.dynamic  Dynamic CCK-OFDM
    Boolean
    Channel Type Dynamic CCK-OFDM Channel
radiotap.channel.type.gfsk  Gaussian Frequency Shift Keying (GFSK)
    Boolean
    Channel Type Gaussian Frequency Shift Keying (GFSK) Modulation
radiotap.channel.type.gsm  GSM (900MHz)
    Boolean
    Channel Type GSM
radiotap.channel.type.half  Half Rate Channel (10MHz Channel Width)
    Boolean
    Channel Type Half Rate
radiotap.channel.type.ofdm  Orthogonal Frequency-Division Multiplexing (OFDM)
    Boolean
    Channel Type Orthogonal Frequency-Division Multiplexing (OFDM)
radiotap.channel.type.passive  Passive
    Boolean
    Channel Type Passive
radiotap.channel.type.quarter  Quarter Rate Channel (5MHz Channel Width)
    Boolean
    Channel Type Quarter Rate
radiotap.channel.type.sturbo  Static Turbo
    Boolean
    Channel Type Status Turbo
radiotap.channel.type.turbo  Turbo
    Boolean
    Channel Type Turbo
radiotap.channel.xtype.passive  Passive
    Boolean
    Channel Type Passive
radiotap.datarate  Data rate
    Unsigned 32-bit integer
    Speed this frame was sent/received at
radiotap.db_antnoise  SSI Noise (dB)
    Unsigned 32-bit integer
    RF noise power at the antenna from a fixed, arbitrary value in decibels
radiotap.db_antsignal  SSI Signal (dB)
    Unsigned 32-bit integer
    RF signal power at the antenna from a fixed, arbitrary value in decibels
radiotap.db_txattenuation  Transmit attenuation (dB)
    Unsigned 16-bit integer
    Transmit power expressed as decibels from max power set at factory (0 is max)
radiotap.dbm_antsignal  SSI Signal (dBm)
    Signed 32-bit integer
    RF signal power at the antenna from a fixed, arbitrary value in decibels fro
radiotap.fcs  802.11 FCS
    Unsigned 32-bit integer
    Frame check sequence of this frame

```

```
radiotap.fcs_bad  Bad FCS
  Boolean
  Specifies if this frame has a bad frame check sequence

radiotap.fhss.hopset  FHSS Hop Set
  Unsigned 8-bit integer
  Frequency Hopping Spread Spectrum hopset

radiotap.fhss.pattern  FHSS Pattern
  Unsigned 8-bit integer
  Frequency Hopping Spread Spectrum hop pattern

radiotap.flags  Flags
  Unsigned 8-bit integer

radiotap.flags.badfcs  Bad FCS
  Boolean
  Frame received with bad FCS

radiotap.flags.cfp  CFP
  Boolean
  Sent/Received during CFP

radiotap.flags.datapad  Data Pad
  Boolean
  Frame has padding between 802.11 header and payload

radiotap.flags.fcs  FCS at end
  Boolean
  Frame includes FCS at end

radiotap.flags.frag  Fragmentation
  Boolean
  Sent/Received with fragmentation

radiotap.flags.preamble  Preamble
  Boolean
  Sent/Received with short preamble

radiotap.flags.shortgi  Short GI
  Boolean
  Frame Sent/Received with HT short Guard Interval

radiotap.flags.wep  WEP
  Boolean
  Sent/Received with WEP encryption

radiotap.length  Header length
  Unsigned 16-bit integer
  Length of header including version, pad, length and data fields

radiotap.mactime  MAC timestamp
  Unsigned 64-bit integer
  Value in microseconds of the MAC's Time Synchronization Function timer when

radiotap.pad  Header pad
  Unsigned 8-bit integer
  Padding

radiotap.present  Present flags
  Unsigned 32-bit integer
  Bitmask indicating which fields are present
```

```
radiotap.present.antenna  Antenna
    Boolean
    Specifies if the antenna number field is present
radiotap.present.channel  Channel
    Boolean
    Specifies if the transmit/receive frequency field is present
radiotap.present.db_antnoise  DB Antenna Noise
    Boolean
    Specifies if the RF signal power at antenna in dBm field is present
radiotap.present.db_antsignal  DB Antenna Signal
    Boolean
    Specifies if the RF signal power at antenna in dB field is present
radiotap.present.db_tx_attenuation  DB TX Attenuation
    Boolean
    Specifies if the transmit power from max power (in dB) field is present
radiotap.present.dbm_antnoise  DBM Antenna Noise
    Boolean
    Specifies if the RF noise power at antenna field is present
radiotap.present.dbm_antsignal  DBM Antenna Signal
    Boolean
    Specifies if the antenna signal strength in dBm is present
radiotap.present.dbm_tx_attenuation  DBM TX Attenuation
    Boolean
    Specifies if the transmit power from max power (in dBm) field is present
radiotap.present.ext  Ext
    Boolean
    Specifies if there are any extensions to the header present
radiotap.present.fcs  FCS in header
    Boolean
    Specifies if the FCS field is present
radiotap.present.fhss  FHSS
    Boolean
    Specifies if the hop set and pattern is present for frequency hopping radios
radiotap.present.flags  Flags
    Boolean
    Specifies if the channel flags field is present
radiotap.present.lock_quality  Lock Quality
    Boolean
    Specifies if the signal quality field is present
radiotap.present.rate  Rate
    Boolean
    Specifies if the transmit/receive rate field is present
radiotap.present.tsft  TSFT
    Boolean
    Specifies if the Time Synchronization Function Timer field is present
radiotap.present.tx_attenuation  TX Attenuation
    Boolean
    Specifies if the transmit power from max power field is present
```

```
radiotap.present.xchannel  Channel+
    Boolean
    Specifies if the extended channel info field is present

radiotap.quality  Signal Quality
    Unsigned 16-bit integer
    Signal quality (unitless measure)

radiotap.txattenuation  Transmit attenuation
    Unsigned 16-bit integer
    Transmit power expressed as unitless distance from max power set at factory

radiotap.txpower  Transmit power
    Signed 32-bit integer
    Transmit power in decibels per one milliwatt (dBm)

radiotap.version  Header revision
    Unsigned 8-bit integer
    Version of radiotap header format

radiotap.xchannel  Channel number
    Unsigned 32-bit integer

radiotap.xchannel.flags  Channel type
    Unsigned 32-bit integer

radiotap.xchannel.freq  Channel frequency
    Unsigned 32-bit integer

radiotap.xchannel.type.2ghz  2 GHz spectrum
    Boolean
    Channel Type 2 GHz spectrum

radiotap.xchannel.type.5ghz  5 GHz spectrum
    Boolean
    Channel Type 5 GHz spectrum

radiotap.xchannel.type.cck  Complementary Code Keying (CCK)
    Boolean
    Channel Type Complementary Code Keying (CCK) Modulation

radiotap.xchannel.type.dynamic  Dynamic CCK-OFDM
    Boolean
    Channel Type Dynamic CCK-OFDM Channel

radiotap.xchannel.type.gfsk  Gaussian Frequency Shift Keying (GFSK)
    Boolean
    Channel Type Gaussian Frequency Shift Keying (GFSK) Modulation

radiotap.xchannel.type.gsm  GSM (900MHz)
    Boolean
    Channel Type GSM

radiotap.xchannel.type.half  Half Rate Channel (10MHz Channel Width)
    Boolean
    Channel Type Half Rate

radiotap.xchannel.type.ht20  HT Channel (20MHz Channel Width)
    Boolean
    Channel Type HT/20
```

```

radiotap.xchannel.type.ht40d  HT Channel (40MHz Channel Width with Extension cha
    Boolean
    Channel Type HT/40-
radiotap.xchannel.type.ht40u  HT Channel (40MHz Channel Width with Extension cha
    Boolean
    Channel Type HT/40+
radiotap.xchannel.type.ofdm  Orthogonal Frequency-Division Multiplexing (OFDM)
    Boolean
    Channel Type Orthogonal Frequency-Division Multiplexing (OFDM)
radiotap.xchannel.type.quarter  Quarter Rate Channel (5MHz Channel Width)
    Boolean
    Channel Type Quarter Rate
radiotap.xchannel.type.sturbo  Static Turbo
    Boolean
    Channel Type Status Turbo
radiotap.xchannel.type.turbo  Turbo
    Boolean
    Channel Type Turbo

```

**IEEE 802.11 wireless LAN (wlan)**

```

radiotap.dbm_antnoise  SSI Noise (dBm)
    Signed 32-bit integer
    RF noise power at the antenna from a fixed, arbitrary value in decibels per
wlan.addr  Source or Destination address
    6-byte Hardware (MAC) Address
    Source or Destination Hardware Address
wlan.aid  Association ID
    Unsigned 16-bit integer
    Association-ID field
wlan.analysis.retransmission  Retransmission
    No value
    This frame is a suspected wireless retransmission
wlan.analysis.retransmission_frame  Retransmission of frame
    Frame number
    This is a retransmission of frame #
wlan.antenna  Antenna
    Unsigned 32-bit integer
    Antenna number this frame was sent/received over (starting at 0)
wlan.ba.basic.tidinfo  TID for which a Basic BlockAck frame is requested
    Unsigned 16-bit integer
    Traffic Identifier (TID) for which a Basic BlockAck frame is requested
wlan.ba.control  Block Ack Request Control
    Unsigned 16-bit integer
    Block Ack Request Control
wlan.ba.control.ackpolicy  BAR Ack Policy
    Boolean
    Block Ack Request (BAR) Ack Policy

```

```
wlan.ba.control.cbitmap  Compressed Bitmap
    Boolean
    Compressed Bitmap

wlan.ba.control.multitid  Multi-TID
    Boolean
    Multi-Traffic Identifier (TID)

wlan.ba.mtid.tid  Traffic Identifier (TID) Info
    Unsigned 8-bit integer
    Traffic Identifier (TID) Info

wlan.ba.mtid.tidinfo  Number of TIDs Present
    Unsigned 16-bit integer
    Number of Traffic Identifiers (TIDs) Present

wlan.ba.type  Block Ack Request Type
    Unsigned 8-bit integer
    Block Ack Request Type

wlan.bar.compressed.tidinfo  TID for which a BlockAck frame is requested
    Unsigned 16-bit integer
    Traffic Identifier (TID) for which a BlockAck frame is requested

wlan.bar.control  Block Ack Request (BAR) Control
    Unsigned 16-bit integer
    Block Ack Request (BAR) Control

wlan.bar.mtid.tidinfo.reserved  Reserved
    Unsigned 16-bit integer
    Reserved

wlan.bar.mtid.tidinfo.value  Multi-TID Value
    Unsigned 16-bit integer
    Multi-TID Value

wlan.bar.type  Block Ack Request Type
    Unsigned 8-bit integer
    Block Ack Request (BAR) Type

wlan.bssid  BSS Id
    6-byte Hardware (MAC) Address
    Basic Service Set ID

wlan.ccmp.extiv  CCMP Ext. Initialization Vector
    String
    CCMP Extended Initialization Vector

wlan.channel  Channel
    Unsigned 8-bit integer
    802.11 channel number that this frame was sent/received on

wlan.channel_frequency  Channel frequency
    Unsigned 32-bit integer
    Channel frequency in megahertz that this frame was sent/received on

wlan.controlwrap.addr1  First Address of Contained Frame
    6-byte Hardware (MAC) Address
    First Address of Contained Frame

wlan.da  Destination address
    6-byte Hardware (MAC) Address
    Destination Hardware Address
```

```
wlan.data_rate  Data Rate
  Unsigned 64-bit integer
  Data rate (b/s)

wlan.dbm_antsignal  SSI Signal (dBm)
  Signed 32-bit integer
  RF signal power at the antenna from a fixed, arbitrary value in decibels from

wlan.duration  Duration
  Unsigned 16-bit integer
  Duration field

wlan.fc  Frame Control Field
  Unsigned 16-bit integer
  MAC Frame control

wlan.fc.ds  DS status
  Unsigned 8-bit integer
  Data-frame DS-traversal status

wlan.fc.frag  More Fragments
  Boolean
  More Fragments flag

wlan.fc.fromds  From DS
  Boolean
  From DS flag

wlan.fc.moredata  More Data
  Boolean
  More data flag

wlan.fc.order  Order flag
  Boolean
  Strictly ordered flag

wlan.fc.protected  Protected flag
  Boolean
  Protected flag

wlan.fc.pwrmtgt  PWR MGT
  Boolean
  Power management status

wlan.fc.retry  Retry
  Boolean
  Retransmission flag

wlan.fc.subtype  Subtype
  Unsigned 8-bit integer
  Frame subtype

wlan.fc.tods  To DS
  Boolean
  To DS flag

wlan.fc.type  Type
  Unsigned 8-bit integer
  Frame type

wlan.fc.type_subtype  Type/Subtype
  Unsigned 8-bit integer
  Type and subtype combined (first byte: type, second byte: subtype)
```

```
wlan.fc.version  Version
    Unsigned 8-bit integer
    MAC Protocol version

wlan.fcs  Frame check sequence
    Unsigned 32-bit integer
    Frame Check Sequence (FCS)

wlan.fcs_bad  Bad
    Boolean
    True if the FCS is incorrect

wlan.fcs_good  Good
    Boolean
    True if the FCS is correct

wlan.flags  Protocol Flags
    Unsigned 8-bit integer
    Protocol flags

wlan.frag  Fragment number
    Unsigned 16-bit integer
    Fragment number

wlan.fragment  802.11 Fragment
    Frame number
    802.11 Fragment

wlan.fragment.error  Defragmentation error
    Frame number
    Defragmentation error due to illegal fragments

wlan.fragment.multipletails  Multiple tail fragments found
    Boolean
    Several tails were found when defragmenting the packet

wlan.fragment.overlap  Fragment overlap
    Boolean
    Fragment overlaps with other fragments

wlan.fragment.overlap.conflict  Conflicting data in fragment overlap
    Boolean
    Overlapping fragments contained conflicting data

wlan.fragment.toolongfragment  Fragment too long
    Boolean
    Fragment contained data past end of packet

wlan.fragments  802.11 Fragments
    No value
    802.11 Fragments

wlan.hosttime  Host timestamp
    Unsigned 64-bit integer

wlan.mactime  MAC timestamp
    Unsigned 64-bit integer
    Value in microseconds of the MAC's Time Synchronization Function timer when

wlan.normrssi_antnoise  Normalized RSSI Noise
    Unsigned 32-bit integer
    RF noise power at the antenna, normalized to the range 0-1000
```

```
wlan.normrssi_antsignal Normalized RSSI Signal
    Unsigned 32-bit integer
    RF signal power at the antenna, normalized to the range 0-1000

wlan.qos.ack Ack Policy
    Unsigned 8-bit integer
    Ack Policy

wlan.qos.amsdupresent Payload Type
    Boolean
    Payload Type

wlan.qos.eosp EOSP
    Boolean
    EOSP Field

wlan.qos.fc_content Content
    Unsigned 16-bit integer
    Content1

wlan.qos.priority Priority
    Unsigned 16-bit integer
    802.1D Tag

wlan.ra Receiver address
    6-byte Hardware (MAC) Address
    Receiving Station Hardware Address

wlan.rawrssi_antnoise Raw RSSI Noise
    Unsigned 32-bit integer
    RF noise power at the antenna, reported as RSSI by the adapter

wlan.rawrssi_antsignal Raw RSSI Signal
    Unsigned 32-bit integer
    RF signal power at the antenna, reported as RSSI by the adapter

wlan.reassembled_in Reassembled 802.11 in frame
    Frame number
    This 802.11 packet is reassembled in this frame

wlan.sa Source address
    6-byte Hardware (MAC) Address
    Source Hardware Address

wlan.seq Sequence number
    Unsigned 16-bit integer
    Sequence number

wlan.signal_strength Signal Strength
    Unsigned 8-bit integer
    Signal strength (Percentage)

wlan.ta Transmitter address
    6-byte Hardware (MAC) Address
    Transmitting Station Hardware Address

wlan.tkip.extiv TKIP Ext. Initialization Vector
    String
    TKIP Extended Initialization Vector

wlan.wep.icv WEP ICV
    Unsigned 32-bit integer
    WEP ICV
```

wlan.wep.iv Initialization Vector  
Unsigned 24-bit integer  
Initialization Vector

wlan.wep.key Key Index  
Unsigned 8-bit integer  
Key Index

wlan.wep.weakiv Weak IV  
Boolean  
Weak IV

**IEEE 802.11 wireless LAN aggregate frame (wlan\_aggregate)**

wlan\_aggregate.msduheader MAC Service Data Unit (MSDU)  
Unsigned 16-bit integer  
MAC Service Data Unit (MSDU)

**IEEE 802.11 wireless LAN management frame (wlan\_mgt)**

wlan\_mgt.aironet.data Aironet IE data  
Byte array  
Aironet IE data

wlan\_mgt.aironet.qos.paramset Aironet IE QoS paramset  
Unsigned 8-bit integer  
Aironet IE QoS paramset

wlan\_mgt.aironet.qos.unkl Aironet IE QoS unknown 1  
Unsigned 8-bit integer  
Aironet IE QoS unknown 1

wlan\_mgt.aironet.qos.val Aironet IE QoS valueset  
Byte array  
Aironet IE QoS valueset

wlan\_mgt.aironet.type Aironet IE type  
Unsigned 8-bit integer  
Aironet IE type

wlan\_mgt.aironet.version Aironet IE CCX version?  
Unsigned 8-bit integer  
Aironet IE CCX version?

wlan\_mgt.asel Antenna Selection (ASEL) Capabilities  
Unsigned 8-bit integer  
Antenna Selection (ASEL) Capabilities

wlan\_mgt.asel.capable Antenna Selection Capable  
Boolean  
Antenna Selection Capable

wlan\_mgt.asel.csi Explicit CSI Feedback  
Boolean  
Explicit CSI Feedback

wlan\_mgt.asel.if Antenna Indices Feedback  
Boolean  
Antenna Indices Feedback

```
wlan_mgt.asel.reserved  Reserved
    Unsigned 8-bit integer
    Reserved

wlan_mgt.asel.rx  Rx ASEL
    Boolean
    Rx ASEL

wlan_mgt.asel.sppdu  Tx Sounding PPDUs
    Boolean
    Tx Sounding PPDUs

wlan_mgt.asel.txcsi  Explicit CSI Feedback Based Tx ASEL
    Boolean
    Explicit CSI Feedback Based Tx ASEL

wlan_mgt.asel.txif  Antenna Indices Feedback Based Tx ASEL
    Boolean
    Antenna Indices Feedback Based Tx ASEL

wlan_mgt.extcap.infoexchange  HT Information Exchange Support
    Unsigned 8-bit integer
    HT Information Exchange Support

wlan_mgt.extchanswitch.new.channumber  New Channel Number
    Unsigned 8-bit integer
    New Channel Number

wlan_mgt.extchanswitch.new.regclass  New Regulatory Class
    Unsigned 8-bit integer
    New Regulatory Class

wlan_mgt.extchanswitch.switchcount  Channel Switch Count
    Unsigned 8-bit integer
    Channel Switch Count

wlan_mgt.extchanswitch.switchmode  Channel Switch Mode
    Unsigned 8-bit integer
    Channel Switch Mode

wlan_mgt.fixed.action  Action
    Unsigned 8-bit integer
    Action

wlan_mgt.fixed.action_code  Action code
    Unsigned 16-bit integer
    Management action code

wlan_mgt.fixed.aid  Association ID
    Unsigned 16-bit integer
    Association ID

wlan_mgt.fixed.all  Fixed parameters
    Unsigned 16-bit integer
    Fixed parameters

wlan_mgt.fixed.antsel  Antenna Selection
    Unsigned 8-bit integer
    Antenna Selection

wlan_mgt.fixed.antsel.ant0  Antenna 0
    Unsigned 8-bit integer
    Antenna 0
```

```
wlan_mgt.fixed.antsel.ant1  Antenna 1
    Unsigned 8-bit integer
    Antenna 1
wlan_mgt.fixed.antsel.ant2  Antenna 2
    Unsigned 8-bit integer
    Antenna 2
wlan_mgt.fixed.antsel.ant3  Antenna 3
    Unsigned 8-bit integer
    Antenna 3
wlan_mgt.fixed.antsel.ant4  Antenna 4
    Unsigned 8-bit integer
    Antenna 4
wlan_mgt.fixed.antsel.ant5  Antenna 5
    Unsigned 8-bit integer
    Antenna 5
wlan_mgt.fixed.antsel.ant6  Antenna 6
    Unsigned 8-bit integer
    Antenna 6
wlan_mgt.fixed.antsel.ant7  Antenna 7
    Unsigned 8-bit integer
    Antenna 7
wlan_mgt.fixed.auth.alg     Authentication Algorithm
    Unsigned 16-bit integer
    Authentication Algorithm
wlan_mgt.fixed.auth_seq     Authentication SEQ
    Unsigned 16-bit integer
    Authentication Sequence Number
wlan_mgt.fixed.baparams     Block Ack Parameters
    Unsigned 16-bit integer
    Block Ack Parameters
wlan_mgt.fixed.baparams.amsdu  A-MSDUs
    Boolean
    A-MSDU Permitted in QoS Data MPDUs
wlan_mgt.fixed.baparams.buffersize  Number of Buffers (1 Buffer = 2304 Bytes)
    Unsigned 16-bit integer
    Number of Buffers
wlan_mgt.fixed.baparams.policy  Block Ack Policy
    Boolean
    Block Ack Policy
wlan_mgt.fixed.baparams.tid     Traffic Identifier
    Unsigned 8-bit integer
    Traffic Identifier
wlan_mgt.fixed.batimeout     Block Ack Timeout
    Unsigned 16-bit integer
    Block Ack Timeout
wlan_mgt.fixed.beacon        Beacon Interval
    Double-precision floating point
    Beacon Interval
```

```
wlan_mgt.fixed.capabilities  Capabilities
    Unsigned 16-bit integer
    Capability information

wlan_mgt.fixed.capabilities.agility  Channel Agility
    Boolean
    Channel Agility

wlan_mgt.fixed.capabilities.apsd  Automatic Power Save Delivery
    Boolean
    Automatic Power Save Delivery

wlan_mgt.fixed.capabilities.cfpoll.ap  CFP participation capabilities
    Unsigned 16-bit integer
    CF-Poll capabilities for an AP

wlan_mgt.fixed.capabilities.cfpoll.sta  CFP participation capabilities
    Unsigned 16-bit integer
    CF-Poll capabilities for a STA

wlan_mgt.fixed.capabilities.del_blk_ack  Delayed Block Ack
    Boolean
    Delayed Block Ack

wlan_mgt.fixed.capabilities.dsss_ofdm  DSSS-OFDM
    Boolean
    DSSS-OFDM Modulation

wlan_mgt.fixed.capabilities.ess  ESS capabilities
    Boolean
    ESS capabilities

wlan_mgt.fixed.capabilities.ibss  IBSS status
    Boolean
    IBSS participation

wlan_mgt.fixed.capabilities.imm_blk_ack  Immediate Block Ack
    Boolean
    Immediate Block Ack

wlan_mgt.fixed.capabilities.pbcc  PBCC
    Boolean
    PBCC Modulation

wlan_mgt.fixed.capabilities.preamble  Short Preamble
    Boolean
    Short Preamble

wlan_mgt.fixed.capabilities.privacy  Privacy
    Boolean
    WEP support

wlan_mgt.fixed.capabilities.short_slot_time  Short Slot Time
    Boolean
    Short Slot Time

wlan_mgt.fixed.capabilities.spec_man  Spectrum Management
    Boolean
    Spectrum Management

wlan_mgt.fixed.category_code  Category code
    Unsigned 16-bit integer
    Management action category
```

```
wlan_mgt.fixed.chanwidth Supported Channel Width
    Unsigned 8-bit integer
    Supported Channel Width

wlan_mgt.fixed.country Country String
    String
    Country String

wlan_mgt.fixed.current_ap Current AP
    6-byte Hardware (MAC) Address
    MAC address of current AP

wlan_mgt.fixed.delba.param Delete Block Ack (DELBA) Parameter Set
    Unsigned 16-bit integer
    Delete Block Ack (DELBA) Parameter Set

wlan_mgt.fixed.delba.param.initiator Initiator
    Boolean
    Initiator

wlan_mgt.fixed.delba.param.reserved Reserved
    Unsigned 16-bit integer
    Reserved

wlan_mgt.fixed.delba.param.tid TID
    Unsigned 16-bit integer
    Traffic Identifier (TID)

wlan_mgt.fixed.dialog_token Dialog token
    Unsigned 8-bit integer
    Management action dialog token

wlan_mgt.fixed.dls_timeout DLS timeout
    Unsigned 16-bit integer
    DLS timeout value

wlan_mgt.fixed.dst_mac_addr Destination address
    6-byte Hardware (MAC) Address
    Destination MAC address

wlan_mgt.fixed.extchansw Extended Channel Switch Announcement
    Unsigned 32-bit integer

wlan_mgt.fixed.fragment Fragment
    Unsigned 16-bit integer
    Fragment

wlan_mgt.fixed.htact HT Action
    Unsigned 8-bit integer
    HT Action Code

wlan_mgt.fixed.listen_ival Listen Interval
    Unsigned 16-bit integer
    Listen Interval

wlan_mgt.fixed.maxregpwr Maximum Regulation Power
    Unsigned 16-bit integer
    Maximum Regulation Power

wlan_mgt.fixed.maxtxpwr Maximum Transmit Power
    Unsigned 8-bit integer
    Maximum Transmit Power
```

```
wlan_mgt.fixed.mimo.control.chanwidth  Channel Width
    Boolean
    Channel Width

wlan_mgt.fixed.mimo.control.codebookinfo  Codebook Information
    Unsigned 16-bit integer
    Codebook Information

wlan_mgt.fixed.mimo.control.cosize  Coefficient Size (Nb)
    Unsigned 16-bit integer
    Coefficient Size (Nb)

wlan_mgt.fixed.mimo.control.grouping  Grouping (Ng)
    Unsigned 16-bit integer
    Grouping (Ng)

wlan_mgt.fixed.mimo.control.matrixseg  Remaining Matrix Segment
    Unsigned 16-bit integer
    Remaining Matrix Segment

wlan_mgt.fixed.mimo.control.ncindex  Nc Index
    Unsigned 16-bit integer
    Number of Columns Less One

wlan_mgt.fixed.mimo.control.nrindex  Nr Index

    Unsigned 32-bit integer
    Minimum Service Interval

wlan_mgt.tspec.nor_msdu   Normal MSDU Size
    Unsigned 16-bit integer
    Normal MSDU Size

wlan_mgt.tspec.peak_data  Peak Data Rate
    Unsigned 32-bit integer
    Peak Data Rate

wlan_mgt.tspec.srv_start  Service Start Time
    Unsigned 32-bit integer
    Service Start Time

wlan_mgt.tspec.surplus    Surplus Bandwidth Allowance
    Unsigned 16-bit integer
    Surplus Bandwidth Allowance

wlan_mgt.tspec.susp_int   Suspension Interval
    Unsigned 32-bit integer
    Suspension Interval

wlan_mgt.txbf             Transmit Beam Forming (TxBF) Capabilities
    Unsigned 16-bit integer
    Transmit Beam Forming (TxBF) Capabilities

wlan_mgt.txbf.calibration Calibration
    Unsigned 32-bit integer
    Calibration

wlan_mgt.txbf.channelest  Maximum number of space time streams for which channel
    Unsigned 32-bit integer
    Maximum number of space time streams for which channel dimensions can be sim

wlan_mgt.txbf.csi         STA can apply TxBF using CSI explicit feedback
    Boolean
    Station can apply TxBF using CSI explicit feedback

wlan_mgt.txbf.csi.maxrows Maximum number of rows of CSI explicit feedback
    Unsigned 32-bit integer
    Maximum number of rows of CSI explicit feedback

wlan_mgt.txbf.csinumant   Max antennae STA can support when CSI feedback required
    Unsigned 32-bit integer
    Max antennae station can support when CSI feedback required
```

wlan\_mgt.txbf.fm.compressed.bf STA can compress and use compressed Beamforming  
Unsigned 32-bit integer  
Station can compress and use compressed Beamforming Feedback Matrix

wlan\_mgt.txbf.fm.compressed.maxant Max antennae STA can support when compressed  
Unsigned 32-bit integer  
Max antennae station can support when compressed Beamforming feedback require

wlan\_mgt.txbf.fm.compressed.tbf STA can apply TxBF using compressed beamforming  
Boolean  
Station can apply TxBF using compressed beamforming feedback matrix

wlan\_mgt.txbf.fm.uncompressed.maxant Max antennae STA can support when uncompressed  
Unsigned 32-bit integer  
Max antennae station can support when uncompressed Beamforming feedback require

wlan\_mgt.txbf.fm.uncompressed.rbf Receiver can return explicit uncompressed Beamforming  
Unsigned 32-bit integer  
Receiver can return explicit uncompressed Beamforming Feedback Matrix

wlan\_mgt.txbf.fm.uncompressed.tbf STA can apply TxBF using uncompressed beamforming  
Boolean  
Station can apply TxBF using uncompressed beamforming feedback matrix

wlan\_mgt.txbf.impltxbf Implicit TxBF capable  
Boolean  
Implicit Transmit Beamforming (TxBF) capable

wlan\_mgt.txbf.mingroup Minimal grouping used for explicit feedback reports  
Unsigned 32-bit integer  
Minimal grouping used for explicit feedback reports

wlan\_mgt.txbf.rcsi Receiver can return explicit CSI feedback  
Unsigned 32-bit integer  
Receiver can return explicit CSI feedback

wlan\_mgt.txbf.reserved Reserved  
Unsigned 32-bit integer  
Reserved

wlan\_mgt.txbf.rxndp Receive Null Data packet (NDP)  
Boolean  
Receive Null Data packet (NDP)

wlan\_mgt.txbf.rxss Receive Staggered Sounding  
Boolean  
Receive Staggered Sounding

wlan\_mgt.txbf.txbf Transmit Beamforming  
Boolean  
Transmit Beamforming

wlan\_mgt.txbf.txndp Transmit Null Data packet (NDP)  
Boolean  
Transmit Null Data packet (NDP)

wlan\_mgt.txbf.txss Transmit Staggered Sounding  
Boolean  
Transmit staggered sounding

wlan\_mgt.vs.asel Antenna Selection (ASEL) Capabilities (VS)  
Unsigned 8-bit integer  
Vendor Specific Antenna Selection (ASEL) Capabilities

wlan\_mgt.vs.ht.ampduparam A-MPDU Parameters (VS)  
 Unsigned 16-bit integer  
 Vendor Specific A-MPDU Parameters

wlan\_mgt.vs.ht.capabilities HT Capabilities Info (VS)  
 Unsigned 16-bit integer  
 Vendor Specific HT Capability information

wlan\_mgt.vs.ht.mcsset Rx Supported Modulation and Coding Scheme Set (VS)  
 String  
 Vendor Specific Rx Supported Modulation and Coding Scheme Set

wlan\_mgt.vs.htex.capabilities HT Extended Capabilities (VS)  
 Unsigned 16-bit integer  
 Vendor Specific HT Extended Capability information

wlan\_mgt.vs.txbf Transmit Beam Forming (TxBF) Capabilities (VS)  
 Unsigned 16-bit integer  
 Vendor Specific Transmit Beam Forming (TxBF) Capabilities

#### IEEE 802.15.4 Low-Rate Wireless PAN (wpan)

wpan.ack\_request Acknowledge Request  
 Boolean  
 Whether the sender of this packet requests acknowledgement or not.

wpan.bcn.assoc\_permit Association Permit  
 Boolean  
 Whether this PAN is accepting association requests or not.

wpan.bcn.battery\_ext Battery Extension  
 Boolean  
 Whether transmissions may not extend past the length of the beacon frame.

wpan.bcn.beacon\_order Beacon Interval  
 Unsigned 8-bit integer  
 Specifies the transmission interval of the beacons.

wpan.bcn.cap Final CAP Slot  
 Unsigned 8-bit integer  
 Specifies the final superframe slot used by the CAP.

wpan.bcn.coord PAN Coordinator  
 Boolean  
 Whether this beacon frame is being transmitted by the PAN coordinator or not.

wpan.bcn.gts.count GTS Descriptor Count  
 Unsigned 8-bit integer  
 The number of GTS descriptors present in this beacon frame.

wpan.bcn.gts.direction Direction  
 Boolean  
 A flag defining the direction of the GTS Slot.

wpan.bcn.gts.permit GTS Permit  
 Boolean  
 Whether the PAN coordinator is accepting GTS requests or not.

wpan.bcn.pending16 Address  
 Unsigned 16-bit integer  
 Device with pending data to receive.

wpan.bcn.pending64 Address  
Unsigned 64-bit integer  
Device with pending data to receive.

wpan.bcn.superframe\_order Superframe Interval  
Unsigned 8-bit integer  
Specifies the length of time the coordinator will interact with the PAN.

wpan.cmd.asrsp.addr Short Address  
Unsigned 16-bit integer  
The short address that the device should assume. An address of 0xffff indicates that the device should use the short address of the coordinator.

wpan.cmd.asrsp.status Association Status  
Unsigned 8-bit integer

wpan.cmd.cinfo.alloc\_addr Allocate Address  
Boolean  
Whether this device wishes to use a 16-bit short address instead of its IEEE 802.15.4 address.

wpan.cmd.cinfo.alt\_coord Alternate PAN Coordinator  
Boolean  
Whether this device can act as a PAN coordinator or not.

wpan.cmd.cinfo.device\_type Device Type  
Boolean  
Whether this device is RFD (reduced-function device) or FFD (full-function device).

wpan.cmd.cinfo.idle\_rx Receive On When Idle  
Boolean  
Whether this device can receive packets while idle or not.

wpan.cmd.cinfo.power\_src Power Source  
Boolean  
Whether this device is operating on AC/mains or battery power.

wpan.cmd.cinfo.sec\_capable Security Capability  
Boolean  
Whether this device is capable of receiving encrypted packets.

wpan.cmd.coord.addr Coordinator Short Address  
Unsigned 16-bit integer  
The 16-bit address the coordinator wishes to use for future communication.

wpan.cmd.coord.channel Logical Channel  
Unsigned 8-bit integer  
The logical channel the coordinator wishes to use for future communication.

wpan.cmd.coord.channel\_page Channel Page  
Unsigned 8-bit integer  
The logical channel page the coordinator wishes to use for future communication.

wpan.cmd.coord.pan PAN ID  
Unsigned 16-bit integer  
The PAN identifier the coordinator wishes to use for future communication.

wpan.cmd.disas.reason Disassociation Reason  
Unsigned 8-bit integer

wpan.cmd.gts.direction GTS Direction  
Boolean  
The direction of traffic in the guaranteed timeslot.

wpan.cmd.gts.length GTS Length  
Unsigned 8-bit integer  
Number of superframe slots the device is requesting.

wpan.cmd.gts.type Characteristic Type  
Boolean  
Whether this request is to allocate or deallocate a timeslot.

wpan.cmd.id Command Identifier  
Unsigned 8-bit integer

wpan.correlation LQI Correlation Value  
Unsigned 8-bit integer

wpan.dst\_addr16 Destination  
Unsigned 16-bit integer

wpan.dst\_addr64 Destination  
Unsigned 64-bit integer

wpan.dst\_addr\_mode Destination Addressing Mode  
Unsigned 16-bit integer

wpan.dst\_pan Destination PAN  
Unsigned 16-bit integer

wpan.fcs FCS  
Unsigned 16-bit integer

wpan.fcs\_ok FCS Valid  
Boolean

wpan.frame\_type Frame Type  
Unsigned 16-bit integer

wpan.intra\_pan Intra-PAN  
Boolean  
Whether this packet originated and terminated within the same PAN or not.

wpan.pending Frame Pending  
Boolean  
Indication of additional packets waiting to be transferred from the source d

wpan.rssi RSSI  
Signed 8-bit integer  
Received Signal Strength

wpan.security Security Enabled  
Boolean  
Whether security operations are performed at the MAC layer or not.

wpan.seq\_no Sequence Number  
Unsigned 8-bit integer

wpan.src\_addr16 Source  
Unsigned 16-bit integer

wpan.src\_addr64 Source  
Unsigned 64-bit integer

wpan.src\_addr\_mode Source Addressing Mode  
Unsigned 16-bit integer

wpan.src\_pan Source PAN  
Unsigned 16-bit integer

wpan.version Frame Version  
Unsigned 16-bit integer

Boolean

isup.forw\_call\_end\_to\_end\_method\_indicator End-to-end method indicator  
Unsigned 16-bit integer

isup.forw\_call\_interworking\_indicator Interworking indicator  
Boolean

```
isup.forw_call_isdn_access_indicator  ISDN access indicator
    Boolean
isup.forw_call_isdn_user_part_indicator  ISDN user part indicator
    Boolean
isup.forw_call_natnl_inatnl_call_indicator  National/international call indicator
    Boolean
isup.forw_call_ported_num_trans_indicator  Ported number translation indicator
    Boolean
isup.forw_call_preferences_indicator  ISDN user part preference indicator
    Unsigned 16-bit integer
isup.forw_call_sccp_method_indicator  SCCP method indicator
    Unsigned 16-bit integer
isup.hold_provided_indicator  Hold provided indicator
    Boolean
isup.hw_blocking_state  HW blocking state
    Unsigned 8-bit integer
isup.inband_information_ind  In-band information indicator
    Boolean
isup.info_req_holding_indicator  Holding indicator
    Boolean
isup.inn_indicator  INN indicator
    Boolean
isup.isdn_generic_name_availability  Availability indicator
    Boolean
isup.isdn_generic_name_ia5  Generic Name
    String
isup.isdn_generic_name_presentation  Presentation indicator
    Unsigned 8-bit integer
isup.isdn_generic_name_type  Type indicator
    Unsigned 8-bit integer
isup.isdn_odd_even_indicator  Odd/even indicator
    Boolean
isup.loop_prevention_response_ind  Response indicator
    Unsigned 8-bit integer
isup.malicious_call_ident_request_indicator  Malicious call identification request
    Boolean
isup.mandatory_variable_parameter_pointer  Pointer to Parameter
    Unsigned 8-bit integer
isup.map_type  Map Type
    Unsigned 8-bit integer
isup.message_type  Message Type
    Unsigned 8-bit integer
isup.mlpp_user  MLPP user indicator
    Boolean
```

```
isup.mtc_blocking_state  Maintenance blocking state
    Unsigned 8-bit integer
isup.network_identification_plan  Network identification plan
    Unsigned 8-bit integer
isup.ni_indicator  NI indicator
    Boolean
isup.numbering_plan_indicator  Numbering plan indicator
    Unsigned 8-bit integer
isup.optional_parameter_part_pointer  Pointer to optional parameter part
    Unsigned 8-bit integer
isup.orig_addr_len  Originating Address length
    Unsigned 8-bit integer
    Originating Address length
isup.original_redirection_reason  Original redirection reason
    Unsigned 16-bit integer
isup.parameter_length  Parameter Length
    Unsigned 8-bit integer
isup.parameter_type  Parameter Type
    Unsigned 8-bit integer
isup.range_indicator  Range indicator
    Unsigned 8-bit integer
isup.redirecting  ISUP Redirecting Number
    String
isup.redirecting_ind  Redirection indicator
    Unsigned 16-bit integer
isup.redirection_counter  Redirection counter
    Unsigned 16-bit integer
isup.redirection_reason  Redirection reason
    Unsigned 16-bit integer

cotp.destref Destination reference  
Unsigned 16-bit integer  
Destination address reference

cotp.dst-tsap Destination TSAP  
String  
Called TSAP

cotp.dst-tsap-bytes Destination TSAP  
Byte array  
Called TSAP (bytes representation)

cotp.eot Last data unit  
Boolean  
Is current TPDU the last data unit of a complete DT TPDU sequence (End of TSAP)

cotp.li Length  
Unsigned 8-bit integer  
Length Indicator, length of this header

cotp.next-tpdu-number Your TPDU number  
Unsigned 8-bit integer  
Your TPDU number

cotp.reassembled\_in Reassembled COTP in frame  
Frame number  
This COTP packet is reassembled in this frame

cotp.segment COTP Segment  
Frame number  
COTP Segment

cotp.segment.error Reassembly error  
Frame number  
Reassembly error due to illegal segments

cotp.segment.multipletails Multiple tail segments found  
Boolean  
Several tails were found when reassembling the packet

cotp.segment.overlap Segment overlap  
Boolean  
Segment overlaps with other segments

cotp.segment.overlap.conflict Conflicting data in segment overlap  
Boolean  
Overlapping segments contained conflicting data

cotp.segment.toolongsegment Segment too long  
Boolean  
Segment contained data past end of packet

cotp.segments COTP Segments  
No value  
COTP Segments

```
cotp.src-tsap   Source TSAP
                String
                Calling TSAP

cotp.src-tsap-bytes   Source TSAP
                    Byte array
                    Calling TSAP (bytes representation)

cotp.srcref   Source reference
              Unsigned 16-bit integer
              Source address reference

cotp.tpdu-number   TPDU number

  Frame number
  This CLNP packet is reassembled in this frame

clnp.segment       CLNP Segment
  Frame number
  CLNP Segment

clnp.segment.error  Reassembly error
  Frame number
  Reassembly error due to illegal segments
```

```
clnp.segment.multipletails  Multiple tail segments found
    Boolean
    Several tails were found when reassembling the packet
clnp.segment.overlap  Segment overlap
    Boolean
    Segment overlaps with other segments
clnp.segment.overlap.conflict  Conflicting data in segment overlap
    Boolean
    Overlapping segments contained conflicting data
clnp.segment.toolongsegment  Segment too long
    Boolean
    Segment contained data past end of packet
clnp.segments  CLNP Segments
    No value
    CLNP Segments
clnp.ssap  SA
    Byte array
clnp.ssap.len  SAL
    Unsigned 8-bit integer
clnp.ttl  Holding Time
    Unsigned 8-bit integer
clnp.type  PDU Type
    Unsigned 8-bit integer
clnp.version  Version
    Unsigned 8-bit integer
```

**ISO 8571 FTAM (ftam)**

```

Unsigned 8-bit integer

x224.nr NR  
Unsigned 8-bit integer

x224.src\_ref SRC-REF  
Unsigned 16-bit integer

**ITU-T Recommendation H.223 (h223)**

h223.al.fragment H.223 AL-PDU Fragment  
Frame number  
H.223 AL-PDU Fragment

h223.al.fragment.error Defragmentation error  
Frame number  
Defragmentation error due to illegal fragments

h223.al.fragment.multipletails Multiple tail fragments found  
Boolean  
Several tails were found when defragmenting the packet

h223.al.fragment.overlap Fragment overlap  
Boolean  
Fragment overlaps with other fragments

h223.al.fragment.overlap.conflict Conflicting data in fragment overlap  
Boolean  
Overlapping fragments contained conflicting data

h223.al.fragment.toolongfragment Fragment too long  
Boolean  
Fragment contained data past end of packet

h223.al.fragments H.223 AL-PDU Fragments  
No value  
H.223 AL-PDU Fragments

h223.al.payload H.223 AL Payload  
No value  
H.223 AL-PDU Payload

h223.al.reassembled\_in AL-PDU fragment, reassembled in frame  
Frame number  
This H.223 AL-PDU packet is reassembled in this frame

h223.al1 H.223 AL1  
No value  
H.223 AL-PDU using AL1

h223.al1.framed H.223 AL1 framing  
Boolean

h223.al2 H.223 AL2  
Boolean  
H.223 AL-PDU using AL2

h223.al2.crc CRC  
Unsigned 8-bit integer  
CRC

h223.al2.crc\_bad Bad CRC  
Boolean

h223.al2.seqno Sequence Number  
Unsigned 8-bit integer  
H.223 AL2 sequence number

h223.mux H.223 MUX-PDU  
No value  
H.223 MUX-PDU

h223.mux.correctedhdr Corrected value  
Unsigned 24-bit integer  
Corrected header bytes

h223.mux.deactivated Deactivated multiplex table entry  
No value  
mpl refers to an entry in the multiplex table which is not active

h223.mux.extra Extraneous data  
No value  
data beyond mpl

h223.mux.fragment H.223 MUX-PDU Fragment  
Frame number  
H.223 MUX-PDU Fragment

h223.mux.fragment.error Defragmentation error  
Frame number  
Defragmentation error due to illegal fragments

h223.mux.fragment.multipletails Multiple tail fragments found  
Boolean  
Several tails were found when defragmenting the packet

```
h223.mux.fragment.overlap  Fragment overlap
    Boolean
    Fragment overlaps with other fragments
h223.mux.fragment.overlap.conflict  Conflicting data in fragment overlap
    Boolean
    Overlapping fragments contained conflicting data
h223.mux.fragment.toolongfragment  Fragment too long
    Boolean
    Fragment contained data past end of packet
h223.mux.fragments  H.223 MUX-PDU Fragments
    No value
    H.223 MUX-PDU Fragments
h223.mux.hdlc  HDLC flag
    Unsigned 16-bit integer
    framing flag
h223.mux.header  Header
    No value
    H.223 MUX header
h223.mux.mc  Multiplex Code
    Unsigned 8-bit integer
    H.223 MUX multiplex code
h223.mux.mpl  Multiplex Payload Length
    Unsigned 8-bit integer
    H.223 MUX multiplex Payload Length
h223.mux.rawhdr  Raw value
    Unsigned 24-bit integer
    Raw header bytes
h223.mux.reassembled_in  MUX-PDU fragment, reassembled in frame
    Frame number
    This H.223 MUX-PDU packet is reassembled in this frame
h223.mux.stuffing  H.223 stuffing PDU
    No value
    Empty PDU used for stuffing when no data available
h223.mux.vc  H.223 virtual circuit
    Unsigned 16-bit integer
    H.223 Virtual Circuit
h223.non-h223  Non-H.223 data
    No value
    Initial data in stream, not a PDU
h223.sequenced_al2  H.223 sequenced AL2
    No value
    H.223 AL-PDU using AL2 with sequence numbers
h223.unsequenced_al2  H.223 unsequenced AL2
    No value
    H.223 AL-PDU using AL2 without sequence numbers
```

**ITU-T Recommendation H.261 (h261)**

h261.ebit End bit position  
Unsigned 8-bit integer

h261.gobn GOB Number  
Unsigned 8-bit integer

h261.hmvd Horizontal motion vector data  
Unsigned 8-bit integer

h261.i Intra frame encoded data flag  
Boolean

h261.mbap Macroblock address predictor  
Unsigned 8-bit integer

h261.quant Quantizer  
Unsigned 8-bit integer

h261.sbit Start bit position  
Unsigned 8-bit integer

h261.stream H.261 stream  
Byte array

h261.v Motion vector flag  
Boolean

h261.vmvd Vertical motion vector data  
Unsigned 8-bit integer

**ITU-T Recommendation H.263 (h263data)****ITU-T Recommendation H.263 RTP Payload header (RFC2190) (h263)**

h263.PB\_frames\_mode H.263 Optional PB-frames mode  
Boolean  
Optional PB-frames mode

h263.advanced\_prediction Advanced prediction option  
Boolean  
Advanced Prediction option for current picture

h263.cpm H.263 Continuous Presence Multipoint and Video Multiplex (CPM)  
Boolean  
Continuous Presence Multipoint and Video Multiplex (CPM)

h263.custom\_pcf H.263 Custom PCF  
Boolean  
Custom PCF

h263.dbq Differential quantization parameter  
Unsigned 8-bit integer  
Differential quantization parameter used to calculate quantizer for the B fr

h263.document\_camera\_indicator H.263 Document camera indicator  
Boolean  
Document camera indicator

h263.ebit End bit position  
Unsigned 8-bit integer  
End bit position specifies number of least significant bits that shall be ig

h263.ext\_source\_format H.263 Source Format  
Unsigned 8-bit integer  
Source Format

h263.ftype F  
Boolean  
Indicates the mode of the payload header (MODE A or B/C)

h263.gbsc H.263 Group of Block Start Code  
Unsigned 32-bit integer  
Group of Block Start Code

h263.gn H.263 Group Number  
Unsigned 32-bit integer  
Group Number, GN

h263.gobn GOB Number  
Unsigned 8-bit integer  
GOB number in effect at the start of the packet.

h263.hmv1 Horizontal motion vector 1  
Unsigned 8-bit integer  
Horizontal motion vector predictor for the first MB in this packet

h263.hmv2 Horizontal motion vector 2  
Unsigned 8-bit integer  
Horizontal motion vector predictor for block number 3 in the first MB in this packet

h263.mba Macroblock address  
Unsigned 16-bit integer  
The address within the GOB of the first MB in the packet, counting from zero

h263.opptype H.263 Optional Part of PLUSPTYPE  
Unsigned 24-bit integer  
Optional Part of PLUSPTYPE

h263.opt\_unres\_motion\_vector\_mode H.263 Optional Unrestricted Motion Vector mode  
Boolean  
Optional Unrestricted Motion Vector mode

h263.optional\_advanced\_prediction\_mode H.263 Optional Advanced Prediction mode  
Boolean  
Optional Advanced Prediction mode

h263.payload H.263 payload  
No value  
The actual H.263 data

h263.pbframes p/b frame  
Boolean  
Optional PB-frames mode as defined by H.263 (MODE C)

h263.pei H.263 Extra Insertion Information (PEI)  
Boolean  
Extra Insertion Information (PEI)

h263.picture\_coding\_type Inter-coded frame  
Boolean  
Picture coding type, intra-coded (false) or inter-coded (true)

h263.pquant H.263 Quantizer Information (PQUANT)  
Unsigned 32-bit integer  
Quantizer Information (PQUANT)

h263.psc H.263 Picture start Code  
Unsigned 32-bit integer  
Picture start Code, PSC

h263.psi H.263 Picture Sub-Bitstream Indicator (PSBI)  
Unsigned 32-bit integer  
Picture Sub-Bitstream Indicator (PSBI)

h263.psupp H.263 Supplemental Enhancement Information (PSUPP)  
Unsigned 32-bit integer  
Supplemental Enhancement Information (PSUPP)

h263.quant Quantizer  
Unsigned 8-bit integer  
Quantization value for the first MB coded at the starting of the packet.

h263.r Reserved field  
Unsigned 8-bit integer  
Reserved field that hould contain zeroes

h263.rr Reserved field 2  
Unsigned 16-bit integer  
Reserved field that should contain zeroes

h263.sbit Start bit position  
Unsigned 8-bit integer  
Start bit position specifies number of most significant bits that shall be i

h263.source\_format H.263 Source Format  
Unsigned 8-bit integer  
Source Format

h263.split\_screen\_indicator H.263 Split screen indicator  
Boolean  
Split screen indicator

h263.srcformat SRC format  
Unsigned 8-bit integer  
Source format specifies the resolution of the current picture.

h263.stream H.263 stream  
Byte array  
The H.263 stream including its Picture, GOB or Macro block start code.

h263.syntax\_based\_arithmetic Syntax-based arithmetic coding  
Boolean  
Syntax-based Arithmetic Coding option for current picture

h263.syntax\_based\_arithmetic\_coding\_mode H.263 Optional Syntax-based Arithmetic  
Boolean  
Optional Syntax-based Arithmetic Coding mode

h263.tr Temporal Reference for P frames  
Unsigned 8-bit integer  
Temporal Reference for the P frame as defined by H.263

h263.tr2 H.263 Temporal Reference  
Unsigned 32-bit integer  
Temporal Reference, TR

h263.trb Temporal Reference for B frames  
Unsigned 8-bit integer  
Temporal Reference for the B frame as defined by H.263

h263.ufep H.263 Update Full Extended PTYPE  
Unsigned 16-bit integer  
Update Full Extended PTYPE

h263.unrestricted\_motion\_vector Motion vector  
Boolean  
Unrestricted Motion Vector option for current picture

h263.vmv1 Vertical motion vector 1  
Unsigned 8-bit integer  
Vertical motion vector predictor for the first MB in this packet

h263.vmv2 Vertical motion vector 2  
Unsigned 8-bit integer  
Vertical motion vector predictor for block number 3 in the first MB in this

**ITU-T Recommendation H.263 RTP Payload header (RFC4629) (h263p)**

h263P.PSC H.263 PSC  
Unsigned 16-bit integer  
Picture Start Code(PSC)

h263P.extra\_hdr Extra picture header  
Byte array  
Extra picture header

h263P.p P  
Boolean  
Indicates (GOB/Slice) start or (EOS or EOSBS)

h263P.payload H.263 RFC4629 payload  
No value  
The actual H.263 RFC4629 data

h263P.pebit PEBIT  
Unsigned 16-bit integer  
number of bits that shall be ignored in the last byte of the picture header

h263P.plen PLEN  
Unsigned 16-bit integer  
Length, in bytes, of the extra picture header

h263P.rr Reserved  
Unsigned 16-bit integer  
Reserved SHALL be zero

h263P.s S  
Unsigned 8-bit integer  
Indicates that the packet content is for a sync frame

h263P.tid Thread ID  
Unsigned 8-bit integer  
Thread ID

h263P.tr H.263 Temporal Reference  
Unsigned 16-bit integer  
Temporal Reference, TR

h263P.trun Trun  
Unsigned 8-bit integer  
Monotonically increasing (modulo 16) 4-bit number counting the packet number

h263P.v V  
Boolean  
presence of Video Redundancy Coding (VRC) field

**InMon sFlow (sflow)**

sflow.dstAS AS Destination  
Unsigned 32-bit integer  
Autonomous System destination

sflow.dstASentries AS Destinations  
Unsigned 32-bit integer  
Autonomous System destinations

sflow.extended\_information\_type Extended information type  
Unsigned 32-bit integer  
Type of extended information

sflow.header Header of sampled packet  
Byte array  
Data from sampled header

sflow.header\_protocol Header protocol  
Unsigned 32-bit integer  
Protocol of sampled header

sflow.ifdirection Interface Direction  
Unsigned 32-bit integer  
Interface Direction

sflow.ifinbcst Input Broadcast Packets  
Unsigned 32-bit integer  
Interface Input Broadcast Packets

sflow.ifindex Interface index  
Unsigned 32-bit integer  
Interface Index

sflow.ifindisc Input Discarded Packets  
Unsigned 32-bit integer  
Interface Input Discarded Packets

```
sflow.ifinerr  Input Errors
               Unsigned 32-bit integer
               Interface Input Errors

sflow.ifinmcast  Input Multicast Packets
                Unsigned 32-bit integer
                Interface Input Multicast Packets

sflow.ifinoct  Input Octets
              Unsigned 64-bit integer
              Interface Input Octets

sflow.ifinpkt  Input Packets
              Unsigned 32-bit integer
              Interface Input Packets

sflow.ifinunk  Input Unknown Protocol Packets
              Unsigned 32-bit integer
              Interface Input Unknown Protocol Packets

sflow.ifoutbcast  Output Broadcast Packets
                 Unsigned 32-bit integer
                 Interface Output Broadcast Packets

sflow.ifoutdisc  Output Discarded Packets
                Unsigned 32-bit integer
                Interface Output Discarded Packets

sflow.ifouterr  Output Errors
               Unsigned 32-bit integer
               Interface Output Errors

sflow.ifoutmcast  Output Multicast Packets
                 Unsigned 32-bit integer
                 Interface Output Multicast Packets

sflow.ifoutoct  Output Octets
               Unsigned 64-bit integer
               Interface Output Octets

sflow.ifoutpkt  Output Packets
               Unsigned 32-bit integer
               Interface Output Packets

sflow.ifpromisc  Promiscuous Mode
                Unsigned 32-bit integer
                Interface Promiscuous Mode

sflow.ifspeed  Interface Speed
              Unsigned 64-bit integer
              Interface Speed

sflow.ifstatus  Interface Status
              Unsigned 32-bit integer
              Interface Status

sflow.iftype  Interface Type
             Unsigned 32-bit integer
             Interface Type

sflow.localpref  localpref
                Unsigned 32-bit integer
                Local preferences of AS route
```

```
sflow.nexthop  Next hop
  IPv4 address
  Next hop address

sflow.nexthop.dst_mask  Next hop destination mask
  Unsigned 32-bit integer
  Next hop destination mask bits

sflow.nexthop.src_mask  Next hop source mask
  Unsigned 32-bit integer
  Next hop source mask bits

sflow.numsamples  NumSamples
  Unsigned 32-bit integer
  Number of samples in sFlow datagram

sflow.packet_information_type  Sample type
  Unsigned 32-bit integer
  Type of sampled information

sflow.peerAS  AS Peer
  Unsigned 32-bit integer
  Autonomous System of Peer

sflow.pri.in  Incoming 802.1p priority
  Unsigned 32-bit integer
  Incoming 802.1p priority

sflow.pri.out  Outgoing 802.1p priority
  Unsigned 32-bit integer
  Outgoing 802.1p priority

sflow.samplertype  sFlow sample type
  Unsigned 32-bit integer
  Type of sFlow sample

sflow.sequence_number  Sequence number
  Unsigned 32-bit integer
  sFlow datagram sequence number

sflow.srcAS  AS Source
  Unsigned 32-bit integer
  Autonomous System of Source

sflow.sub_agent_id  Sub-agent ID
  Unsigned 32-bit integer
  sFlow sub-agent ID

sflow.sysuptime  SysUptime
  Unsigned 32-bit integer
  System Uptime

sflow.version  datagram version
  Unsigned 32-bit integer
  sFlow datagram version

sflow.vlan.in  Incoming 802.1Q VLAN
  Unsigned 32-bit integer
  Incoming VLAN ID

sflow.vlan.out  Outgoing 802.1Q VLAN
  Unsigned 32-bit integer
  Outgoing VLAN ID
```

**InfiniBand (infiniband)**

infiniband.aeth ACK Extended Transport Header  
Byte array

infiniband.aeth.msn Message Sequence Number  
Unsigned 24-bit integer
